PREFACES

P. W. R. Homfray

It is a privilege to contribute a preface on behalf of Radio Australia for this 21st Anniversary Edition. WRTH continues to provide broadcasters throughout the world with the most comprehensive and up-to-date information on all aspects of radio and television development; it is an invaluable reference book.

WRTH is one of Radio Australia's meeting points with other short wave broadcasters. I would like to take this opportunity of giving your readers some idea of our approach to broadcasting.

Firstly, when we say that Radio Australia is the "Voice of Australia" we mean it in a very special sense. Although financed by the Government, Radio Australia is not a department of the Government. It is the Overseas Service of the Australian Broadcasting Commission which is a body set up under a Federal Act to provide comprehensive programmes in radio and television throughout Australia.

The Commission formulates the policies under which all its programmes are presented, both at home and overseas.

The Government view on different controversies is presented but not in a vacuum as if it were the only view in Australia.

Radio Australia's news bulletins and its programmes of comment reflect the fact that there are differences of opinion in Australia and that debate is a vital element in our national life.

Radio Australia's news service is the most quoted radio news source in South-East Asia – a great tribute to its reliability. Over the years we have built up a reputation for detached reporting – and our success depends on that reputation being maintained.

Each day Radio Australia broadcasts 46 news bulletins – 31 in English, 6 in Indonesian, 2 in Mandarin, 3 in French and 1 each in Cantonese, Vietnamese, Thai and Japanese. The bulletins are prepared by the Australian Broadcasting Commission's news staff using overseas cable services and its own network of staff correspondents. The A.B.C. maintains staff representatives in Singapore, Kuala Lumpur, Djakarta, Saigon, Delhi, Tokyo, London and New York.

Talks programmes are an important feature of Radio Australia's broadcasting, providing up-to-the-minute background for world news in programmes entitled "News Focus" and "Commentary"; also presenting a broad picture of Australian life in "This Australia" and "The Creative Arts" programmes.

"News Focus" is a news-magazine style programme, based primarily on voiced reports from the A.B.C.'s own overseas representatives. "Commentary" is given by a panel of independent commentators – usually journalists or academics.

Entertainment is also a vital part of our programming, with such shows as "Listeners' Choice", "Listeners' Mailbag" and lively personality programmes. "Listeners' Choice" is a programme of request music featured daily in English-language and all foreign-language broadcasts. "Listeners' Mailbag" is Radio Australia's "Encyclopaedia of the Air" in which listeners' questions are answered on air.

Another big source of letters is requests for the free booklets which accompany Radio Australia's popular English-language teaching programmes for Indonesians – "English for You" – and Thais – "English for Thailand".

It is impossible to know exactly how many listeners Radio Australia has. There is evidence that the number runs to tens of millions, the majority of them living in Australia's near north – in South and South-East Asia.

Radio Australia broadcasts 55 hours a day – 41½ in English, 5½ in Indonesian, 2 each in Mandarin and French and 1 each in Thai, Vietnamese, Cantonese and Japanese.

There is a strong emphasis on broadcasts to Asia, Africa and the Pacific, with a specialised news coverage for these areas.

The reason for this emphasis is that these countries are our nearest neighbours and most of our listeners live there.

However, our message does go right around the world. We have regular listeners in the United States, Denmark, Norway, Sweden, the United Kingdom, Germany, the West Indies, and a dozen other countries. Like our nearer-to-home listeners, they have come to regard Radio Australia as a friend. They keep us in touch with their family news and send us pictures of their activities.

Mail comes into our office in Melbourne with souvenirs from overseas listeners: perhaps a home-town photograph from a listener in Denmark, a necklace of shells from a girl in the Pacific Islands, or a photograph from a seaman showing us his cabin with a short-wave set by the bunk.

Apart from our integrity as a source of reliable information about world events, it is this warm relationship with our listeners which we most value.

Our listeners know our announcers. They write to them and get replies from them. We send out fan cards by the score.

So Radio Australia means different things to different people. To some it is a lifeline of accurate news, to others it is an encyclopaedia of the air or a way of keeping up-to-date with the best in music, modern or classical. To others still, it is a friendly voice they like to hear. Perhaps it is all these things to many, because that is our aim.

P. W. R. HOMFRAY
Director of Radio Australia

Hans Otto Wesemann

When the Deutsche Welle was first mentioned in the "World Radio and TV Handbook", the title of this extremely useful reference book did not include the "TV", and the modest beginnings of the Deutsche Welle were just a year old. That was in 1954. Since then, both the "World Radio and TV Handbook" and the Deutsche Welle have each in their own way expanded considerably. It is not for me to describe here the progress made in the intervening period by the Deutsche Welle; this can be

neumann condenser microphones

COMPLETE STEREO AND MONO DISK CUTTING EQUIPMENT

TRANSISTOR MIXING CONSOLES

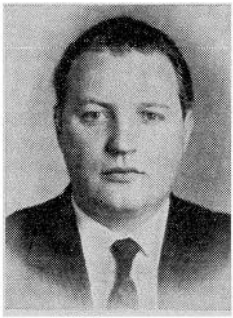
Write for details on our complete manufacturing program

retraced by referring to the appropriate pages in the Handbook itself. I should add, however, that the last three years have been particularly important in the development of the Deutsche Welle. The foreign language programmes have been extended appreciably, the transcription service has grown and now supplies recordings to a large number of countries, the German language series "Lernt Deutsch bei der Deutschen Welle" is now available in 14 languages, and a relay station has gone into operation.

Outwardly there have been quite a few changes. However, the aim of the Deutsche Welle has remained the same – to present an undistorted picture of all aspects of life in the Federal Republic of Germany. That this is now being done in a wide variety of foreign languages is part of the endeavour to promote international understanding. Understanding presupposes knowledge. Knowledge of one's partner in conversation, which is the role in which we cast ourselves vis-à-vis our listeners, is best obtained from him himself.

The importance attached in this connection to the modern means of communications throughout the world and the efforts being made to reach and converse with the listener, wherever he may live – this is reflected on every page of the "World Radio and TV Handbook".

Dr. HANS OTTO WESEMANN
Intendant, Deutsche Welle, Köln



M. Monusov
Head of International Relations Department
Soviet Radio and Television

The Russian people used to say: "The road is twice as long with a silent companion". Today this proverb only holds true if you have forgotten your transistor radio at home, or neglect to turn on the set beside you. You won't be annoyed at having a bore or a clam beside you if you tune in to Radio Moscow. No matter what your mood, intellectual requirements or professional interests, you'll always find something to suit you in our programs.

We keep our listeners informed about events in their own and other countries; run preparatory courses for those wishing to enter college; and organize music appreciation programs, foreign language lessons and talks on space research. Listeners are prompt to remind us if we leave something out in drawing up our programs. We receive tens of thousands of letters from listeners in the Soviet Union and abroad, for Radio Moscow beams broadcasts in 55 languages to other countries. So much for our relation with our listeners.

Now for our business relations with radio and TV stations in other lands. We exchange radio programs with 130 stations in 83 countries; 65 tv stations in 55 countries use our tv programs. Our colleagues in the United States, Canada, Britain, France and a host of other countries come to Moscow to swap experiences, agree on exchanges of programs and personnel and broaden the sphere of cooperation.

The Soviet Committee for Radio and Television is a member of the International Radio and Television Organization – OIRT. Because of its extensive correspondence, our international department has constant need of information of all sorts and finds the World Radio TV Handbook invaluable. It contains much useful information and helps us in making business contacts which often develop into friendly relations. To my mind, those who help people to work and be friends are engaged in a very useful and humane function. It is why we are grateful to the compilers of this excellent Handbook.

M. MONUSOV
Head of International Relation Department
Soviet Radio and Television

Eino S. Repo

As a matter of fact it was the television which brought about the lively intercourse between nations in the area of the media of communications in the ether. This intercourse has now reached such dimensions that we are constantly in need of information on radio and television organisations very far from our country. The sound radio, which before the marching forth of the television was not able to use, even nearly to the full, all the possibilities to be found in the international programme production and the technical development, is at present enjoying, as a good second, the international company.

Only ten years ago very few people could foresee the highly developed international collaboration in programme activities that now belongs to our daily experiences and where the WORLD RADIO TV HANDBOOK is of valuable assistance. As far as Finland is concerned, the collaboration with other countries is exceptionally frequent and solid; the Yleisradio is a member not only of the EBU but also of the OIRT and closely connected with the Scandinavian broadcasting organisations, thus participating in Eurovision, Intervision and Nordvision. In my opinion the internationalism in the field of programme activities will make still further progress, and as soon as the existing prejudices break down, it will be of global significance.

EINO S. REPO
Director-General, Finnish Broadcasting Co.

Rosel H. Hyde

The World Radio TV Handbook is a publication which has developed rapidly into one of the leading and most often consulted authorities on world-wide broadcasting activities. The comprehensive treatment given AM, FM and TV stations makes this publication a valued and respected source of information by providing readily understandable and necessary facts to tune in stations of almost all countries. The Handbook thereby provides the opportunity for its users to share in the cultures of many nations and plays a significant role in promoting better international understanding.

ROSEL H. HYDE

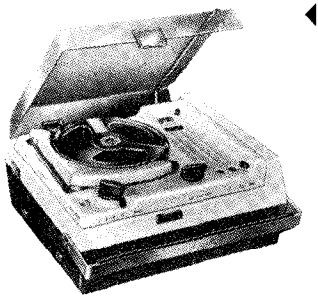
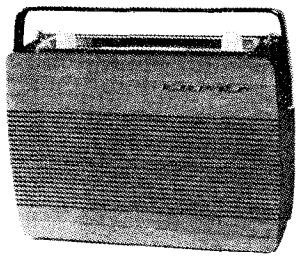
New advanced Line in Music Entertainment



MULTICORDER

This portable transistorized tape recorder has entirely new constructions in elegant design. 1 knob for immediate choice of 4 programmes. Single reel. 12 hours playing time. Supreme HiFi quality of tone. Battery operated and outlets for mains adaptor. For use everywhere, also in cars.

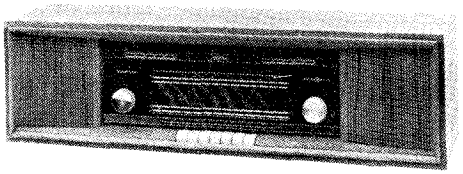


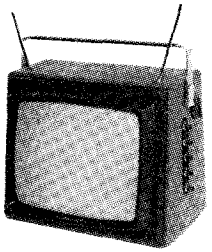
KURER FM DE LUXE in teak

This elegant portable AM/FM model has 4 wavebands. Highest sensitivity and selectivity are the features. Stable reception on FM with AFC. Outlets for mains adaptor, extra speakers and earphones. Special combined models for cars available. Smart cabinets in teak, palisander, black/nickel and pastel colours.

SYMPHONY STEREO

This handsome designed table model has 5 wavebands incl. FM. Two STEREO amplifiers of 2 × 10 Watts output give excellent quality of tone. Transistors and tubes, 4 highly efficient loudspeakers ensure a genuine reproduction of Stereophonic Sound. Tone selector key board. Outlets for pickup, extra speaker etc. Outlets for MPX. A special section model also available with extra speaker cabinets, designed to fit into shelf sections. The SYMPHONY STEREO table model can be converted into a smart floor model, incorporating a high quality record-player in a drawer.

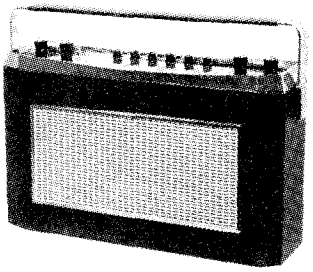




KURER 11" portable fully transistorized TV

This compact TV of highest quality in elegant teak cabinet is built for especially difficult reception conditions. Gives sharp picktures and brilliant sound reproduction, in the home, on the beach, whereever you are. Mains/battery operated.

EXPLORER



This is a highly sensitive, portable, battery-operated AM-radio with 3 shortwaves plus medium and long. An all over the world radio receiver.

EXPLORER is beautifully finished in a vinylite covered wooden cabinet - to give the best possible sound reproduction. It has 2 built-in highly effective loop antennas for shortwave bands and ferrite antenna for long- and medium. Great sensitivity, which makes it possible to take in faraway stations. Separate, continuous bass and treble controls. Dial lamps. Outlets for extra loudspeaker, pickup, antenna and ground. Outlet also for battery eliminator for AC mains operation. Modern printed circuit chassis with large speaker gives clear and powerful output.
5 wavebands: Shortwave III 11-29,5 Mc - Shortwave II 5,3-14,5 Mc - Shortwave I (Marine) 1,7-5,2 Mc - Medium wave 510-1630 Kc - Longwave 150-390 Kc.
Weight: 1,8 kilos + batteries - Special model with FM band is also available.

RADIONETTE has 40 years of experience on technical improvements of highest quality. The production line consists of portable radios, table- and console models, TV, tape recorders, amplifiers and mini-jukeboxes – all models great news for music lovers. Exports to 60 countries. Developped and produced by RADIONETTE, Norway.

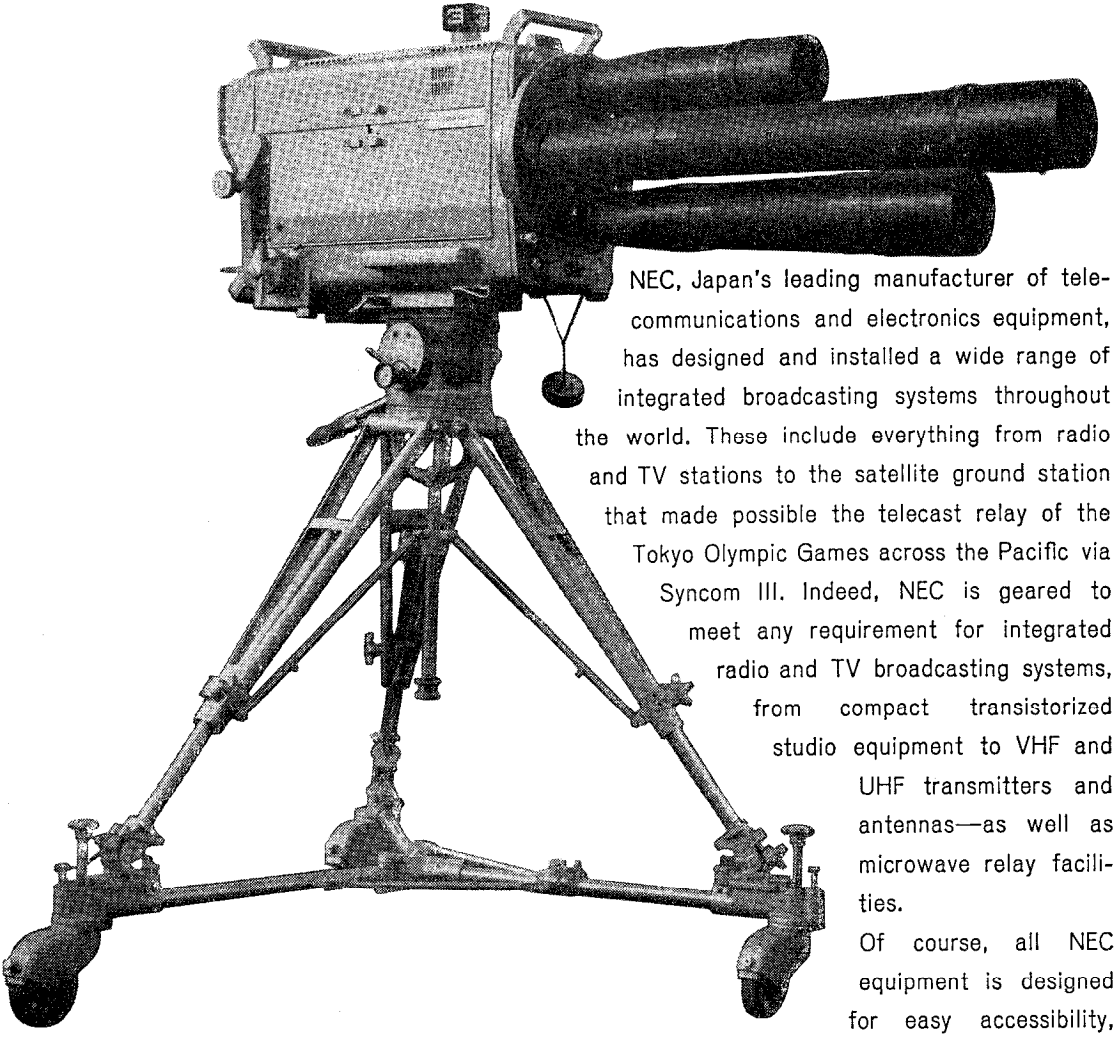
NEC's wide range of integrated broadcasting systems—geared to meet any demand anywhere!



NEC, Japan's leading manufacturer of telecommunications and electronics equipment, has designed and installed a wide range of integrated broadcasting systems throughout the world. These include everything from radio and TV stations to the satellite ground station that made possible the telecast relay of the Tokyo Olympic Games across the Pacific via Syncom III. Indeed, NEC is geared to meet any requirement for integrated radio and TV broadcasting systems, from compact transistorized studio equipment to VHF and UHF transmitters and antennas—as well as microwave relay facilities.

Of course, all NEC equipment is designed for easy accessibility, simple maintenance and minimum power consumption. It meets the highest international broadcast standards of signal quality, stability and reliability such as FCC, CCIR, etc. At present, sixty percent of the more than seven hundred eighty radio stations in Japan are supplied with NEC equipment.

Products for today—

Norway - 2 SW transmitters 120 kW

Why station owners – all over the world – choose their equipment from the PHILIPS range

They do so for some very good reasons:

- Philips' reputation for reliability and after-sales service, maintained since the earliest days of radio (our first broadcast went on the air in 1923, our TV experiments date back to 1935).
- Philips engineers survey, plan and install the entire system, whether it consists of a simple audio amplifier or a complete TV network. And whether the site is on the equator - e.g. Quito, Ecuador - or within the polar circle - like the FM and TV station at Kiruna in Sweden.
- Philips equipment covers the complete range from microphone to broadcast transmitter, from TV camera to aerial, from line amplifier to radio link.

HOW TO USE THE WORLD RADIO TELEVISION HANDBOOK

The World Radio TV Handbook is designed to help the international radio listener obtain maximum enjoyment from his receiver.

The first section of the Handbook contains instructive articles relating to broadcasting, information regarding broadcasting and television organizations, and popular technical articles and tables of practical value to listeners.

The main section of the book (pages 85–241) contains detailed information, by country, of the **Radio Stations** and broadcasting organizations of every country in the world, including names and addresses of broadcasting companies, names and titles of leading officials, lists of broadcasting stations in each country, including frequencies, wavelengths, transmitter power, call signs (if used), and station names. Program information is also listed, including times, frequencies, and beam areas of the broadcasts in each language. The announced **location** of the st., rel. st's exc., is usually the studio and administrative location, since the tr's are often located in outlying areas. – **Power** is stated in kilowatt (kW) or Watt (W). When two powers are listed, the figures represent the lower and upper limits of power, where a station uses more than one tr. on the frequency at different times (s.w.) or varies the power of the tr. for day and night operation (m.w.).

A **listing by frequency and wavelength** of the shortwave stations of the world, and long and medium wave stations of Europe, North Africa, Near East is presented in the last part of the Handbook, for use in facilitating the identification of stations.

Abbreviations: See page 68 for explanation.

Short-wave stations may be used either for domestic broadcasting to listeners in the same country or for international broadcasting directed to listeners in other countries.

International short-wave stations usually employ directional antennas to beam their programs to particular areas on frequencies calculated for best reception. Most international broadcasts are scheduled for the evening hours in the intended reception area, but some are in the morning or at other times during the day. The reception areas give their names to the services: European Service (or to Europe), Far Eastern Service (or to Far East), North American Service (or to North America) etc. Languages employed are those of the listeners in the area to which the broadcast is directed, also the language of the transmitting country for reception by persons understanding that language.

Best reception is usually obtained from transmissions directed to your area. However, there is a considerable amount of overlapping between many service areas and, therefore, it is often possible to obtain good reception of programs beamed to adjacent areas, and sometimes, even of programs directed to distant parts of the world. Shortwave propagation conditions change continually because of the influence of daylight and darkness, seasonal effects and solar activity. Consequently, good reception requires frequency change from time to time.

(See articles: "Radio Broadcast Reception Conditions", "Solar Activity", "Shortwave Radio & the Ionosphere" on the respective pages).

Domestic short-wave stations are usually of lower power than international stations, and generally use non-directional or wide beam antennas, in order to reach local or national audiences. These stations make fewer seasonal frequency changes, and many operate on the same channel for both day and night operation. The stations are utilized to reach areas of a country where coverage by medium and long wave stations is not adequate.

Long and Medium wave stations are used mainly for transmitting programs to listeners in the country in which the stations are located. These stations vary from powerful transmitters capable of being heard throughout the country to low power stations intended only for a small area in the vicinity of the transmitter.

FM (Frequency Modulation) Stations operate on very high frequencies (VHF); ranges of 88-108 Mc in the Americas and 87-100 Mc in other areas, and provide interference-free reception over a short radius. Most FM stations relay programs of a medium or long wave station.

Frequency and Wavelength – Frequencies are measured in kilocycles per second (kc/s) and megacycles per second (Mc/s). A kilocycles is 1000 cycles. A megacycles is 1000 kilocycles. Wavelengths are measured in meters.

A formula between frequency and wavelength is as follows: Frequency (kc/s) $\times$ Wavelength (m) = 300000. Wavelength (m) $= \frac{300000}{\text{Frequency (kc/s)}}$ and Frequency (kc/s) $= \frac{300000}{\text{Wavelength (m)}}$.

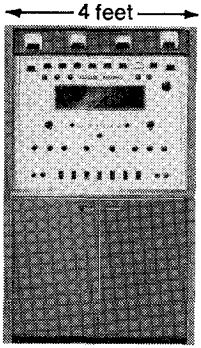
Several broadcasting stations announce frequencies in "Kilohertz (kHz)". "One Hertz" (named after the German physicist Heinrich Hertz) signifies "one cycle per second" and, accordingly, one Kilohertz (kHz) equals one Kilocycle per second (kc/s).

Due to the propagational conditions, interference by other stations, jamming, malfunction of transmitter, reallocation of frequencies by a country or convention, or for some other reason, stations may use frequencies which are at variance with the frequency(ies) indicated in this handbook.

Program times used in the listings are based on the 24 hour clock. Midnight is 00.00 hours, 3 a.m. is 03.00 hours, 9 a.m. is 09.00 hours, and midday is 12.00 hours. Then, instead of starting another 12 hour cycle (p.m.), under the 24 hour system the hours increase until midnight. Thus 3 p.m. is 15.00 hours, 10 p.m. is 22.00 hours, and so on until 23.59 (11.59 p.m.) is reached and a new 24-hour cycle starts. This system eliminates any confusion between times a.m. and p.m.

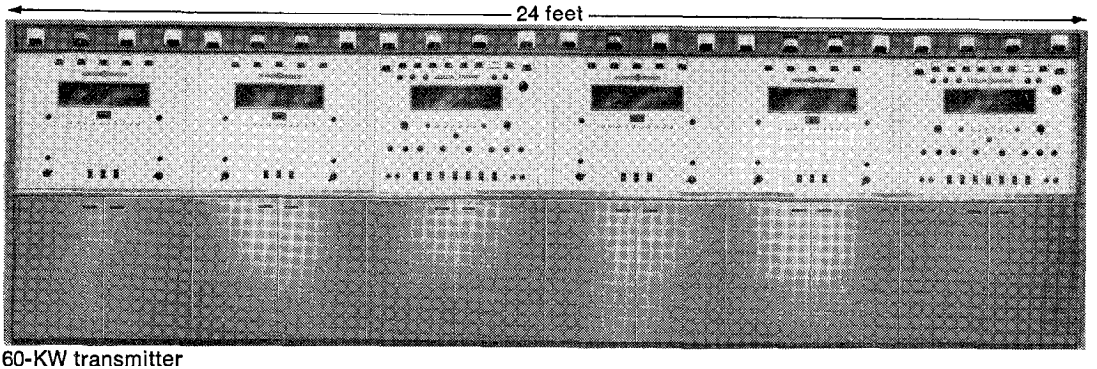
Time Conversion: All programs are listed in GMT (Greenwich Mean Time). To convert from GMT to your local time, refer to the World Time Table on page 70 to determine how many hours your time is ahead or behind GMT, and add or subtract that amount in order to convert to your clock time. For quick conversion, it is useful to write the GMT hours, 00 to 24, down on one side of a sheet of paper, and then enter the correct local time opposite each GMT hour. Summer time or Daylight Saving time, adds an hour to local time, so this should be taken into account in countries where it is utilized.

Program schedules: The program schedules of many countries are divided into Home Services and Foreign Services. The Home Service programs are arranged by language and by program services or networks. The Foreign Service transmissions are generally arranged by beam area, and by language for each beam area. The times and frequencies of the programs in each language are listed together, in order to facilitate the determination of the times and frequencies of the broadcasts in each language.



1-KW driver module

Start with this compact General Electric 1-KW transmitter.



60-KW transmitter

Add matching modules to meet your future VHF-TV needs.

The building-block design of General Electric transmitters and amplifiers lets you keep pace with your increasing power needs. Simply by adding matched modules you can increase the power of your 1-KW transmitter to 5, 10, 30 or even 60 KW.

For example, combine the 1-KW transmitter with a 10-KW visual-and-aural amplifier and a 30-KW visual amplifier to create a 30-KW transmitter. Parallel two 30-KW transmitters for the six-module, 60-KW version shown. It's only 24 feet long—substantially more compact than competitive modules.

G.E.'s full line of VHF transmitters is designed for color and monochrome operation—all with remote-control capabilities. And all are air-cooled.

For more information on these new G.E. transmitters or on any other part of General Electric's complete television package—cameras, studio equipment, antennas—contact your G.E. representative. *General Electric Company, Dept. 43-11 TVH, 159 Madison Ave., New York, N.Y. 10016, U.S.A.*

Trademark

HOW TO USE *(continued from page 12)*

Therefore, if you wish to hear a broadcast in a particular language from a country, refer to the listing for that country of the time and frequency of broadcasts in that language. Most broadcasts are transmitted on more than one frequency, so try the various frequencies listed, to determine which one is received best at your location.

Identification of Stations: Most stations in Europe, Middle East, Africa and Asia identify by announcing their station name and location. Most stations in North America and Pacific (incl. Australia/New Zealand) identify by the use of a call sign of three to five letters or a combination of letters and figures, of which the first, or first two, denote the nationality in accordance with the international list of prefixes. Most stations in Latin America use a call sign (sometimes not frequently announced), a station name, and location.

In addition, many stations use musical interval signals at sign on and between programs, in order to help listeners to find the station on their dial and identify it as the desired station. These interval signals are included in the country listings.

How to identify a Station by Frequency or Wavelength: When you hear a station that is unknown to you, first try to determine some clue to its identity by attempting to determine the language, noting the type of program, etc. Then, note the approximate frequency or wavelength indicated on your dial, and turn to the table "Short-wave Stations of the World" in the back of the Handbook, and ascertain what stations operate in that vicinity. Next, check the program listings to determine which of the stations are scheduled to operate at that time of day, and which are most likely to be audible at your location, depending on the power and distance away. For definite confirmation, it is desirable to wait for station announcement or interval signal.

Frequency Changes: The frequencies listed are those which were scheduled for use at the time of publication. However, due to a number of reasons, including interference and changes in propagation conditions, it may be necessary for a country to make frequency changes. Often only one of the frequencies on a program will be changed, so the new frequency can be determined by tuning in the other frequencies and listening for the announcement of the frequencies being used. Reference to a publication listing the latest frequency changes for the International Stations: the **Summer-Supplement to the WRTH** (published by mid June each year) or a monthly short-wave listeners publication issued in your country, is also helpful.

Interference: Due to the present crowded condition of the medium and short wave broadcasting bands, interference may be encountered from other stations operating on the same or closely adjacent frequency. In addition to interference from other broadcast stations, there may also be interference from "jammers", which transmit a variety of noises in an attempt to prevent certain foreign broadcasts from being heard in the country operating the jammers. When interference is encountered, try another of the listed or announced frequencies, if several are in use, or try a broadcast at another time.

Reception from Hard-to-Hear Countries: If you wish to hear a station or program from a particular country, refer to the listing from that country, determining first whether it has any broadcasts beamed towards your area or adjacent areas, if not, refer to the frequency, time and power listing to determine where and when reception might be possible. Also, note the bands and times when stations in other countries in that part of the world are audible. It is possible to hear many far distant stations, even if they do not beam programs to your area, by listening when the propagation and clearness of channel conditions are favorable.

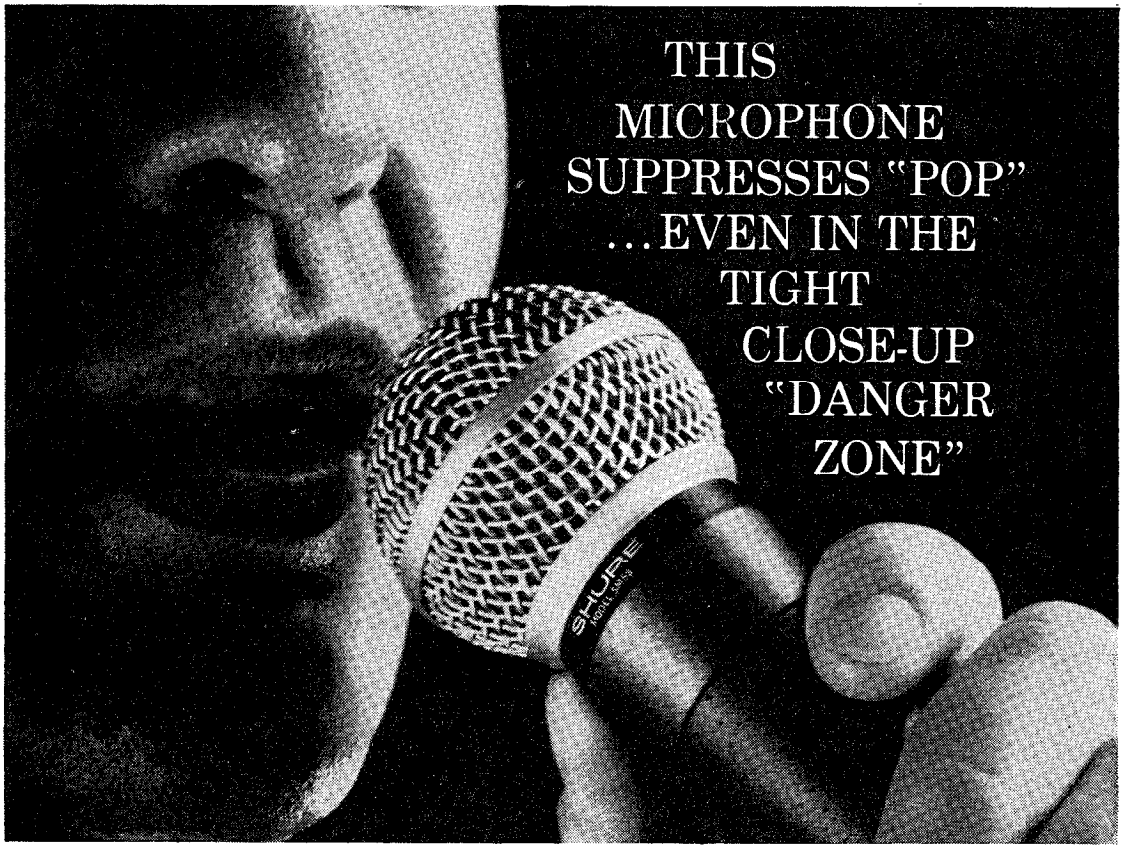
Verification by QSL-cards: As indicated in the program listings for the various countries, many stations are interested in receiving reports from listeners about their transmissions. These stations acknowledge reports by sending listeners a QSL card (verification) or letter. Most **international** broadcasting stations do not require enclosure of return postage and will reply with a QSL card or letter. **Domestic** broadcasting stations do not normally request reports from foreign listeners, so return postage should be sent with reports to these stations. Return postage should be sent in the form of an International Reply Coupon (IRC), obtainable at post offices in most countries. Reports should be sent to the station address given in the country listings. They can be written in English in most cases, but Spanish is preferred by South and Central American stations.

Reception reports are useful to radio engineers in selecting the most suitable frequencies for broadcasts beamed to your area. Reports are preferred in the SINPO code, which is as follow:

S (Signal Strength)	I (Interference)	N (Noise)	P (Propagation Disturb.	O (Overall Merit)
5 excellent	5 nil	5 nil	5 nil	5 excellent
4 good	4 slight	4 slight	4 slight	4 good
3 fair	3 moderate	3 moderate	3 moderate	3 fair
2 poor	2 severe	2 severe	2 severe	2 poor
1 barely aud.	1 extreme	1 extreme	1 extreme	1 unusable

Information about **Television Stations** is provided in the section following the radio section, including names and adresses of Television companies, location, power and channel of Television stations, and program schedules of these stations.

With reference to the first Television page we give a short explanation of some of the technical words and figures mentioned—The announced **location** of the station is usually the studio location, since most TV tr's are situated upon the highest location in the area in order to obtain more widespread coverage—Two systems of **modulation** are used to transmit the audio signal of the TV st's either frequency modulation (FM) or amplitude modulation (AM). All video transmissions are normally amplitude modulated — **Polarization** signals are horizontally polarized (H) or are vertically polarized (V). Polarization is usually selected according to the need for a reduction of interference with other stations, or to obtain engineering standards required by the government of the country in which the st. is located — The **band width** is shown in Mc and represents the limits within which both the video and audio tr. are contained — **Number of lines** transmitted express the number necessary to form one complete frame or picture, and **frames** state the number of times per second the picture area is completely scanned—**Video and Audio Power** is indicated in kilowatt (kW) or Watt (W). In the most cases the figures denote the effective radiated power (ERP) due to the stations antenna system—**Video and Audio Frequency** is stated in Mc per sec. The relationship between the quoted figures and the limits of the video band varies among countries and can be determined by reference to the standards of the systems used by the respective countries.



The Shure SM58 self-windscreened unidirectional microphone is ideal for broadcast uses as remote news, sports, interview and vocal recordings because it eliminates or minimizes the irritating "pop" caused by explosive breath sounds. It's great for studio announcing, too—or wherever the announcer or vocalist "hugs" the microphone. Of course, the same filters that eliminate pop also do away with the necessity for an add-on windscreen for outdoor uses.

On the other hand, the unusually effective unidirectional cardioid pickup pattern (uniform at *all* frequencies, in *all* planes) means that it is a real problem-solver where background noise is high or where the microphone must be operated at some distance from the performer. Incidentally, but very important, the SM58 tends to control the low frequency "boominess" that is usually accented by close-up microphones.

Other features: the complete pop-proof filter assembly is instantly replaceable in the field, without tools. Filters can be easily cleaned, too. Stand or hand operation. Detachable cable. Rubber-mounted cartridge minimizes handling noise.

Special TV tested non-glare finish. Multi-impedance, small size for maximum handability.

SHURE SM58

SELF-WINDSCREENED UNIDIRECTIONAL DYNAMIC MICROPHONE

INTERNATIONAL BROADCASTING AND TELEVISION ORGANIZATIONS

EUROPEAN BROADCASTING UNION (EBU)
UNION EUROPEENNE DE RADIODIFFUSION (UER)
EUROVISION

Seat, Administrative Office, Department of Legal Affairs: 1, *rue de Varembé, Geneva*, Switzerland.
Technical Centre: 32, av. Albert Lancaster, Brussels, Belgium.
Receiving and Measuring Station: Jurbise (Belgium).
International Television Coordination Centre (*Eurovision*), *Palais de Justice, Brussels*, Belgium.
Administrative Council: President: J. B. Broeksz, NTS-NRU (Associations of Dutch Radio and Television Organizations). Vice-Presidents: Sir H. Greene, BBC (British Broadcasting Corporation), J. B. Dupont (*O.R.T.F.*).
Administrators: Representatives of broadcasting organizations in: Denmark, Finland, France, Germany (Fed. Rep.), Ireland, Italy, Netherlands, Spain, Switzerland, United Kingdom (BBC) and Yugoslavia.
Directors: Director, Administrative Office: H. Hahr. ***Director of Legal Affairs:*** G. Straschnov. **Director of Technical Centre:** G. Hansen.
Active Members: Broadcasting organizations in: Austria, Belgium, Denmark, Finland, France, German Fed. Rep. (ARD, ZDF), Greece, Iceland, Ireland, Israel, Italy, Lebanon, Luxembourg, Monaco, Netherlands, Norway, Portugal (ENR, RTP), Spain, Sweden, Switzerland, Tunisia, Turkey, United Kingdom (BBC, ITA/ITCA), Vatican State, Yugoslavia.
Associate Members: Broadcasting organizations in: Australia (ABC, Federation of Australian Commercial Television Stations), Brazil (Associação Brasileira de Emissoras de Rádio e Televisão, Diarios Associados Ltda., Emissoras Unidas de Rádio e Televisão), Canada (CBC), Ceylon, Chad, Congo (Kinshasa), Cyprus, Dahomey, Gabon, Ghana, Haiti, Ivory Coast, Japan (NHK, NAB), Kenya, Liberia, Malawi, Malta, Mexico, Morocco, New Zealand, Niger, Nigeria, Pakistan, Rep. of South Africa, Rhodesia, Tanzania, United States (ABC, BFA, CBS, NAEB, NBC, NET, Time-Life Broadcast Inc., US Information Agency), Upper Volta.
Publications: EBU Review – every month in English and French, published in two separate parts: A (Technical) and B (General and Legal) – Long and Medium wave reports (European Area) – Lists of European stations (long and medium waves, VHF sound broadcasting, and television) – General, Legal and Technical Monographs – Reports of seminars on educational television.

INTERNATIONAL RADIO AND TELEVISION ORGANIZATION OIRT

Addr: 15, U Mrázovsky, Prague 5, Czechoslovakia. **Cable:** Interadif, Praha.
Nature: International Organization dealing with practical and theoretical questions connected with broadcasting and television prgr's and technique and cooperation between broadcasting and television organizations.
Governing Body: General Assembly consisting of one representative for each active member.
Administrative Council: Consisting of 7 to 13 members, Chairman for 1966–1967: Wlodzmierz Sokorski, President of the Polish Radio and Television Committee. Vice-Chairmen for 1966–1967: representatives – Presidents or General Directors of the U.A.R. Broadcasting Corporation, Cairo and of the National Broadcasting Organization "Voice of Vietnam", Hanoi.
Members: Representatives of the Radio and Television Organizations of the Chinese People's Rep., Rep. of Cuba, Czechoslovak S. Rep., Lithuanian SSR, People's Rep. of Poland, Rumanian Socialist Rep., United Arab Rep., Union of Soviet Socialist Rep., Democratic Rep. of Vietnam.
Members: Radio and Television Organizations of: The People's Rep. of Albania; Belorussian SSR; People's Rep. of Bulgaria; Chinese People's Rep; Rep. of Cuba; Czechoslovak S. Rep; United Arab Rep; Estonian SSR; Finland; German Democratic Rep; Hungarian People's Rep; Iraq; Korean People's Democratic Rep; Latvian SSR; Lithuanian SSR; Rep. of Mali; Moldavian SSR; People's Rep. of Mongolia; People's Rep. of Poland; Rumanian Socialist Rep; Ukrainian SSR; Union of Soviet Socialist Rep; People's Democratic Rep. of Vietnam.
Facilities: Administrative Office and Technical Centre, Prague, Czechoslovakia.
Specialized Commissions: Technical Commission: Chairman: Z. Zherkov (Bulgarian People's Rep.). Radio Prgr. Commission: Chairman: R. Grimmer, First Vice-President of the Radio & Television Organization of the German Democratic Rep; Television Prgr. Commission and Intervision Council: Chairman: F. Kulcsár, Hungarian Radio and Television.
Publications: Review of the International Radio and Television Organization (OIRT) "Radio & Television" in English–French, Russian and German, issued every two months. Monthly OIRT Information, and quarterly Catalogues of prgr's suitable for exchange: a) radio, b) television.
Meetings: General Assembly every two years, Administrative Council every year.
Relations with all important organizations active in the field of radio and television.

INTERNATIONAL TELECOMMUNICATION UNION

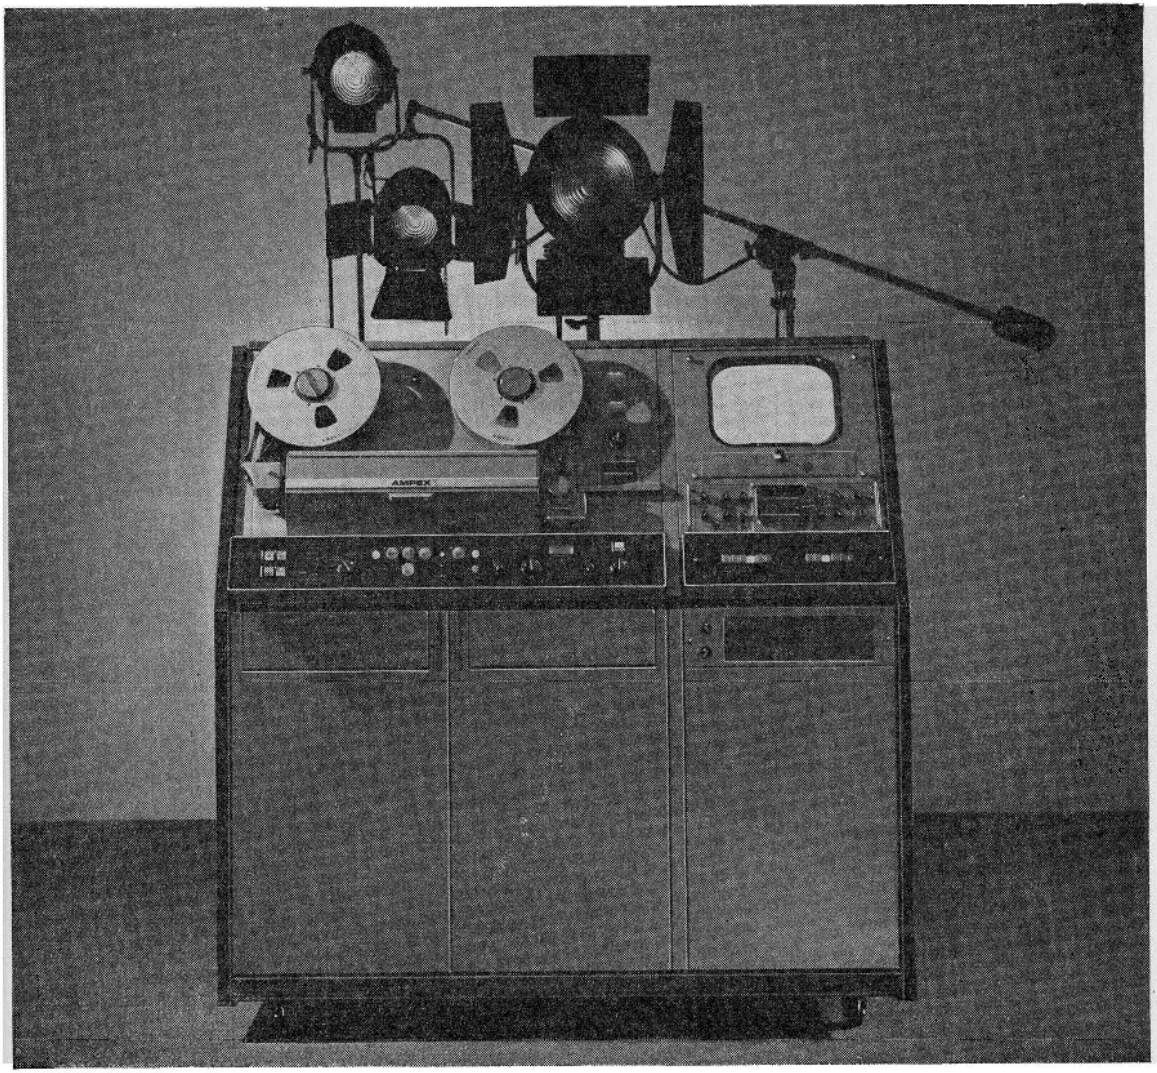
Addr: Place des Nations, 1211 Geneva 20, Switzerland. **Te:** 237000–348000.
Secretary General: Dr. Manohar Balaji Sarwate, India.
Intern. Frequency Registration Board (IFRB). *Intern. Tel. & Tel. Consultative Committee* **(CCITT).**
Dir: J. Rouvière, France.
Intern. Radio Consultative Committee (CCIR). Dir. ad interim: Leslie W. Hayes, United Kingdom. Study Group X (broadcasting). Chairman: A. P. Walker, USA; Study Group XI (television), Chairman: E. Esping, Sweden; Study Group XII (Tropical Broadc.), Chairman: N. V. Gadadhar, India.
Administrative Council: Algeria, Argentina, Australia, Brazil, Canada, China, Dahomey, Ethiopia, Federal Rep. of Germany, France, India, Ireland, Italy, Japan, Lebanon, Malagasy Rep., Mexico, Morocco, Nigeria, Pakistan, Poland, Saudi Arabia, Switzerland, Uganda, United Kingdom, United States of America, USSR, Venezuela, Yugoslavia.
Membership (129 Members): Afghanistan, Albania (People's Rep. of), Algeria (Dem. and Popular Rep. of), Saudi Arabia (Kingdom of), Argentine Rep, Australia (Commonwealth of), Austria, Belgium, Bielorussian SSR, Burma (Union of), Bolivia, Brazil, Bulgaria (People's Rep. of), Burundi (Kingdom of), Cambodia (Kingdom of), Cameroon (Federal Rep. of), Canada, Central African Rep, Ceylon, Chile, China, Cyprus (Rep. of), Vatican City State, Colombia (Rep. of), Congo (Dem. Rep. of the), Congo (Rep. of the) (Brazzaville), Korea (Rep. of), Costa Rica, Ivory Coast (Rep. of the), Cuba, Dahomey (Rep. of), Denmark, Dominican Rep, El Salvador (Rep. of), Terr's represented by the French Overseas Post & Telecomm. Agency, Ecuador, Spain, USA, Ethiopia, Finland, France, Gabon Rep, Ghana, Greece, Guatemala, Guinea (Rep. of), Haiti (Rep. of), Upper Volta (Rep. of), Honduras (Rep. of), Hungarian People's Rep, India (Rep. of), Indonesia (Rep. of), Iran, Iraq (Rep. of), Ireland, Iceland, Israel (State of), Italy, Jamaica, Japan, Jordan (Hashemite Kingdom of), Kenya, Kuwait (State of), Laos (Kingdom of), Lebanon, Liberia (Rep. of), Libya (Kingdom of), Liechtenstein (Principality of), Luxembourg, Malaysia, Malawi, Malagasy Rep, Mali (Rep. of), Malta, Morocco (Kingdom of), Mauritania (Islamic Rep. of), Mexico, Monaco, Mongolian People's Rep, Nepal, Nicaragua, Niger (Rep. of the), Nigeria (Federal Rep. of), Norway, New Zealand, Uganda, Pakistan, Panama, Paraguay, Netherlands (Kingdom of the), Peru, Philippines (Rep. of the), Poland (People's Rep. of), Portugal, Spanish Provinces in Africa, Portuguese Oversea Provinces, Syrian Arab Rep, United Arab Rep, Federal Rep. of Germany, Federal Socialist Rep. of Yugoslavia, Ukrainian SSR, Somali Rep, Rhodesia, Roumania (Socialist Rep. of), United Kingdom of Great Britain and Northern Ireland, Rwanda (Rep. of), Senegal (Rep. of the), Sierra Leone, Singapore, Sudan (Rep. of the), South Africa (Rep. of), and Territory of South-West Africa, Sweden, Switzerland (Confederation), Tanzania (United Rep. of), Chad (Rep. of the), Czechoslovak Socialist Rep, Territories of the USA, Overseas Terr. for the international relations of which the Gov. of the UK are responsible, Thailand, Togolese Rep, Trinidad and Tobago, Tunisia, Turkey, Union of Soviet Socialist Rep, Uruguay (Oriental Rep. of), Venezuela (Rep. of), Vietnam (Rep. of), Yemen, Zambia (Rep. of),

UNESCO

(United Nations Educational, Scientific and Cultural Organization).
Addr: Place de Fontenoy, Paris 7, France – **L.P:** Dir. Gen: René Maheu.
Asst. Dir. Gen. for Communication: Tor Gjesdal.
Radio and Visual Information Division: Chief: Hans R. van Stuwe. Deputy Chief: Gerald S. Wade – Regional Units: Jean Bhownagary (Asia). Anatoli Bolgarev (Russian language production). Jean Calvel (French language production). Rex Keating (English language production). Fernando Restrepo (Spanish language production). Gerald S. Wade (North America).
Mass Communication Techniques Division: Chief: Pierre Navaux. Radio and TV techniques: Henry R. Cassirer.

UNION OF NATIONAL RADIO AND TELEVISION ORGANISATIONS OF AFRICA (URTNA)

URTNA is a Union of National Broadcasting Organizations of all independent Africa, its aims, under article 2 of its statutes are: –



The video recorder that sets a new standard: The Ampex VR-2000

Ampex's Videotape* Television Recorder, VR-2000 is expressly designed to operate on new high band standards. It utilizes a new high band carrier/deviation frequency (7.16 to 9.3 mc), which permits a single standard for both colour and monochrome. The VR-2000's performance specifications are impressive: a S/N ratio up to 46 db; basic frequency response to six megacycles; excellent transient response and virtually non-existent moire. Performance is so good, in fact, that multiple generation copies made on the VR-2000 equal original tapes made on present equipment.

Although it possesses all this upper range ability, the VR-2000 is instantly switchable to present low band standards in either 625 or 525 lines. And for all its sophistication, it is the most reliable and easy to operate recorder ever built. A complete line of VTR accessories is available now for the VR-2000: Intersync* (standard on all VR-2000s); Amtec;* Electronic Editor; Colortec;* and Editec.* The VR-2000 and its accessories are products, not promises. The VR-2000 is presently in most of the world's television networks. Write today for complete information.

AMPEX

Ampex sales and service facilities are conveniently located throughout Europe and the Middle East. For more information write to: Ampex Great Britain Ltd., Acre Road, Reading, Berkshire, England. Telephone Reading 84411 · Ampex S.A., Via Berna 2 Lugano, Switzerland. Telephone 091/3.81.12 · Ampex Europa, G.m.b.H., 6 Frankfurt Main, Dusseldorfer Strasse 24, Germany. Telephone 252001 – 5. Ampex, 41 Avenue Bosquet, Paris 7e, France. Telephone 705.38.10.

"The U.R.T.N.A. has no commercial aims. Its objects are: –

(a) To support in every field the interests of those African organisations operating radio and or television services that have accepted the present statutes and to establish relations with other international organisations.
(b) to promote and coordinate the study of all questions relating to broadcasting and to secure the exchange of information on all matters of general interest to those radio and or television services.
(c) to take all possible steps designed to assist the development of African radio and television in all its forms.
To seek within the framework of African co-operation, the solution to any differences that may arise between members.
(e) to use its good offices to ensure respect by all members for the provision of international and inter-African agreements relating to all aspects of radio and television".

The Union headquarters is at the moment in Dakar and its Technical Centre at Bamako – The Pres. of the Union is Mr. M. Rezzoug, Algeria; Vice-Pres. Mr. Racine Kane, Mali. The Director of the Administrative Centre at the Headquarters is Mr. A. H. Younes. The Director of the Technical Centre is A. H. Antar. Members of the Administrative Council of the Union are Algeria, Cameroon, Congo-Brazzaville, Ivory Coast, Mali, Mauritania, Nigeria, Senegal and Togo. – The Headquarters address of the Union is U.R.T.N.A., 15, Boulevard de la Republique, B.P. 3237, Dakar, Senegal.

ASIAN BROADCASTING UNION

Headquarters: ABU Secretariat, c/o NHK, Uchisaiwai-cho, Chiyoda-ku, Tokyo, Japan. Cable address: ABUNI, Tokyo.
Sec. Gen.'s Office: Box 3636, G.P.O., Sydney, Australia. Cable address: ASBUN, Sydney.
President: Yoshinori Maeda, President, Nippon Hoso Kyokai, Japan.
Administrative Council: Australian Broadcasting Commission, Broadcasting Corporation of China, All India Radio, Nippon Hoso Kyokai, Radio and TV Malaysia, New Zealand Broadcasting Corporation, Philippine Broadcasting Service, Radio Thailand, Turkish Radio and TV Corporation.
Secretary-General: Sir Charles Moses, C.B.E.
Full Members: Radio Afghanistan, Australian Broadcasting Commission, Radio Ceylon, Broadcasting Corporation of China, All India Radio, Nippon Hoso Kyokai, Korean Broadcasting System, Radiodiffusion Nationale Lao, Radio and TV Malaysia, Radio Nepal, New Zealand Broadcasting Corporation, Radio Pakistan, Philippine Broadcasting Service, Radio and TV Singapore, Radio Thailand, Tonga Broadcasting Commission, Turkish Radio and TV Corporation, UAR Broadcasting Corporation, Radio Viet-Nam, Samoa Broadcasting Service.
Associate Members: Federation of Australian Commercial Broadcasters, Brunei Broadcasting Service, Canadian Broadcasting Corporation, Fiji Broadcasting Commission, Office de Radiodiffusion Television Française, Arbeitsgemeinschaft der Öffentlich-Rechtlichen Rundfunkanstalten der Bundesrepublik Deutschland, Zweites Deutsches Fernsehen, Radio Hong Kong, Hong Kong Commercial Broadcasting Co. Ltd., Nigerian Broadcasting Corporation, British Broadcasting Corporation, Independent Television Authority/Independent Television Companies Association Ltd. (U.K.), Columbia Broadcasting System (U.S.A.), National Broadcasting Company (U.S.A.), National Educational Television (U.S.A.), U.S. Information Agency, U.S.A., Time-Life Broadcast Inc. (U.S.A.).

The ABU is a Union of national broadcasting organisations in the Asian/Pacific region which was formally established on 1st July, 1964, following five Asian Broadcasters' Conferences held between 1957 and 1963 in Tokyo, Kuala Lumpur and Seoul. The first annual General Assembly of the ABU was held in Sydney in November, 1964, and the second, attended by delegations from 25 members, in Tokyo in October, 1965. The third Assembly in Taipei 24–31 October 1966.
Publications: ABU Newsletter (Monthly in English).

INTERNATIONAL BROADCASTERS SOCIETY (IBS)

Secretariat: 78 Zwaluwlaan, Bussum, the Netherlands. (Tel: 02159-10005).
Office for USA: 380 Lexington Avenue, Suite 303, New York City, N.Y., USA 10017. Telephone: 212 – MU 2-4500).
Nature: The IBS is a world body. It is a non-profit professional fellowship created to serve the needs of all persons and organizations everywhere concerned in any way with radio and television broadcasting.
The IBS function as a permanent forum for maintaining liaison. It interprets the meaning of the word liaison in the broadest possible manner.
There are three main types of membership. (i) Corporate, (ii) Personal and (iii) Free Exchange. **Corporate** membership is open to every radio and television station in the world as well as related industries. **Personal** membership is open to anyone in anyway concerned with radio and/or television broadcasting. **Free Exchange Membership** is offered to every association and federation in the world, in any way concerned with serving broadcasting interests.
Governing Body: The IBS is governed by a Board of Directors elected by the membership. There are sixteen seats on the Board. Names of the current Board will be found in the 1966 WRTH.
Relations: The Society has registered members from more than a hundred nations, including an exchange of memberships with a number of national and international associations.
Status: The Society is registered with l'Union des Associations Internationales, in Brussels, as a non-governmental and non-legislative organization. The Society is a legal corporate body under the laws of the Netherlands.

COMMONWEALTH BROADCASTING CONFERENCE

Members: All India Radio, Australian Broadcasting Commission, British Broadcasting Corporation, Canadian Broadcasting Corporation, Cyprus Broadcasting Corporation, Ghana Broadcasting Corporation, Jamaica Broadcasting Corporation, Malawi Broadcasting Corporation, Malta Broadcasting Authority, New Zealand Broadcasting Corporation, Nigerian Broadcasting Corporation, Radio Ceylon, Radio Pakistan, Radio Tanzania, Radio and Television Malaysia, Radio Uganda, Sierra Leone Broadcasting Service, Voice of Kenya, Zambia Broadcasting Services.
The Conference is a standing association of the national public service broadcasting organizations which are responsible for the planning and presentation of the broadcast programmes of independent Commonwealth countries. The first meeting was called in London in 1945 in order that the national broadcasting organizations of Britain, Canada, Australia, New Zealand, South Africa and India could review the co-operation which had existed between them during the war years and consider how this co-operation could best be sustained in time of peace. Subsequent Conferences, attended by the chief executives and senior engineers of the member organizations, have been held in Britain (1952), Australia (1956), India (1960), Canada (1963) and Nigeria (1965). The Seventh Conference will meet in New Zealand in February 1968.

Holding in common the belief that broadcasting is a public trust, the member organizations are professionally committed to the establishment and extension of national radio and television services as a means of information, education and entertainment. Meeting now at intervals of not less than two and not more than three years, the Conference directly promotes the pooling and sharing of experience and resources throughout the Commonwealth, and in 1965 established a permanent Study Group on Training to intensify co-operation in that particular field.
Secretariat address: Broadcasting House, London W. 1., England.

ASOCIACION INTERAMERICANA DE RADIODIFFUSION (AIR)

President: Sr. Lic. Félix Cardona Moreno, Apartado 3955, Caracas, Venezuela.
AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 5000 broadcasting and 400 television stations.

UNIVERSITE RADIOPHONIQUE ET TELEVISUELLE INTERNATIONALE (U.R.I.)

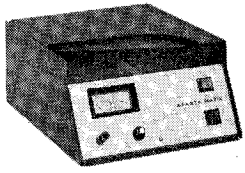
Addr: 116, Ave du President Kennedy, Paris 16è, France. Pres: M. R. Dovaz. Secr. Gen: A. Lanoux. – Radio Commission: K. Edo, Ivory Coast; E. Gampe, Germany. Mme. N. Erceg, Yugoslavia – TV Commission: H. Maas, Netherlands; L. Ehrenborg, Sweden; A. Zorzi, Italy.

ATTENTION ALL **RADIO STATIONS**

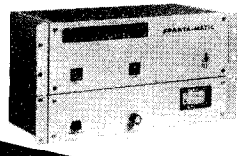
To keep the WRTH and its Supplement completely up-to-date we appeal to you to send us your schedules regularly. In turn we promise to keep your world-wide listeners informed about changes of times and frequencies.

WORLD RADIO TV HANDBOOK CO, Ltd,
Sundvej 6, Hellerup, Denmark.

SPARTA-MATIC®
TAPE CARTRIDGE SYSTEMS*

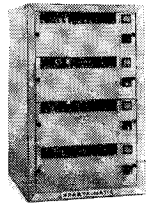


800C SERIES
Space saving, compact, table-top convenience • Transistorized modular electronics • Super-silent operation • Hinged lid for easy internal access • 800C-RP - $650 800C-P - $475



300C SERIES
Rack, table-top or cabinet mounting • Transistorized plug-in modules • 2nd and 3rd tone cue option • Separate record amplifier • Full remote operation • 300C-P - $520 300C-R - $240

MC-104
MULTI-CARTRIDGE PLAYBACK
Provides four independent plug-in CH-5 tape cartridge transports • Compact design for table-top (illustrated) or rack mount installation • Individual transistorized electronics • Manual or sequential operation • Multi tone and audio switcher options

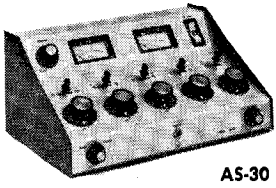


CD-15 TIME DELAY & REVERB UNIT
Time delay of 3 seconds to 31 minutes • Provides "before-air" censorship of conversational programing • Selective reverberation effects.
Price: $425

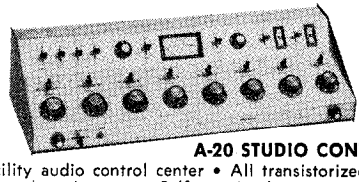
* ALL SPARTAMATIC SYSTEMS EXCEED NAB STANDARDS

† ALL SPARTA CONSOLES EXCEED FCC PROOF OF PERFORMANCE SPECIFICATIONS

SPARTA
AUDIO EQUIPMENT AND ACCESSORIES†

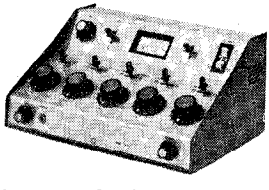


AS-30
STEREO AUDIO CONSOLE
Five stereo mixer channels • 14 stereo audio inputs • Monitor, cueing & muting terminal facilities provided • All transistorized modular electronics • Selectable stereo/mono mode control • Price: $595



A-20 STUDIO CONTROL CONSOLE
Full facility audio control center • All transistorized • Eight mixers • Twenty-two inputs • Self-contained power supply • 5 watt monitor and .5 watt cue amplifier • Accomodates eight preamps (three supplied) • Individual electronic modules • Studio talkback provisions • Functional, space-saving compactness • All inputs and output are transformer balanced • Price: $995 •

RA-5 REMOTE MIXER
Two mixers • 3 audio inputs • Line test oscillator • P.A. output • 30 hour battery operation • Shoulder strap carrying case included • Price $225 Optional A/C Power Supply (PS-3) - $29.50



A-15 AUDIO CONSOLE
14 audio inputs • Five mixing channels • Built in monitor, cueing & muting systems • All transistorized modular electronics • Three line outputs plus P.A., headphone & external speaker output • Accomodates up to four preamps • Price: $425.

AC-155
STUDIO/REMOTE UNIT
Recording studio • Remote broadcast • Main studio control • Full broadcast facility • Monitor & cue system • Muting • P. A. output • Solid state removeable console • Two 3-speed custom turntable systems • Six low-level and eight high-level inputs • Price: $995 — Model ASC-305 Stereo - $1,450

TELESCO INTERNATIONAL CORPORATION

for broadcast equipment

CCA ELECTRONICS CORPORATION
AM and FM broadcast transmitters, antenna couplers, modulation and frequency monitors, AGC and limiting amplifiers, remote control for transmitters.

FAIRCHILD RECORDING EQUIPMENT CORPORATION
Monaural and stereo disk cutting systems including lathes, cutting heads, amplifiers; limiter, compressor, and power amplifiers; modular solid state amplifiers, preamplifiers, limiters, compressors, attenuators; integrated solid state speech input consoles; transcription turntables; reverberation generators, master tape improvement systems.

SARKES TARZIAN INCORPORATED
Television studio and transmitting equipment including live and film camera chains optical multiplexers, slide projectors, sync generators, video switching systems including vertical interval type, studio automation systems, VHF - TV transmitters, microwave links and other items.

PACKARD-BELL
Vidicon cameras for TV studio and industrial closed circuit TV applications, educational TV systems.

BALL BROTHERS RESEARCH CORPORATION
TV special effects generators, automatic gain control video amplifiers, video and pulse distribution amplifiers.

DMG ELECTRONICS INCORPORATED
VHF - TV transmitters 75 watts to 2 KW, TV sideband analyzer, multi-burst and stairstep generator, TV rebroadcast receiver.

JOHNSON ELECTRONICS INC.
Transistorized FM multiplex receivers for music systems and other applications, audio amplifiers.

CAPPS AND COMPANY INCORPORATED
Recording styli including heated types, condenser microphones.

CROWN INTERNATIONAL
Professional reel type magnetic tape recorders and reproducers, tape duplicator systems.

ELECTRO-VOICE INCORPORATED
Broadcast and general purpose microphones, speakers and speaker systems.

DISAN ENGINEERING CORPORATION
Portable and mobile VHF - FM program quality remote pickup links, UHF - FM multi-channel program quality STL with optional facilities for remote control and remote logging, FM background music receivers including multiplex types.

ANTENNA PRODUCTS CO.
High frequency log periodic transmitting antennas of all types including fixed station and transportable, also rotatable types; conical monopole broadband vertical omni-directional antennas, antenna support towers.

TELESCO ALSO SUPPLIES
All necessary additional items such as: TV and FM antennas, transmission line, TV translators, etc.

TELESCO serves as world-wide sales representatives for leading manufacturers of radio and television broadcasting equipment. For technical and descriptive information concerning any of the products listed, contact TELESCO

AM - 10,000 D

The CCA AM-10,000D, 10 KW AM broadcast transmitter incorporates features that are standard in all CCA AM transmitters. These include:

Silicon rectifiers with minimum of 200% safety factor; 300% reserve in air cooling; minimum tube costs; low distortion high level plate modulation; automatic overload recycling; minimum floor space; full accessibility with hinged meter panels.

CCA *Quality* AM BROADCAST TRANSMITTERS

- VLF, MF. HF FREQUENCIES
- EXCEEDS FCC & CCIR SPECS
- ALL POWERS 100 TO 100,000 WATTS
- CONVENTIONAL HIGH LEVEL MODULATION
- CONSERVATIVE — LONG LIFE MODERN TUBES
- EMPHASIS ON STANDARD PARTS
- SILICON RECTIFIERS
- FULL ACCESSIBILITY
- SINGLE CHANNEL
- MULTIPLE CHANNEL PRESET
- MULTIPLE CHANNEL SIMULTANEOUS

CCA *Reliable* VHF FM BROADCAST TRANSMITTERS

- 10 TO 40,000 WATTS
- NO REQUIREMENTS FOR NEUTRALIZATION
- TRUE GROUNDED GRID PA CIRCUITRY
- DESIGNED FOR STEREO AND MULTIPLEXING
- SILICON RECTIFIERS
- MINIMUM TUBE COSTS
- AUTOMATIC OVERLOAD RECYCLING

The CCA FM-10,000D, 10KW FM broadcast transmitter incorporates engineering features which are standard in all CCA FM broadcast transmitters. These include:

Zero bias high mu triodes with grids connected directly to DC ground. This eliminates the requirement for neutralization, RF bypass capacitors and bias supplies. In addition, all transmitters contain silicon rectifiers with minimum of 200% safety factor, 300% reserve in air cooling; minimum tube cost, automatic overload recycling, multiplex and stereo operation.

EUROVISION IN 1966

By J. Treeby Dickinson, Chief Engineer, Technical Centre of the E.B.U.

Every year since its founding in 1954 has been marked for Eurovision by a significant development in one field or another – new countries connected to the network, a remarkable increase in the scale of the transmissions or the coverage of one or more major events. 1966 was certainly no exception; it was noteworthy in all three fields, but in particular by virtue of the coverage of the World Football Championships in the United Kingdom and of the extension of the network to Tunisia, both in July, 1966.

Extension of the Eurovision Network to Tunisia

A television transmitter had been in experimental operation at Bou-Kornine in Tunisia for some years, but it was only on May 31st, 1966 that the Radiodiffusion-Télévision Tunisienne officially inaugurated its television service. In July, 1966 the R.T.T. was connected to the rest of the Eurovision Network by means of a permanent vision link established between Sicily and Tunisia, which thus became the third country in Africa to be so connected. This was not, however, the first vision circuit to be established over this route, since a temporary link had been set up in January, 1966 from Tunisia to Sicily, with an intermediate relay on the Italian island of Pantelleria, in order to permit the R.T.T., in collaboration with the O.R.T.F., to transmit on January 22nd, 1966 a live programme from Kairuan, the second holy city of Islam, showing the celebrations that marked the end of Ramadan, the month of fasting. This programme was distributed over the Eurovision Network to some eight television services in Europe, which either broadcast it live or recorded it for transmission later in the day. A second programme was transmitted over the same route on the following day. The Radiotelevisione Italiana set up these temporary links and also assisted with the planning of the permanent link, which covers the distance of about 170 km between Monte Erice in Sicily and Cap Bon in Tunisia in a single hop. The permanent circuit will have a vision channel in each direction and the first stage of its construction, consisting of the south-going channel, was completed in early July in time to enable the R.T.T. to receive transmissions of the World Football Championships from the United Kingdom.

The World Football Championships

The series of transmissions from the United Kingdom during the period July 11th–30th, 1966 constituted the most important Eurovision operation of the year and indeed one of the biggest in its history. There were in all some thirty-one Eurovision transmissions of matches from eight grounds, many of them played simultaneously and totalling sixty-one hours, as well as a further eighty-eight request transmissions for individual Services, totalling thirty-five hours.

The programme requirements of E.B.U. Members were coordinated by the E.B.U. Administrative Office in conjunction with a Consortium which was formed by the B.B.C. and the commercial television services in the United Kingdom, to provide the necessary programme and technical facilities as a combined operation. The technical arrangements for transmission in Europe were coordinated by the E.B.U. Technical Centre and in certain respects they were more extensive in scale and complexity than on any previous occasion. For example, the transmissions of the opening match, the two semi-finals and the final were each received by over thirty television services in Europe, North Africa and America and in the case of the final some twenty-eight separate commentary circuits were set up. On three occasions, four matches were transmitted simultaneously, many services receiving two or more, of which one was broadcast live and the others recorded for broadcast later. Thus on July 23rd, the four quarter-final matches were received by twenty-three, thirteen, nine and eight services respectively, making a total of fifty-three service-receptions; for the commentaries, some thirty-seven circuits were set up, The simultaneous transmission of four matches necessitated the installation of a number of temporary vision links in order to provide for their distribution in continental Europe. These included two additional circuits from London across the English Channel to Lille, making a total of four working circuits and one reserve circuit available over that route. Other temporary supplementary circuits were set up between Hamburg and Copenhagen, Sand (Western Germany) and Albis (Switzerland), Monte Generoso (Switzerland) and Milano, and between Carcassonne and Perpignan in France, in order to overcome bottle-necks which would have otherwise prevented the satisfactory distribution of the programmes in Europe. In addition, a temporary circuit was set up between Lille and Brussels, so that the E.B.U.'s International Technical Coordination Centre (CICT) in Brussels could simultaneously monitor all four programmes being received from the United Kingdom. The planning of the routes to be followed by the vision and sound components of the different programme transmissions was extremely complex and, in the case of the four quarter-finals and the subsequent matches, it could not be completed in detail until it was known which teams would be playing – depending, of course, on the results of earlier matches – and consequently which matches were of particular interest to each country. In assessing the magnitude of this task, it should be borne in mind that the Championship was not the only event of international significance taking place at that time. For example, the first four days of the period coincided with the closing stages of one of the principal cycle races of the year, the Tour de France, which gave rise to numerous Eurovision transmissions. There was, moreover, a series of transmissions from the U.S.A. via the Early Bird satellite, covering the launching, flight and recovery of the space-craft Gemini X. These transmissions were required by many European television services and had to be fitted in to the already complex pattern at relatively short notice.

The successful accomplishment of this task reflects not only the close cooperation between the U.K. Consortium, the British Post Office and the E.B.U. Administrative Office and Technical Centre during the period of the Championship, but also the very comprehensive and flexible basic planning which had been effected by these bodies long in advance.

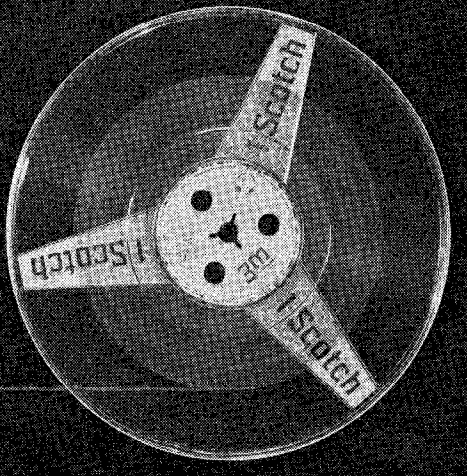
PROBLEM: SLOW THREADING



SOLUTION: THIS NEW 3M SELF-THREADING TAPE REEL

Simply lay tape inside reel and start recorder. Reel threads itself automatically. No hooks, no slots, no hand winding. Solid sides protect tape against damage. "Scotch" Brand 7" Self-Threading Reel has a snap-tight plastic cover for dust-proof storing without a box.

PROBLEM: TOO MUCH NOISE

SOLUTION: NEW 3M DYNARANGE RECORDING TAPES

New "Scotch" Brand Tapes (in both acetate and polyester) increase signal-to-noise ratio 3db to 6db over conventional tapes. Improve high frequency response. Wear 15 times longer. Save tape because they operate at half your normal recording speed with no loss in fidelity.

Scotch BRAND TAPES AND REELS are among scores of new 3M audio-video advances. More information? Write: 3M, Minnesota Mining & Manufacturing Co., International Division, Box 3800, St. Paul 1, Minnesota, U.S.A.

RCA...the

The "Matched Line" is the end result of a multi-million-dollar engineering program to produce a new generation of broadcast equipment. RCA Matched Equipment reflects the newest in styling, performance and operation—to produce definite advantages and superiority for you.

Matching means equipments that are designed to provide the ultimate in performance when used together...equipments that are designed and styled to fit together efficiently, and to provide the finest, most modern appearance for the whole station. It means installations that are compact, yet easily expandable, that offer greater reliability, and that provide for easy operation and maintenance. It means simplicity in ordering, easier follow-up and guaranteed satisfaction...from one factory, one ultimate source of responsibility, one set of designers and engineers. And it means equipment that is designed for tomorrow, assuring a better

EUROVISION *(continued from page 22)*

Growth in the number of transmissions

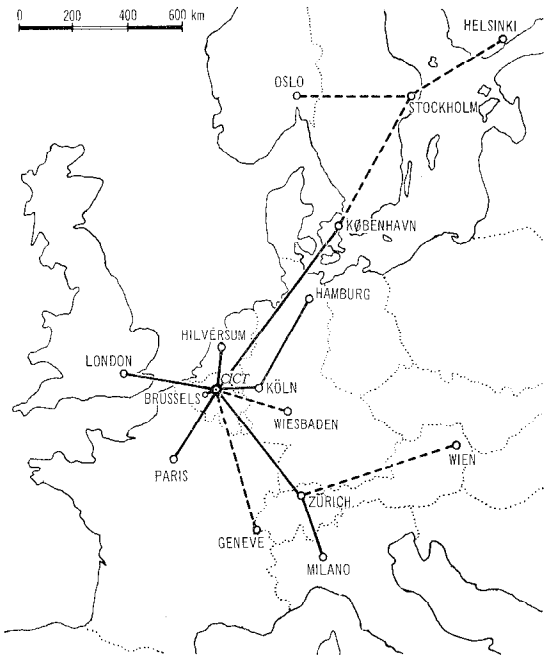
After more than ten years of Eurovision programme exchanges, it might be expected that the rate of growth of activity would slacken off and that ultimately a saturation point would be reached. However, the statistics show that this point is not yet in sight. Thus, in 1965, the number of transmissions planned and supervised by the E.B.U. Technical Centre totalled 1551 and their total duration at the origin was 969 hours, these figures representing increases of about 20% and 8% respectively compared with the corresponding figures for the previous year. The figure of 935 transmissions having a total duration of 585 hours during the first six months of 1966 – statistics for the whole year are not yet available – suggests that the growth for the whole of the year may well attain or even exceed 20% in both respects. Of course, none of the television services that participate in Eurovision takes all the transmissions, the average figure for all the exchanges is between five and six services per transmission, although programmes in certain categories are taken by many more services. One such category is that of the daily multiple-origin news exchanges in which the average participation rose from under twelve in 1965 to over thirteen in the first six months of 1966. The rapid growth of these news exchanges has been one of the most important features of the development of Eurovision in recent years and now they represent about half the total number of transmissions.

Evidently, these news exchanges can only be planned at very short notice, depending as they do on the events that can be covered by the various services and the interest expressed in them by the other services; it is in facilitating such last-minute planning that the permanently leased network of programme-sound and communication circuits, which constitutes Stage 1 of the Eurovision Permanent Network Scheme, has continued to prove itself of great value. This network was extended yet again at the beginning of 1966 by the provision of communication circuits linking the existing terminals at Zürich and Stockholm with Vienna and with Oslo and Helsinki respectively. Stage 2 of the Permanent Network Scheme, corresponding to the permanent leasing of a network of vision circuits, has been held in abeyance as the cost would be uneconomic; it is hoped that these costs will be lower if and when a telecommunication satellite can be used for this purpose.

In the field of transmissions by satellite, it should be mentioned that, following the outcome of negotiations between the E.B.U. and the authorities responsible for the operation of the Earth-stations and the Early Bird satellite, transmissions by satellite between E.B.U. Members in Europe and North America are now integrated into the routine of Eurovision operations and will certainly lead to more effective and fruitful cooperation between the television services of the two continents.

Sound broadcasting

The increase in the utilisation of the permanently leased programme circuits for transmissions between Members' sound-broadcasting services led to a decision to provide a separate area within the CICT to facilitate the supervision of such exchanges. These transmissions are mostly of the nature of news or actuality, but the Members would like to utilise the Network for exchanging programmes of serious music; preliminary trials have confirmed that the quality obtainable at present is not good enough for this purpose, especially if the music is to be subsequently broadcast over frequency-modulation networks.



Map illustrating the present state of Stage 1 of the Eurovision Permanent Network Scheme.

The full line indicates routes over which two broadcast-quality sound circuits, one in each direction, are permanently available, together with control telephone circuits.

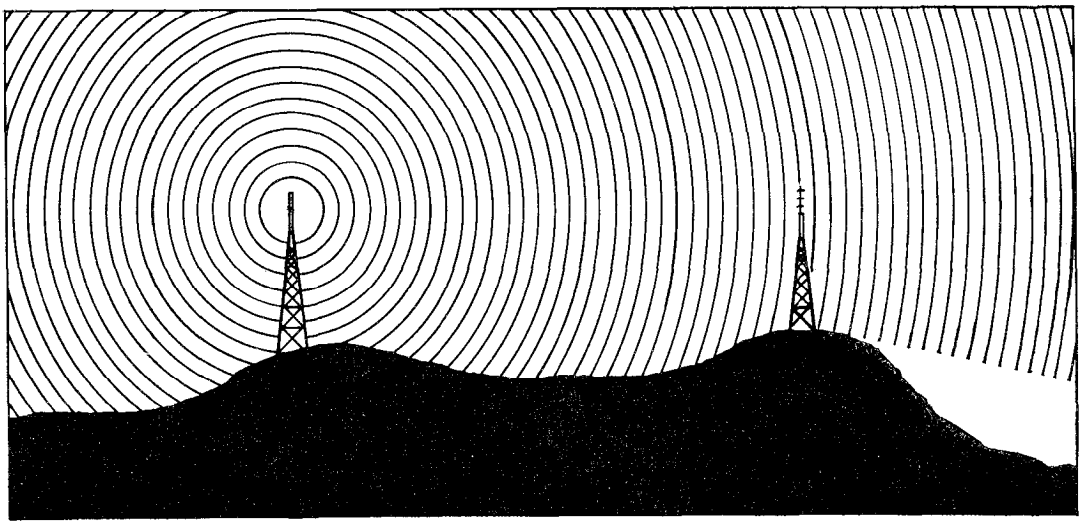
The broken line indicates routes over which only control telephone circuits are yet permanently available.

DX-Alliansen, Box 3108, Stockholm 3, Sweden.

DX-Alliansen is an organisation founded ten years ago by the Swedish DX-Clubs, governed and controlled by them. There has always been comparatively many DX-clubs in Sweden and, of course, they have much in common. The purpose of DX-Alliansen is to serve the clubs in respect to all common interests and problems, to represent them in Sweden and internationally. The interest for DX-Alliansen among the clubs has, of course, varied somewhat, but in the whole the interest has always been at a high level. One of the main reasons for this is probably the yearly **DX-Parliament,** a gathering in which clubs and DX-ers are taking part together with for every year a rising amount of representatives of radio stations and radio organisations in Europe.

DX-Alliansen publishes monthly a bulletin, Allians-Nytt. An English edition is published several times a year, and is distributed by Radio Sweden's DX-bulletin. DX-Alliansen also has a special DX-badge for different numbers of verified countries.

DX-Alliansen appreciates correspondence with foreign DX-clubs to exchange views and to discuss common problems.



Filling in the shadows

To increase the coverage of UHF television stations and to fill in the 'shadows' in main station coverage caused by uneven features of the terrain, STC has produced the FT.1-A medium power television translator for combined vision and sound channels. STC has received orders from the British Broadcasting Corporation for bands IV and V translators and from the Independent Television Authority for band III equipments.

The use of solid state techniques virtually eliminates the risk of failure and consequent shut-down. The travelling wave tube power amplifier guarantees long service. Such is the reliability of the FT.1-A that the stations can run entirely unattended for long periods. Standby equipment is generally unnecessary and the need for skilled maintenance reduced to a minimum.

□ Suitable for European and American systems □ Suitable for monochrome and colour transmissions □ Designed for unattended operation □ Common circuits for sound and vision □ Extensive use of solid state techniques □ TWT Power amplifier □ Front access for ease of maintenance.

Standard Telephones and Cables Limited, Radio Division, Oakleigh Road, New Southgate, London N.11. Telephone: ENTerprise 1234. Telex: 261912.

COLOUR-TELEVISION STANDARDS FOR EUROPE

by Georges Hansen
Director of the Technical Centre of the European Broadcasting Union
Vice-Chairman of C.C.I.R. Study Group XI (Television).

Georges Hansen

In the Article that I wrote at the end of 1965 for the 1966 World Radio TV Handbook, I did not express much hope that it would be possible to agree at the C.C.I.R. Plenary Meeting in Oslo in 1966 on a common colour-television system for all the countries of Europe. This did not prevent the E.B.U. Ad-hoc Group on Colour Television, under the chairmanship of Professor Theile, from continuing to work on the detailed specifications and on assessing the relative advantages and disadvantages of the systems taken into consideration: the NTSC, SECAM (or more precisely SECAM III) and PAL systems. Short descriptions of the three systems were given in my last article and a more complete study appears in the Report of the E.B.U. Ad-hoc Group on Colour Television, Second Edition, February, 1965, and in the Amendments to that Report issued in February, 1966.

Demonstrations of the PAL and SECAM III systems were given in Rome by the RAI under the auspices of the E.B.U. at the beginning of May, 1966 for the benefit of delegates from broadcasting organisations, Telecommunication Administrations and industry from all interested countries of Europe. The O.I.R.T. was also represented at these demonstrations, which were of great interest and very comprehensive.

A new system, known as NIIR or SECAM IV, was studied by a Franco-Russian team and also by some other laboratories in Europe, but was not officially proposed nor taken into consideration before the Oslo Conference. At the Oslo Conference all efforts to find a compromise whereby a single colour-television system might be recommended for the 625-line standard failed, including the proposal to postpone by six months the start of the colour-television services in those countries which wanted to do so in the autumn of 1967, and to study in common the SECAM IV system. The situation at the end of the Oslo Conference, that is on 22nd July, 1966 was the following as far as the European Broadcasting Area is concerned. This Area, it must be remembered, comprises geographical Europe plus the countries of Africa and Asia Minor that border the Mediterranean.

15 delegations indicated a preference for SECAM, 12 for PAL, 3 for SECAM IV and 6 delegations indicated no preference or abstained. The countries whose delegations opted in favour of SECAM fall into two geographical groups: those in the east of Europe including all those "beyond the Iron Curtain" plus Greece and Yugoslavia and those in the west of Europe, namely France and Monaco. Between these two groups lie the countries in favour of the PAL system, in central and northern Europe, stretching from Italy to Iceland. A choice has still to be made by those countries whose delegates opted for the SECAM IV system, or indicated no preference, or abstained. These countries are: Austria, Belgium, Luxembourg, Portugal, and Spain in Europe, Israel, Jordan and Turkey in the Near East, and Tunisia in North Africa. It should be noted that some North African countries not represented in C.C.I.R. Study Group XI in Oslo have not made their preference known; this is the case, for instance, for Morocco and the United Arab Republic.

It seems now certain, unfortunately, that there will be two different colour-television systems in Europe. France, the Federal Republic of Germany, the United Kingdom and the U.S.S.R. announced their intention to start regular public colour-television services in the autumn of 1967, France and the U.S.S.R. using SECAM III, Germany and the United Kingdom using PAL.

This situation is unfortunate because it is going to complicate the exchange of programmes, whether by live relays or in the form of tape recordings. Moreover, receivers will cost more because of the lack of standardisation and the receivers to be used in the vicinity of the PAL-SECAM III "frontiers" will be still more complex and expensive. There is nothing that can be done now, but to try to remedy these drawbacks as much as possible. It is for the industry to tackle the problems of the receivers and especially the problem of the two-system receivers for use close to the frontiers. That is not an easy task considering that there are also different standards to be taken into account, not only because of the different number of lines but also because of the various 625-line standards adopted in the various countries. As far as the exchange of programmes is concerned, it will be necessary to develop transcoders for passing with a minimum loss of quality from SECAM III to PAL and vice versa and the E.B.U. is already organising work with this aim on the international plane. Provision will also have to be made to facilitate the exchange of programmes between North America in 525-lines: 60 fields (NTSC colour) and Europe in 625 lines: 50 fields (PAL or SECAM III colour), which is a more complicated problem as there is not only a transcoding operation, but also that of converting between systems having different numbers of fields and lines. This conversion problem also is being dealt with by the E.B.U. on the international plane and happily, a converter incorporating field- and line-storage by means of delay devices is being developed by the B.B.C. It will also be necessary to locate the transcoders on the Eurovision Network in such a manner as to avoid transcoding in cascade. Furthermore, the performance of the radio-relay circuits must be such as to transmit satisfactorily PAL and SECAM III signals in 625 lines as well as NTSC signals in 525 lines. Facilities for measuring the signals and monitoring the pictures will have to be provided on the radio-relay network wherever needed, which implies further – and rather urgent – work for the Telecommunication Administrations and broadcasting organisations in Europe; the E.B.U. is willing to undertake its co-ordination.

This, then, is the situation after the Oslo meeting of the C.C.I.R. I am sorry, after having reported year by year in the World Radio TV Handbook on colour-television systems for Europe, to have in the end to record this rather disappointing conclusion.

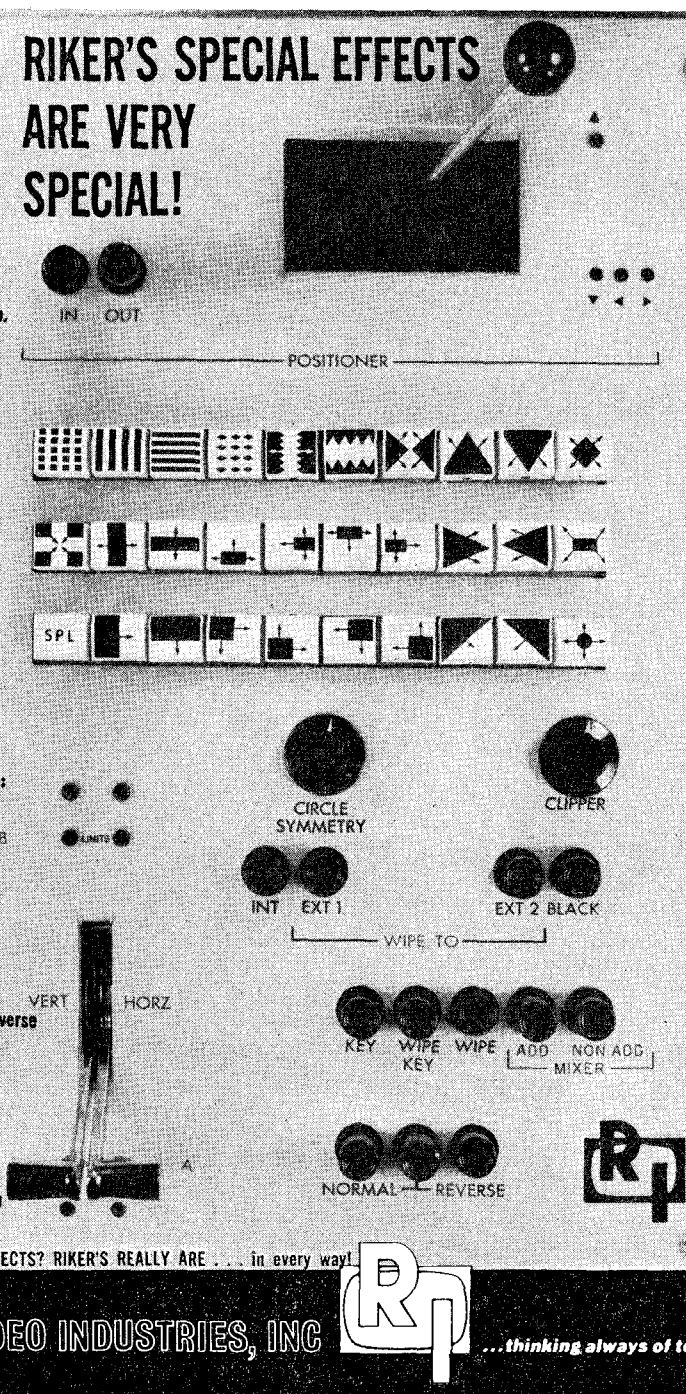
RIKER'S SPECIAL EFFECTS ARE VERY SPECIAL!



You start with a basic 9 Wipe all-transistor system. Plugging in one additional module gives you 29 different basic wipes that can multiply into thousands by using two or more buttons simultaneously . . . thousands more than any other. Push-button selection allows instant changes of wipes "ON AIR". Expanding the Riker system is as simple as plugging in modules.

Here are modes of operation:
Key
Wipe
Wipe/Key
Mix/Wipe
Additive Mix
Non-Additive Mix
Non-Additive Mix/Wipe
Normal, Normal-Reverse, Reverse
Rainbow Insert
"Joy Stick" Positioner
Electronic Spotlight
Camera Scan Positioner
Modulated Wipes
Comp or non-comp operation

SPECIAL EFFECTS? RIKER'S REALLY ARE . . . in every way!

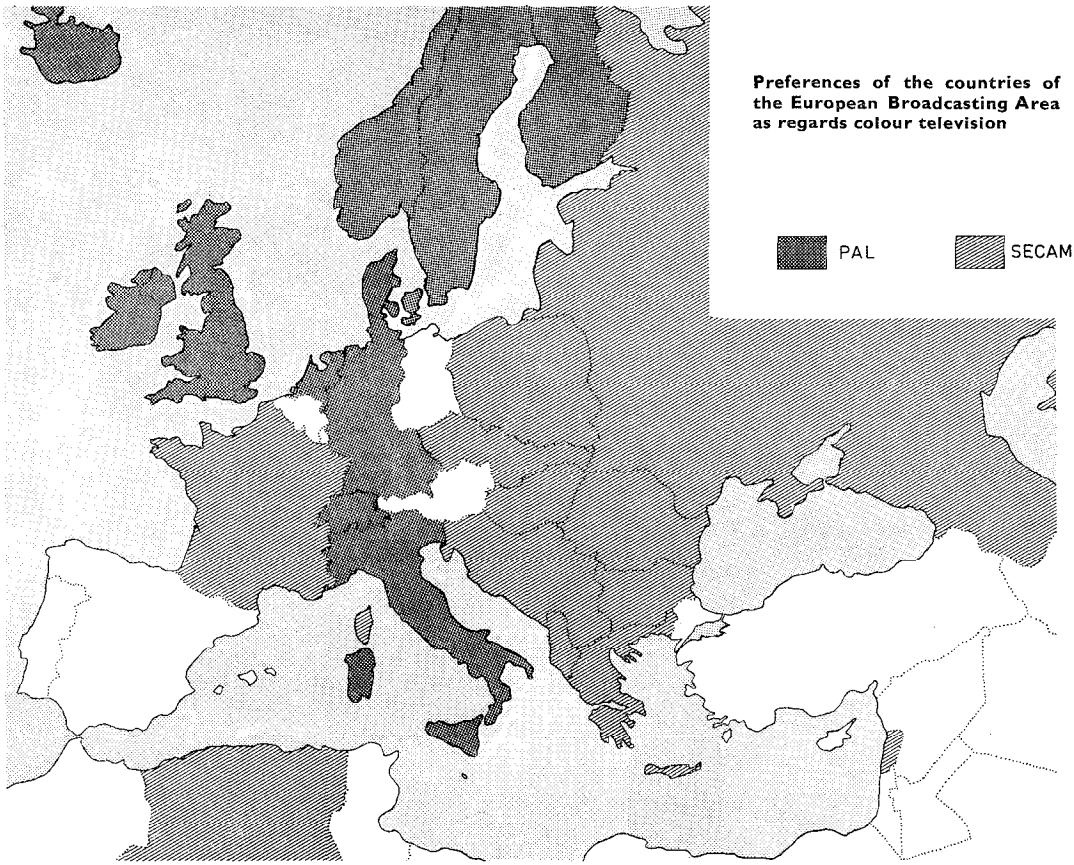
Color-Television Standards for Europe *(Continued from page 28)*



This map of Europe indicates the countries whose delegations had, at the end of the C. C. I. R. XIth Plenary Assembly in Oslo, opted in favour of the PAL system or of the SECAM (or SECAM III) system. The countries depicted in white are those not represented in Oslo or whose delegations either expressed no preference, abstained or opted in favour of the SECAM IV system.

A MESSAGE FROM THE EDITOR

This edition of the WORLD RADIO TV HANDBOOK has been extended and kept up-to-date with the advice of specialists and consultants in the field of radio and television to assist those who desire to obtain as complete and practical information as possible about the various radio and TV stations throughout the world.

It has been our aim with the 1967 edition to enable everyone to have a complete and practical basis on which to start or continue listening to broadcasts (on shortwave in particular) from near and far-away countries and thus create the possibility for a better international understanding.

The WRTH 1967 has been written and compiled for *you* entirely. Consequently we will be more than happy to receive your criticism and suggestions with regard to improving and extending the contents of the present edition.

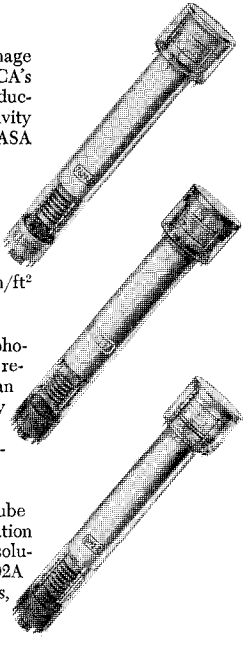
It would be impossible to list all the names of the many people whom we have consulted about the new material – friends who have made valuable contributions to this book. We thank them for their help and patience.

I want to thank specifically the many broadcasting and TV organisations, radio clubs, faithful contributors, advertisers, etc., who have made this edition possible.

J. M. Frost
Editor

From bright sunlight to overcast starlight

RCA thin-film semiconductive targets in Image Orthicons offer exceptionally stable performance in B/W and color TV



The RCA line of camera tubes includes three Image Orthicons—7629A, 7967, and 8092A—equipped with RCA's latest advance in TV technology, thin-film semi-conductive targets. They offer the high gain and tube sensitivity that can be equivalent to photographic film with an ASA exposure index of more than 10,000,000.

RCA-7629A. Easy to set up and simple to operate, this Image Orthicon makes possible very low-light-level studio operation and remote pickup. It is excellent for industrial service, taking good black-and-white pictures with scene illumination as low as 2 to 3 lm/ft^2 ... equivalent to film with an ASA index of 20,000.

RCA-7967. This Image Orthicon, with a multialkali photocathode features low target-to-mesh capacitance, reduced microphonics, and S-20 spectral response. It can reproduce black-and-white scenes under extremely low-light-level conditions. Its sensitivity is equivalent to photographic film having an ASA index of ten million or more!

RCA-8092A. An Image Orthicon with field mesh, this tube makes possible full color pickup with scene illumination as low as 40 lm/ft^2. A quality tube noted for high resolution over a wide range of incident light levels, 8092A is available in sets of 3 with color-mated characteristics, with the designation 8092A/S.

Check into RCA's line of Image Orthicons. You'll find the one that's right for your special application. See your local RCA distributor. For technical data, write to RCA International Division, Department 200, Central & Terminal Avenues, Clark, New Jersey 07066, U.S.A.

INTER-CONTINENTAL TELEVISION PROGRESS 1966 - FUTURE 1967

By Edgar T. Martin, Engineering Manager and George Jacobs, Chief Frequency Division Voice of America, U. S. Information Agency, Washington, D. C. 20547.

From its beginning on July 23, 1962, when the TELSTAR-1 satellite forged the initial link between Europe and North America, the evolution of inter-continental television has been marked by astonishing progress. The success of TELSTAR-1 was followed shortly by equally successful demonstrations of inter-continental television relays from the RELAY-1, TELSTAR-2, RELAY-2, SYNCOM-3 and MOLNIA-1 experimental communication satellites.

On June 28, 1965, three short years after the initial TELSTAR-1 television relay, a new era began for inter-continental television. On that date the EARLY BIRD satellite was placed into commercial service, marking the transition from the purely experimental to the commercial era for satellite communications.

During 1966, the concept of commercial satellite communications became af age, and with it, inter-continental television. Tens of millions of viewers in North America and Europe witnessed history in the making – live and immediate – as a result of the EARLY BIRD satellite. Inter-continental television relays became relatively commonplace through EARLY BIRD, and by October no fewer than 89 television programs, for a total time of 87 hours, had been relayed through the satellite. Thirty-six of these originated in North America and included such highlights as Gemini manned spacecraft launches, heavyweight championship boxing matches and Presidential news conferences. An equal number originated in Europe, highlighted by the British elections, President De Gaulle's visit to Russia, the World Cup Soccer matches, and heavyweight boxing matches. Fifteen television programs were relayed through EARLY BIRD from ships at sea, bringing to listeners in both Europe and North America live coverage of Gemini spacecraft "splash-downs" and recoveries. The technical quality of the programs relayed by EARLY BIRD rivalled that of local television broadcasts.

At a cost of approximately $ 7,500 for a minimum ten minute period, and $ 160 for each additional minute ($ 4,400 and $ 85 a minute during off-peak times), the EARLY BIRD satellite makes available to the broadcasting networks and organizations in North America and Europe a means for inter-continental relay of news and special event television programs on a sheduled, commercial basis.

The full significance of the EARLY BIRD satellite goes beyond the mere transmission of words and pictures. The satellite is owned and operated by INTELSAT, which stands for International Telecommunications Satellite Consortium.

INTELSAT is a world partnership to build, own and operate a single global commercial communications satellite system at the earliest practicable date, but with a goal set for 1967. The following 53 countries are presently participants in the INTELSAT effort, and several others are expected to join in the near future: Algeria, Argentina, Australia, Belgium, Brazil, Canada, Ceylon, Chile, China (Rep.), Colombia, Denmark, Ethiopia, France, Germany (Fed. Rep.), Greece, India, Indonesia, Iraq, Ireland, Israel, Italy, Japan, Jordan, Kuwait, Lichtenstein, Libya, Lebanon, Malaysia, Morocco, Monaco, the Netherlands, New Zealand, Nigeria, Norway, Pakistan, Portugal, Saudi Arabia, Singapore, South Africa, Spain, Sudan, Sweden, Switzerland, Syria, Thailand, Tunisia, United Arab Republic, United Kingdom, United States of America, Vatican City, Venezuela and Yemen. The EARLY BIRD satellite, or INTELSAT-1 as it is also called, and all future satellites in the INTELSAT system, are paid for and owned on a proportional basis, by

GEORGE JACOBS

George Jacobs was born on July 16, 1924, in New York City. He received his B.E.E. degree from Pratt Institute, Brooklyn, N. Y. and his M.S.E.E. degree from the University of Maryland in 1960.

Mr. Jacobs is a representative of the Interdepartment Radio Advisory Committee (IRAC) and several other policy-level U.S. Government committees in the field of telecommunications. He has served as a delegate to several international broadcasting and telecommunication conferences, including the 1959 ITU Administrative Radio Conference, where he was the U.S. spokesman for high frequency broadcasting.

Most recently he attended the ITU's International Space Communication Conference and the Eleventh Plenary Assembly of the International Radio Consultative Committee (CCIR). Mr. Jacobs was the U.S. Delegation's spokesman for satellite broadcasting at both conferences.

Mr. Jacobs is a Senior Member of the IEEE, a member of URSI, and a registered Professional Engineer in the District of Columbia.

EDGAR T. MARTIN

Edgar T. Martin was born on May 1, 1918, in Princetown, West Virginia. He received his B.S.E.E. in 1938 and his M.S.E.E. in 1953, both from Virginia Polytechnic Institute. He also holds an M.A. in Government from American University, conferred in 1957 and an LL.B. from George Washington University. In 1959, he earned his LL.M. from Georgetown University.

He is a registered Professional Engineer in Virginia and the District of Columbia, and he is also a member of the Virginia Bar. He has attended more than a dozen major international conferences dealing with broadcasting and telecommunications, and was a delegate to the ITU's Administrative Radio Conference held in Geneva.

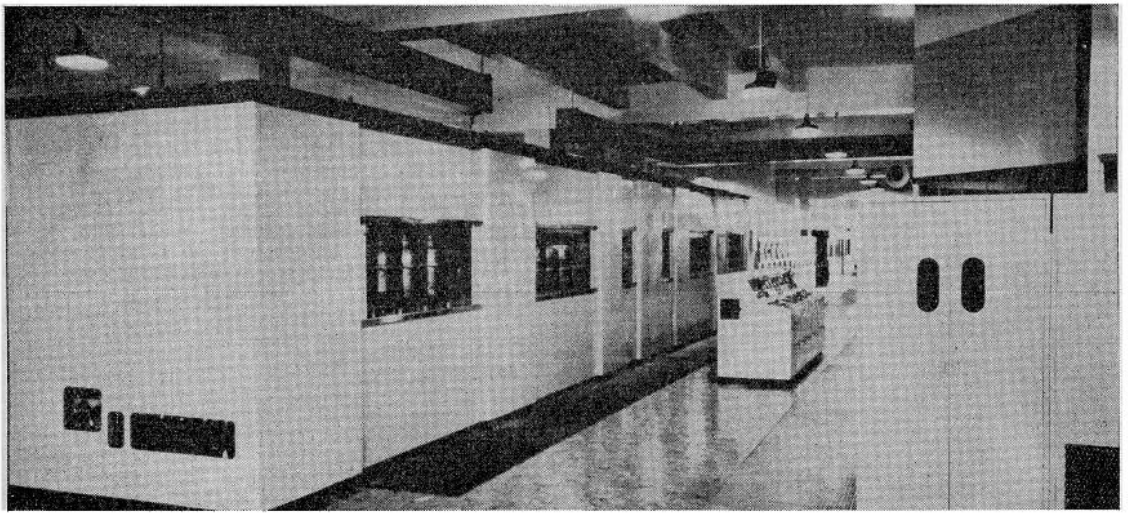
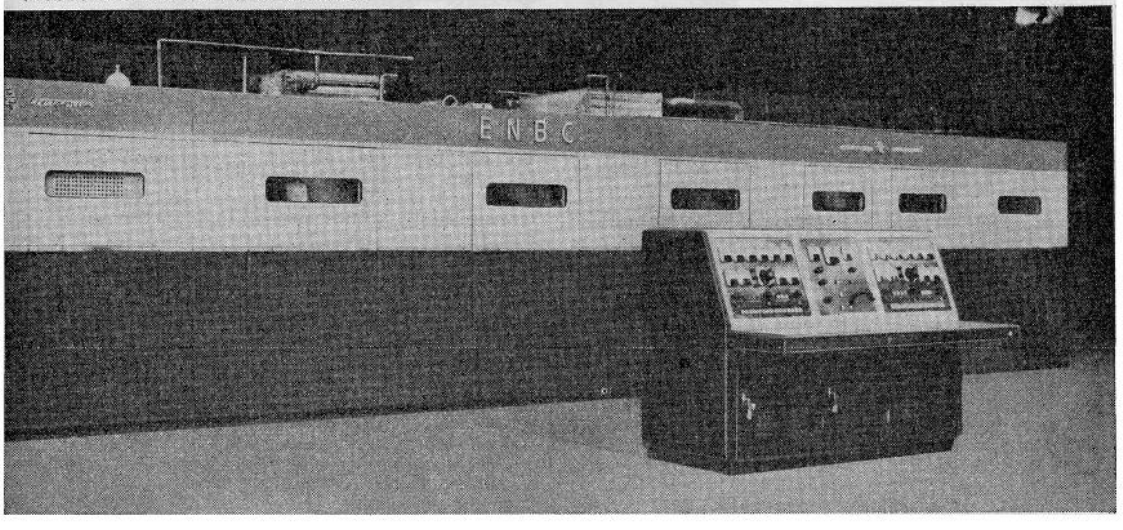
CONTINENTAL ELECTRONICS SUPER POWER TRANSMITTERS AROUND THE WORLD



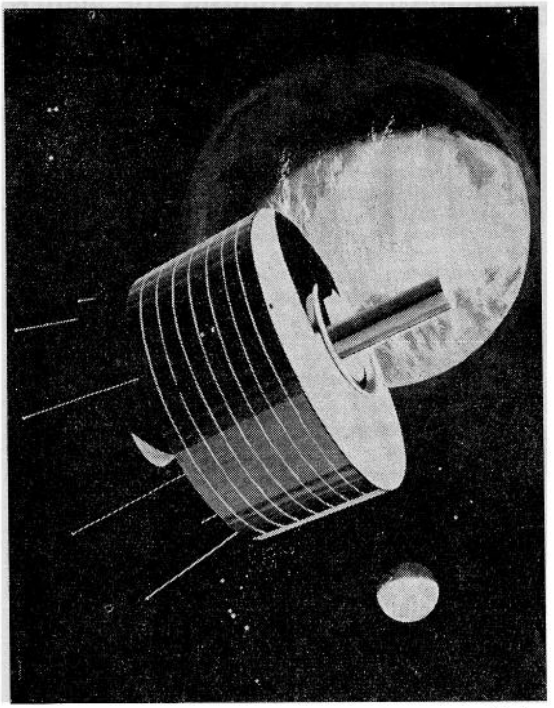
1,000,000 WATT MF BROADCAST TRANSMITTERS
Partial view of USIA's Philippine Relay Station shows Continental's 1,000,000 watt MF transmitter which has been operating since 1953. Continental is building a similar installation for the USIA in Thailand. Other Continental 1,000,000 watt transmitters are installed in Germany, Okinawa and Egypt. A sixth 1,000,000 watt transmitter was divided into two 500,000 watt transmitters for installations in Greece and the island of Rhodes.



500,000 WATT MF BROADCAST TRANSMITTERS
Continental's 500,000 watt MF transmitter for the Eastern Nigeria Broadcasting Company in Nigeria. Another Continental 500,000 watt MF transmitter was installed for Trans World Radio on the island of Bonaire in the Netherlands Antilles.

Continental transmitters range from 5,000 watts to 1,000,000 watts. For descriptive brochures, write: Continental Electronics Mfg. Co.; Box 17040; Dallas, Texas 75217.

Continental Electronics
A SUBSIDIARY OF LTV ELECTROSYSTEMS, INC.



This 56-inch INTELSAT-2 satellite, larger and more powerful than Early Bird, is scheduled to be in operation by the Fall of 1966 to link North America with countries in the Pacific area. Looking down from its synchronous perch 22,300 miles above the Pacific, the satellite initially will link the earth stations to be constructed by the Communications Satellite Corporation at Paumalu in Hawaii, and Brewster Flat, Washington, as well as earth stations in Japan and Australia. Additional earth stations are expected to be built in the future by other Pacific area countries. Like Early Bird, now bridging the Atlantic between North America and Europe, the more powerful satellite will be capable of relaying inter-continental television programs. (Intelsat Photo)

each member of the consortium. The Communications Satellite Corporation (COMSAT) represents the U.S.A. on INTELSAT, and acts as manager on behalf of the 53-nation consortium.

On July 29, COMSAT, acting on behalf of INTELSAT, signed an agreement with the U. S. National Aeronautics and Space Administration (NASA) providing, on a reimbursable basis, launching and associated services by NASA for two new INTELSAT commercial communication satellites to be launched during the fall of 1966. The agreement also covers a possible additional launching to replace EARLY BIRD, presently in use over the Atlantic Ocean, when a replacement is needed.

The two new satellites, to be called INTELSAT 2A and 2B, will be placed into synchronous orbits, one over the Pacific Ocean to link eastern Asia with the western part of North America and the other over the Atlantic Ocean to link most of Europe, Africa and the Near East with the western hemisphere. The new satellites will have two and a half times the power of EARLY BIRD, will contain 240 channels and will be capable of inter-continental television relay.

Planning for further expansion of its globe-girdling commercial communication satellite system, INTELSAT has under construction four huge satellites, each containing 1200 channels and capable of simultaneous transmission of at least two television relays. It is planned to orbit two of these giant satellites over the Atlantic Ocean, one over the Pacific and the other over the Indian Ocean, by 1968.

Another significant step in the development of inter-continental television took place on April 25, 1966, with the successful launching of the MOLNIA (Lightening)-1C satellite by the Soviet Union. Two other MOLNIA satellites were launched during 1965. According to Soviet officials, the MOLNIA satellites furnish a fourteen-hour daily communications and television link between the Moscow and Vladivostok centers, over a distance of 7500 kilometers (4500 miles). They are also reported to have the capability of transmitting three hours a day from Russia to North and Central America. During 1966, MOLNIA-1C was used successfully to conduct experimental color television transmissions between Paris and Moscow.

The possibility of using satellites for broadcasting radio and television programs directly to home receivers continued under active investigation during 1966. At Oslo, Norway, several hundred engineers, scientists, and government officials from more than 90 countries gathered this summer for the 11th Plenary Assembly of the International Radio Consultative Committee (CCIR). The CCIR, a specialized committee of the International Telecommunications Union, is responsible for studying technical and operating problems in the field of radio communications. The subject of broadcasting satellites came under discussion at the Oslo meetings, and the world's experts on this subject drafted a comprehensive study program dealing with the problems relating to the development of such a satellite. The CCIR will endeavor, between now and the next Plenary Assembly which is scheduled to convene in 1969, to determine the answer to such questions as what frequency bands are most suitable for satellite broadcasting; can frequencies be shared between satellite and terrestrial broadcasting stations; what field strength and transmitter power will be required to produce a satisfactory signal from a broadcasting satellite at a home receiver, and what are the optimum orbital and transmission parameters for such a satellite. The CCIR, recognizing that there are significant variations between television transmissions standards throughout the world, also recommended that the study determine if a new, world-wide television standard could be developed for satellite broadcasting, and if satisfactory results can be obtained with such a standard on existing receivers with a minimum number of changes to the receiver, or by the use of relatively simple and inexpensive adapters. The study will also investigate the possibility of designing future television receivers with the capability of receiving broadcasts directly from satellites as well as from terrestrial stations.

While the development of a direct broadcasting satellite is under active study by the world's experts, there are a number of complex problems remaining to be solved before it can become a reality. It has been estimated that, except perhaps for experimental transmissions, a satellite capable of broadcasting television programs directly to home receivers could be ten or more years away.

An interim step to a broadcasting satellite may be the use of a high power satellite for relaying television programs to a network of specially designed earth receiving stations, which would then rebroadcast the programs to home receivers through conventional terrestrial television stations. The receiving stations would be considerably less complex and less expensive than the earth stations used in conjunction with communication satellites, and could be located at terrestrial television stations. The Ford Foundation has recently proposed such a

SOLAR ACTIVITY IN 1967

by Prof. Dr. M. Waldmeier, Zürich.

Prof. Dr. M. Waldmeier

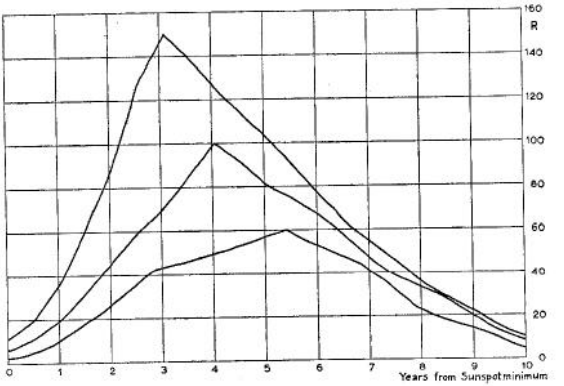
Sunspot activity was at its minimum in July, 1964. After that time the activity first increased but slowly. Throughout the year 1965 the sunspot-numbers remained at almost a constant level. It was only in April 1966 that a rather sudden and strong increase of solar activity occurred. Table 1 gives the monthly sunspot-relative-numbers from the year of minimum through August 1966. These numbers are calculated by the following formula: $R = k\,(10\,g + f)$, f being the total number of spots, g the number of spot-groups and k a coefficient to reduce the personal countings to the Zürich standard scale of the relative-numbers R. These numbers are now known for more than two centuries.

The mean length of the sunspot cycle amounts to about 11 years. In general the time of increase from minimum to maximum is shorter than the interval of declining activity. The length of the ascending branch may be as short as 3 years and as long as 7 years. Its mean value is about 4 years. Therefore the next maximum of sunspot activity may be expected for 1968.

Table 1. Monthly Sunspot-Relative-Numbers 1964–66

	Jan.	*Feb.*	*Mar.*	*Apr.*	*May*	*June*
1964	15.3	17.7	16.5	8.6	9.5	9.1
1965	17.5	14.2	11.7	6.8	24.1	15.9
1966	26.7	23.5	24.5	47.5	43.7	46.4
	July	*Aug.*	*Sep.*	*Oct.*	*Nov.*	*Dec.*
1964	3.1	9.3	4.7	6.1	7.4	15.1
1965	11.9	8.9	16.8	20.1	15.8	17.0
1966	55.7	48.8				

More reliable predictions can be made by using the properties of the sunspot curves, and this is the method by which the author has predicted the sunspot maxima of the years 1937, 1947 and 1957. To eliminate the month by month fluctuations of the sunspot-numbers we use the so-called smoothed sunspot-numbers; these are 12-month running means of the observed numbers. The largest smoothed sunspot-number R_M characterizes the cycle. R_M varies strongly from one cycle to another. For cycles of weak activty R_M may be as low as 49, whereas for the strongest cycle on record R_M was 201. The mean value of R_M is around 100. In Fig. 1 three curves for the smoothed sunspot-numbers are given, namely for R_M = 60, 100, and 150 respectively. The whole run of a single sunspot curve is determined by the corresponding value of R_M. If R_M can be predicted, the value of R at any given time can be calculated. For example it follows from Fig. 1 that R_M increases as the rising time T from minimum to maximum decreases. This relationship can be expressed by the formula: $\log R_M = 2.73 - 0.18\,T$, when T is measured in years. The individual sunspot curves differ largely at the beginning of the cycle: a slow increase leads to a low maximum that comes late, a steep increase is followed by a high maximum with a short rising time. Up to August 1966 the rising branch of the sunspot activity fits best into the curve for R_M = 110. With this value and the above mentioned formula one gets T = 3.8 and consequently for the time of sunspot maximum May 1968.



If the individual sunspot curves corresponding to different values of R_M are superposed in such a way that all the maxima are coinciding, then all the curves intersect near the point R = 50. This point is 1.8 years ahead of the sunspot maximum. As we are now in the middle of the ascending branch, it should not be difficult to make a prediction for the time when the smoothed sunspot-numbers will have reached the value 50. This seems to be the case in June 1966. Therefore the maximum has to be expected for April 1968. With this value and with R_M = 110 one gets the following predictions for the smoothed sunspot-numbers: 60 for the beginning of 1967, 90 for the end, and 74 for the mean. During the last solar cycle a similar level of activity was observed at the end of 1955 and at the beginning af 1961. Therefore conditions of short wave communications in 1967 will be similar to that of these two earlier epochs.

FINLANDS DX-CLUB INTERNATIONAL

the Club for You!

Club paper ATTENTION B, 10 times a year including up-to-date DX-hints and features written by experts on DX-ing.

Membership fee only US $ 2.00 or 15 I. R. C's a year (by air mail to Europe and North America US $ 3.00 or 23 I. R. C.'s.

McMartin Goes Piggyback

New LT-10, 3-watt transistor-amplifier, mounts piggyback on our SCA Multiplex TRANSISTOR Receiver, TR-66.

Here's new convenience for background music operators. For small installations with few speakers, use the LT-10 for amplification. It just plugs in — no wiring necessary. ■ Our transistor receivers have many special features and conveniences. Modular construction permits easy replacement of power supply, main channel or sub-channel circuitry. Servicemen always appreciate the plug-in transistors and straight-line design with convenient test points. No other manufacturer can guarantee sensitivity of 2 uv/50db or crosstalk of -55db or better. ■ McMartin is the leading producer of SCA Multiplex Receivers. The workmanship of McMartin Receivers is guaranteed *forever*. We can make this bold warranty because 20% of our production people are in final testing of your equipment.

RADIO BROADCAST RECEPTION CONDITIONS EXPECTED DURING 1967

By George Jacobs, Chief, Frequency Division, Voice of America, U. S. Information Agency, Washington, D. C. 20547

By international agreement, broadcasting stations are allocated the following specific bands in the radio spectrum:

LONG WAVE (Low Frequency)		MEDIUM WAVE (Medium Frequency)	
Kilocycles	Meters	Kilocycles	Meters
150–285	1053–2000	525–1605	187–571

SHORT WAVE

Tropical Broadcasting Bands

Kcs.	Megacycle Band	Meter Band
2300–2495	2	120
3200–3400	3	90
4750–5060	4	60

HIGH FREQUENCY BROADCASTING BAND

Kcs.	Megacycle Band	Meter Band
3900– 4000	3.9	75
5950– 6200	6	49
7100– 7300	7	41
9500– 9775	9	31
11700–11975	11	25
15100–15450	15	19
17700–17900	17	16
21450–21750	21	13
25600–26100	25	11

While the majority of the world's broadcasting stations operate within these bands, some operate outside. Most out-of-band operations, however, take place on frequencies adjacent to, or on the edge of the bands allocated for broadcasting.

The Long-Wave band (used in Europe) and the Medium-Wave Band (used worldwide) while allocated mainly for domestic broadcasting, are used also for some international broadcasting to adjacent countries. Although long and medium-wave stations are normally heard only for moderate distances, long-distance reception is possible over dark transmission paths, mainly during the fall, winter and spring months in the reception area.

The Tropical Broadcasting Bands are assigned for use for domestic broadcasting in tropical areas, where high atmospheric noise levels limit the service area of medium-wave stations. DX reception on these bands is best when the transmission path between the transmitter and receiver is all or mostly in darkness. These bands are used mainly by stations in Latin America, Africa, South and Southeast Asia, and Oceania.

The High Frequency Broadcasting Bands, or short-wave bands as they are also called, between 3.9 and 26.1 megacycles (11 and 75 meters) are used for both international and domestic broadcasting. These bands are allocated for worldwide use, except that the 3.9 and 7 Mc bands are not allocated for broadcasting in the American area. Also, the 3.90 to 3.95 Mc portion of the 75 meter band is used only in Asia and Oceania.

Reception conditions on these bands vary according to the time of day and season of the year. Most of the international broadcasting stations make seasonal changes in frequency usage, mainly on the first Sunday of March, May, September and November. Changes may often be made at other times during the year, due to interference, change of program times, addition of new transmitters, etc. A large percentage of the domestic broadcasting stations operating in the high frequency bands do not make seasonal changes, but some, particularly the stations in India, Pakistan, USSR and South Africa, do make seasonal shifts.

Short-wave, long-distance medium, and long-wave broadcast reception is possible only because of the existence of an electrified region high in the earth's atmosphere. This region, electrified by nature, is called the *ionosphere*. It is the ionosphere, acting somewhat like a mirror, that reflects radio signals over great distances.

The ionosphere is believed to be caused, at least in part, by ultraviolet radiation given off by the sun. The amount of radiation illuminating the ionosphere varies hourly, seasonally and geographically, depending upon the relationship between the sun and the earth. Reception is usually better on the higher frequency bands (15, 17, 21 and 25 Mc) when the sun is more directly overhead or closer to the earth, for example, during the daylight hours, during the winter season, and in tropical or southern regions. Reception in the lower frequency bands (3.9, 6, 7, 9 and 11 Mc) is usually better when the sun is lower in the sky, or farther from the earth, for example, during the hours of darkness, during the summer season, and in temperate and northern geographical areas.

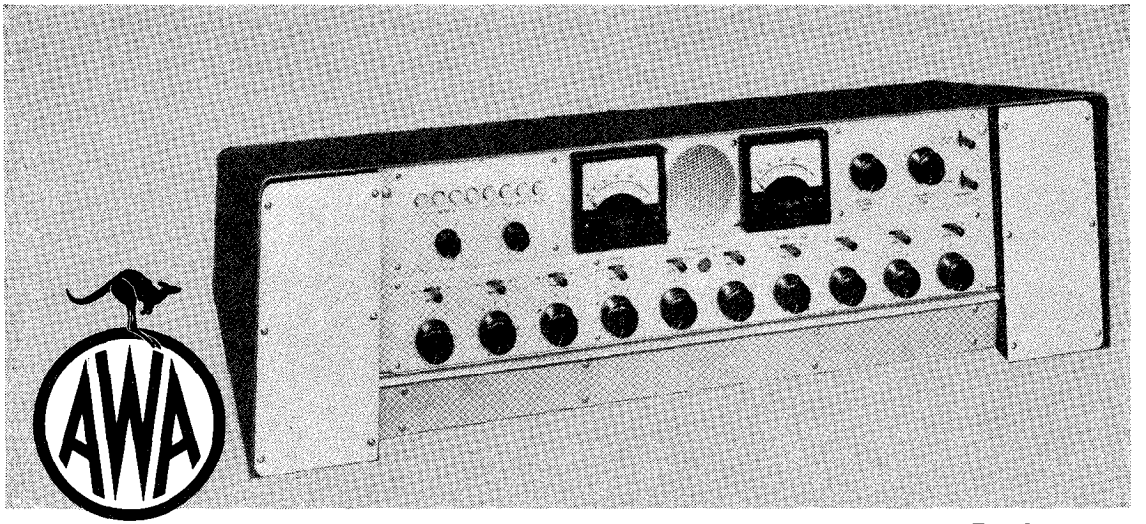
In addition to hourly, seasonal and geographical changes in reception conditions, there is a year-to-year change over an approximate 11-year cycle.

For reasons not yet fully understood by scientists, this 11 year cycle change appears to result from the difference in the number of sunspots appearing on the face of the sun. When the sun's surface is covered with a great number of spots, the ionosphere is electrically strong and long-distance radio reception is often at its best; when the number of sunspots diminishes, reception becomes poorer. During 1957–61, when the sunspot cycle was at or near its maximum, reception conditions were at their best. During the years 1963–66, there were few sunspots on the face of the sun, and reception conditions were considerably poorer.

A new sunspot cycle began during October, 1964, and the number of sunspots are now on the increase. According to solar observations made with powerful telescopes at the Zurich Solar Observatory, the new cycle began with a sunspot number of 10, and climbed slowly to a level of approximately 60 by the end of 1966. Sunspot activity during 1967 is forecast to increase to a level of approximately 100 by the end of the year. This is a moderately high level of solar activity, and should result in a noticeable improvement over last year in short-wave reception conditions, especially in the 11, 13, 16 and 19 meter bands.

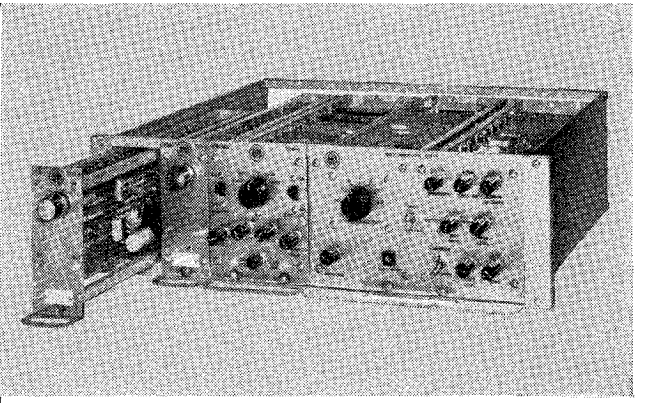
The following is a general summary of reception

Continued page 44



Australia's largest manufacturer of Broadcast and Television Equipment

AWA manufactures a comprehensive range of broadcast and television transmitters. Two out of every three broadcasting stations in Australia and New Zealand have been designed and built by AWA while over 100 television transmitters have been supplied, or are on order for Australian and overseas stations. As a major manufacturer in this field the Company can offer a wide range of the latest transistorised sound and vision equipment.



TOP: *10 Channel transistorised sound control console.*

P.O. BOX 2516, SYDNEY, N.S.W., AUSTRALIA

Radio Broadcast Reception Conditions

(Continued from page 42)

conditions expected on each short-wave broadcasting band during 1967:

25 Mc band (11 meters)
As the sunspot cycle rises, more and more stations are expected to use this band for long-distance broadcasting. During 1967, it should be possible to receive a fair number of stations in this band, over distances of many thousands of miles during the daylight hours. World-wide reception will be best during the late fall, winter and early spring months, and it should be possible to receive stations located in southern and tropical regions throughout the year.

21 Mc band (13 meters)
Reception of exceptionally strong signals over distances of many thousands of miles, from almost all areas of the world should be possible during the daylight hours, or when it is daylight at one end of the path, and early evening at the other end. With the level of sunspot activity forecast for 1967, many stations will use this band more and more throughout the year, and considerable congestion is expected.

17 Mc band (16 meters)
Excellent long-distance reception of stations from all areas of the world should be possible in this band throughout the year from shortly after dawn through the early evening hours. Since many stations are expected to use this band during 1967, a high level of congestion is expected to occur.

15 Mc band (19 meters)
Propagation conditions in this band are expected to be excellent for the reception of both long-distance stations many thousands of miles away and stations from medium distances of a thousand miles, or so. The band is expected to be full of stations with exceptionally strong signals from shortly after sunrise, through the daylight hours and into the early evening. During the summer months, excellent reception may often be possible during the nighttime hours as well. Exceptionally long-distance reception is more likely to occur for a short period after sunrise, and again during the late afternoon and early evening hours. Medium-distance reception should be best during the late morning and afternoon hours.

11 Mc band (25 meters)
This is expected to be an excellent band for medium-distance reception during the hours of daylight. During this period, at any season of the year, exceptionally strong signals should be received from stations that are between approximately 600 and 2200 miles away (1000 and 3750 km). Long-distance reception from stations several thousand miles away, should be possible for a short period after sunrise, and again during the late afternoon and early evening hours. During the summer months, long-distance reception also should be possible during the hours of darkness.

9 Mc band (31 meters)
This band is expected to be excellent for daytime reception over short-to-medium distances on the order of 400 to 1500 miles (700 to 2500 km). Fairly good long-distance reception, over many thousands of miles, should be possible throughout the year during the early evening hours, through the hours of darkness and until shortly after sunrise.

7 and 6 Mc bands (41 and 49 meters)
Excellent short-range reception is expected on these bands during the daylight hours for distances up to approximately 1000 miles (1750 km). During the fall, winter and early spring months, when local atmospheric noise levels are at their lowest values, fairly good medium and long-distance reception should be possible from shortly before sunset, through the hours of darkness and until shortly after sunrise. High static levels are expected to make long-distance reception somewhat difficult during the late spring and summer months.

4, 3, and 2 Mc bands (60, 90 and 120 meters)
These bands are mainly used for short-distance reception. During the hours of daylight, stations within a radius of a few hundred miles should be heard well. After sunset, and throughout the hours of darkness, the reception range increases, and during the late fall, winter and early spring months, good reception also should be possible of medium and long-distance stations within a radius of several thousand miles. During the summer months, high static levels are likely to limit reception in these bands to short-distances.

For more specific reception information please refer to the Table of the Most Suitable Meter Bands for 1967 (see page 60).

Inter Continental Television

(Continued from page 38)

distribution system for a nation-wide educational television network in the United States. The proposal is presently under study by the Federal Communications Commission.

In 1966, the concept of inter-continental television came of age. The year 1967 is expected to see continued progress in this field. INTELSAT satellites are expected to link almost all of the world's continents during 1967, and several additional ground stations are expected to be brought into service to supplement those already in operation in the United States at Andover, Maine, Hawaii and the state of Washington, at Goonhilly Downs, England; Pleumeur-Bodou, France; Raisting, Germany; Fucino, Italy; Grinon, Spain; Tokyo, Japan and Nova Scotia, Canada.

An invitation to tender has been issued recently for an earth station at Hong Kong. The station is planned for late 1967 operation, with the INTELSAT-2 Pacific satellite. It will link Hong Kong with existing earth stations in Japan, Hawaii and the state of Washington, and with earth stations planned for Australia, the Philippines and other locations in Southeast Asia.

The impetus responsible for the astonishing development of inter-continental television during the past four years shows no signs of slackening, indeed it appears to be gaining momentum. In light of developments during 1966, it can be predicted with confidence that the goal of a global commercial communication satellite system, with the potential for world-wide inter-continental television relay, will become a reality during 1967.

Silicon transistors used throughout the chain to give outstanding stability and reliability. Constant output ensured despite mains variations, temperature changes or external fields. Easy access for tube changing. No image orthicon setting up controls.

SIMPLE CONTROL

Simple compact control panel, four of which can be mounted on a console desk, gives complete 'hands off' operation.

MINIMUM RACK SPACE

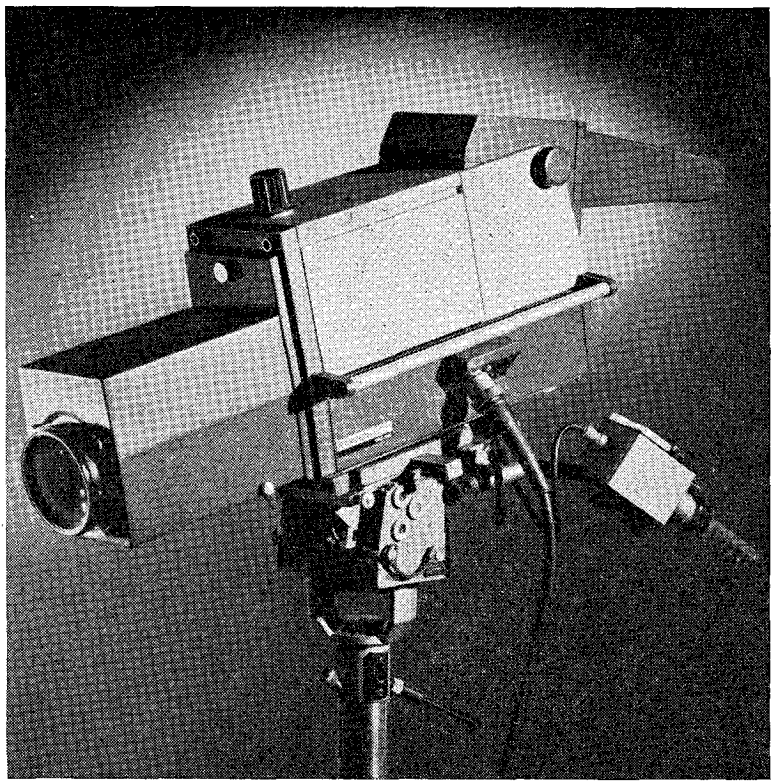
Single rack mounting camera control unit, control panel and power supply. Circuitry contained in seven plug-in printed wiring modules, giving easy front access for maintenance.

INTEGRATED ZOOM LENSES

Choice of servo or manually controlled zoom lenses gives infinitely variable focal length for exact picture framing. Simplified camera operation and improved programme continuity.

TILTING VIEWFINDER

Ensures most comfortable viewing position for all camera angles. Detachable up to 30 ft. from camera. Brilliant picture (200 ft.-Lamberts). Camera, external or mixed signals available at cameraman's choice.



The smallest, lightest 4½ in. Image Orthicon Camera in production, as simple to operate as an ordinary amateur photographic camera

SHORTWAVE RADIO AND THE IONOSPHERE

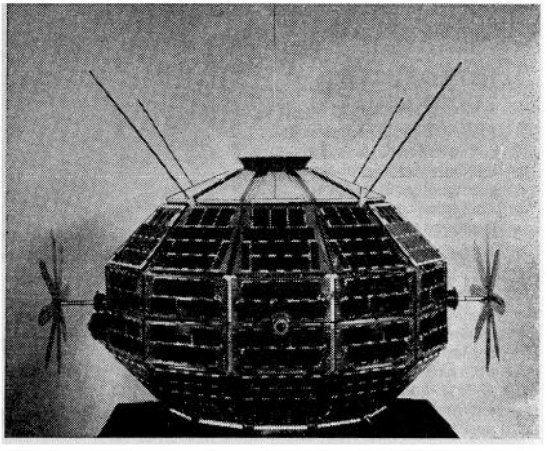
by Basil Duke, President – Radio Canada Shortwave Club.

S. B. Duke

What IS the ionosphere? And what part does it play in shortwave radio? Many new SWL and DXers will have asked themselves these questions – and well they might. Because, unless you have at least a basic knowledge of the tools of your hobby, you cannot get the maximum efficiency and enjoyment out of your listening equipment. For one thing, shortwave radio engineers follow exacting techniques when scheduling the shortwave bands in which their radio stations operate. Their decisions, which vary from season to season and year to year, are influenced by the behaviour pattern of the ionosphere – which in turn is influenced by the level of sunspot activity, the season of the year, daytime and night propagation conditions, and so on. Therefore, some understanding of these factors may protect you from long hours of frustration. For instance – trying to receive North American or European stations in the 21 Mc/s band at about 2100 GMT during winter months during low sunspot numbers. So – to return to our original question. What IS the ionosphere? Its influence on shortwave radio transmission and reception will, we hope, become clear to you as we proceed with our discussion.

The ionosphere consists of a number of layers of ionized gases enclosing our atmosphere like a shell, or, like a series of mirrors surrounding the earth at various heights. The lowest layer at about 60 miles above the earth (that's approximately 90 km), to the highest at about 280 miles (or 450 km), depending upon the season of the year and the time of day or night. In fact, one could say the ionosphere is a "mirror in the sky". A mirror which reflects radio waves, electro-magnetic waves of certain types, back to earth. Without the ionosphere, long-distance radio communication would be impossible by shortwave.

How does the ionosphere reflect these radio waves back to earth after they have left the shortwave transmitter? To understand this, we must first understand the structure of our ionosphere and the nature of radio waves. In 1901, Marconi succeeded in sending a wireless signal from Cornwall in southwest England to Newfoundland, and in so doing, raised a problem. How was it possible for a radio wave to travel in a straight line BEYOND THE HORIZON and be picked up by a receiving station located *over* the horizon? It was then already known that radio waves must travel in straight lines. Or so it was thought! Furthermore, ground waves would not be able to follow the curve of the earth's surface far enough, to reach that distant receiving antenna in Newfoundland. Then Kennelly in the United States and Heaviside in England suggested, both about the same time, that the air in our outer atmosphere was different to that at ground level. That, in fact, the earth was surrounded by a layer of electrified conducting air or gas which was capable of reflecting radio waves back to earth instead of permitting them to escape into outer space. At THAT time it was only a theory proposed independently by these two scientists and it was not until 1924 that Sir Edward Appleton, the British radio physicist, using the Bournemouth standard-band transmitter of the BBC, experimented and actually proved the physical existence of the Kennelly-Heaviside layer, or the E layer as we now call it. In the years 1924 and 1925, Appleton and his co-workers made many such experiments and found that the structure of the ionospheric region was not as simple as was first believed. For example, they found that the ionosphere was composed of not *one* reflecting layer of ionized gas, but several, lying one above the other. Furthermore, the degree of ionization in these layers was found to vary from hour to hour, day to day, season to season, and even over much longer periods – over years! Since those days, the techniques of ionospheric measurement – or SOUNDING as it is called, have improved considerably. There are now many ionospheric sounding stations located in countries all over the globe. Rocket sounding programs have been in progress for some years and there is the important part played by Canada's "Topside Sounders". These are the artificial satellites Alouette I and Alouette II, constructed by the Defence Research Telecommunications Establishment in Ottawa, and programmed to measure ionospheric densities, critical frequencies and so on, from ABOVE the ionosphere. Both of these Canadian ionospheric sounding satellites have been extremely successful and they have considerably expanded our knowledge of the ionosphere (see photographs).



FORMATION AND STRUCTURE OF THE IONOSPHERE

The ionosphere is created by energy radiated by the sun. That is, by solar ultra-violet and X-ray radiation. This is most strikingly evident during an eclipse of the sun when the intervention of the moon blocks off this radiation and prevents it reaching our atmosphere. At such times, density of ionization falls especially in the top-most layer, the F-layer and its ability to reflect the higher fre-

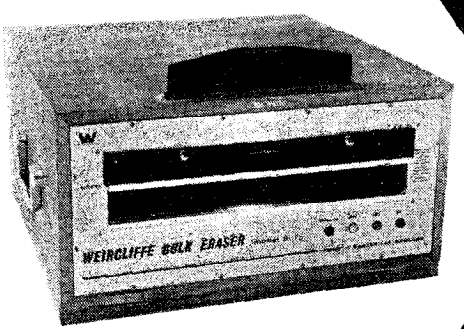
do you use tape

Weircliffe bulk tape erasers



MODEL 8 (NATO CAT Nº 5835-99-972-5371)

TIME FOR ERASURE ..... 6–10 secs	CAPACITY ..... 100–250 tapes per hr
DEGREE OF ERASE .. better than 80dB below a saturated 1k/c signal	OPERATING VOLTAGE ... 200/240v 50~ or 115v 60~
TAPE/FILM WIDTH ..... ¼"–2" video	CURRENT (INTERMITTANT) 15A
SPOOL SIZES ..... up to 14½" max	DIMENSIONS ..... 21" x 20" x 10½" 52 x 51 x 27 cm
SPOOL TYPE ..... any	
OPERATION TIME ..... unlimited	WEIGHT ..... 92 lbs – 42 kg

Other erasers in the Weircliffe range include:—

MODEL 6 For tape widths of ¼" to 1" instrument and video on spools up to 8¼" diameter.

MODEL 7 For continuous tape cassettes (cartridges) not exceeding 8" square and 1" deep.

MODEL 10 For 26" diameter spools of cine film 35mm-70mm (sound track language redubbing).

MODEL 14 The only commercially available conveyor belt system suitable for continuous operation and having an erase capability of 1200 tapes per hour of all widths up to 2" video on any spool diameter up to 14½". Degree of erase better than 90dB.

THROUGHOUT THE WORLD WEIRCLIFFE ERASERS HAVE THE APPROVAL OF TAPE MANUFACTURERS, BROADCAST AND TV AUTHORITIES, MANUFACTURERS OF INSTRUMENT, DATA AND COMPUTER EQUIPMENT AND CIVIL AND MILITARY GOVERNMENT DEPARTMENTS.

Shortwave Radio and the Ionosphere

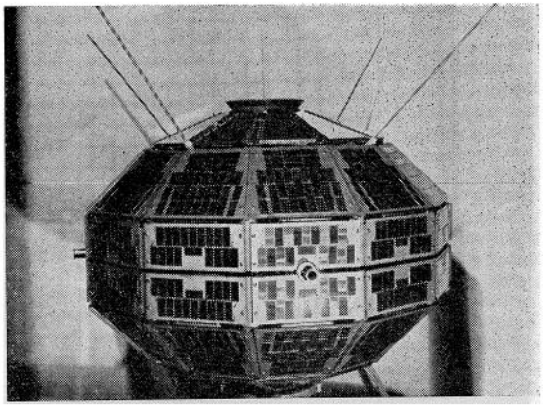
(Continued from page 46)

quencies, the 16 and 19 metre bands is drastically weakened. There are also many variations in the degree of ionization especially of the E and F layers between night and day and between summer and winter. All this evidence indicates that the ionizing agent is indeed radiation emitted by our sun. And if final proof is needed, we have only to watch the behaviour of the international shortwave broadcast bands over a sunspot cycle. During years of high solar activity, the 13 metre band (21 Mc/s) is crowded, and is popular for North Atlantic circuits. But during low sunspot years, very few radio stations can be heard in this band, except perhaps on a few north-south circuits.

The lowest layer, that is the one nearest the earth, is the D layer or, more professionally, the D *region* of the ionosphere. The D region is located about 50 miles (that is 80 or 90 km) above us. It is in the D region that most of the absorption of shortwaves occur. D region ionization is at maximum at local noon and disappears about local sunset and with it – D region absorption. This is why it is possible to hear distant standard-band (medium wave) radio stations after dark and which are not normally audible during daytime. The D layer is not effective in reflecting the higher frequencies back to earth, that is, frequencies above 6–7 Mc/s, and so plays only a minor role in long distance radio communication.

The lowest layer which begins to have a significant part in DXing is the E region, at about 80-90 miles, approximately 150 km above the earth. By the way, in discussing the heights of these regions or layers, we usually indicate the height of the *centre* of each region with the layer spreading out on either side of the height indicated. The E (or Kennelly-Heaviside) region is only significant during daylight hours when it is sufficiently ionized by the sun to reflect shortwaves. It is a region of reasonably high atmospheric density and thus its ionization will vary with the height of the sun, or the angle of the sun with respect to the layer. After sundown, ionization density drops rapidly and the region is no longer able to refract shortwaves. But, as the sun begins to climb above the region's horizon, layer density quickly increases to maximum again, at about local noon. This daily change in regional ionospheric density is called the "Diurnal variation" and it applies to a certain extent to the other ionospheric regions.

The highest layer of ionized gases is the F region, or Appleton layer, after the famous radio scientist Sir Edward Appleton who discovered it. The structure of this region is quite complex and, in fact, at times splits into two layers called the F1 and the F2. The F region is the most important for long-distance radio communication. It is the most intensely ionized of the layers and its height, between 180 and 280 miles (300 and 450 km) varies with the time of day, season of the year and solar activity. Ionization normally reaches a maximum shortly after noon local time and thereafter begins to decrease slowly to a minimum just before local sunrise. Immediately after sunrise, ionization density increases rapidly until maximum is reached once again soon after local mid-day. During winter and summer daytime, the F region divides into two distinct layers but this division is much more pronounced during summer daytime than it is in the winter months. During the summer season, the F1 is centered around the 200 km level (about 130 miles) while the F2 maximum ionization is at 450 km (or 280 miles). During winter daytime however, this separation is very much reduced with the F1 at 200 km (130 miles) and the F2 at 300 km (or 190 miles). Thus less than 100 km separates the F1 and F2 during winter daytime, whereas in summer this separation increases to approximately 240 km. During the hours of darkness in winter and summer, the F region remains as one layer centered at about 350 km, or 220 miles. So you can see that the structure and behaviour of the F region is really quite complicated. Incidentically, you may be interested to know that it was Sir Edward Appleton who initiated the system of using letters to designate the various regions of our ionosphere. Starting with the letter F (for the F region) in 1925 because, he said, this will still leave several letters available for allocation to other layers which might be discovered above or below the three already named, the D, E, and F regions. However, to this day there have been no further discoveries and it has not been necessary to use any more letters.



IONIZATION PROCESS

The next step in our study of the ionosphere is to determine what the term "ionization" means? How are these layers of gases ionized? We already know the ionizing agent. Solar emission of ultra-violet and soft X-rays. But what causes these layers of gases in our outer atmosphere to become electrically conducting so that they can reflect radio waves? Gases, like all material or matter, are composed of atoms. And, in turn, atoms are composed of a positively charged nucleus around which revolve electrons which carry a negative charge. The whole being in a state of balance, or to put it scientifically, in a state of hostile symbiosis! Now, the wavelength of the solar radiation, the ultraviolet or X-ray radiation, is so short that an interaction can occur between it and the atomic structure, the atom. A tremendous force is exerted on the atom. So much so in fact, that it dislodges or splits off an electron. Such a dislodged electron is called a "free" electron and it now exists as a separate negatively charged particle. The atom which has lost the electron is no longer neutral but now has a positive charge and is called an "ion". Hence the term "ionization". Thus if we remember that an essential feature of an insulator is that its electrons are immovable within their parent atoms, i.e they cannot be dislodged, then a gas which has been ionized possesses the property of an electrical conductor. There is a flow of electrons, therefore a flow of elec-

Shortwave Radio and the Ionosphere

(Continued from page 48)

tricity. Remember those "free" electrons. And so when the ionospheric regions are ionized, a flow of free electrons is in process and the whole region acts upon radio waves as if it were a conductor or an electrical "reflector". Actually, "refractor" is the better term. Ionospheric density is not uniform throughout each region. There are clouds, ledges, ridges and sporadic formations of ionization at different levels. Nor does ionization density vary uniformly with the latitude or height of each region or layer. The density of ionization is maximum at the centre of each region and gradually thins out towards the upper and lower limits of the region. And so gradually region merges into region. Thus, even in space there is no *real* vacuum.

SKYWAVE REFRACTION

A radiowave is an electro-magnetic wave travelling at the speed of light, i.e. 300,000 kilometres, or 186,000 miles per second. Its shortwave frequency can be anywhere between 3 and 30 Mc/s, determined by the frequency to which the transmitter is tuned. The degree by which a radio wave is refracted or "bent" by the ionosphere depends upon two important factors. These are, the density of ionization present in the layer at that particular time, and the frequency or wavelength of the radio wave. Thus, if the ionization is *dense* enough and the frequency *low* enough, a radio wave entering the layer *vertically* will be refracted back to earth. This is a remarkable demonstration of the ability of the ionosphere to reflect electro-magnetic waves. It is exactly this technique which is used by ionospheric sounders to determine the height and density of the various regions. These soundings are made at certain times each day in many areas of the world. But if the frequency is *too* high and the layer density *too* low, the radio wave will penetrate the layer and proceed on into outer space and of course be lost to any ground-based receiver. It is in between these two extremes that ionospheric refraction of shortwave radio signals takes place. The condition we have just considered is typical of the way skywaves are refracted by a single region. But when several layers are involved, e.g., the E and F1 layers, the radio wave's path is much more complex. It is even possible for a signal to be "trapped" between layers and so lost to a ground-based receiver.

SUNSPOT ACTIVITY

A long-distance radio signal "skips" or "hops" between the ionospheric layer and the earth's surface during its passage from transmitter to receiver. At least that is what happens under normal ionospheric conditions. But unhappily the ionosphere is not always quiet and well-behaved. As we have just seen, it contains ridges, ledges, columns and clouds of ionization of various densities, which scatter radio waves just as a splintered mirror will scatter light. Also there are ionospheric storms and disturbances, some of which are caused by eruptions in the sun or those infamous sunspots – which are worth a book to themselves, for they are *really* fascinating. There is the aurora which is usually indicative of a disturbed sun and ionosphere and there are SID's – or Dellinger fade-outs, geomagnetic disturbances of the earth's magnetic field and the complicated relationship between the Van Allen belts of radiation and our ionosphere. But let us concentrate on sunspots for a moment and their effect on shortwave radio and the ionosphere. Many of you will have read or heard about the eleven-year sunspot cycle, so-called because of the eleven-year period between the maximum phases of sunspot activity. Actually, it isn't exactly eleven years from maximum to maximum (or minimum to minimum) but near enough. Maximum phase means of course that the sun's face is at its spottiest and minimum phase means that period of the cycle when the sun is least spotty. And like a human face, spottiness is an indication of disturbed health! You may be interested to know that the recent maximum phase which reached its peak in the late summer of 1958 was the highest ever recorded since sunspot cycle records were first started in, I believe, 1749. We can expect the next sunspot maximum during 1968 and present indications point to a maximum even higher than the record high of 1958. The last minimum was in July 1964 when the observed sunspots count went down to 3.4. Since we know that ionization of our upper atmosphere is due to solar radiation, the general result of more sunspot activity is an increase in ionization thus increasing critical frequencies – the highest frequency transmitted vertically by an ionospheric sounder but still refracted by the ionosphere. Higher critical frequencies mean higher maximum usable frequencies and *this* means increased use of the higher international shortwave broadcasting bands such as 13 and 16 metres. Conversely, when sunspot activity is *low*, or at minimum phase as during the summer of 1964, ionization decreases and this means lower critical frequencies, low maximum usable frequencies and *this* means increased usage of the lower frequency bands, i.e. 31, 41 and 49 metres. Anyone who has listened to these bands during minimum phase knows that means increased congestion, overcrowding, insufficient frequency separation between stations and greatly increased interference. So far so good. But, what *is* a sunspot? What causes them? Well, although they are among the most thoroughly observed and studied astronomical phenomena, the mechanism of their formation still remains very much a mystery. Many theories have been advanced from many parts of the world but none of them have so far found universal acceptance. They could perhaps be likened to great storms, cyclones in fact on the face of the sun. They appear darker than the surrounding surface of the sun, the photosphere, because they are cooler, that is lower in temperature by some thousands of degrees. So their appearance is actually a matter of contrast. Sunspot sizes can and do vary enormously and some are larger then the surface of our own earth. The largest so far recorded was observed on April 7, 1947 and its area exceeded 7,000 million square miles. Under a "quiet" sun, the ionosphere undergoes a number of regular normal variations; geographical, seasonal, diurnal and with the progress of the sunspot cycle. These are normal variations. But what happens when the sun is disturbed? Which is more likely to happen when sunspots are numerous.

RADIO BLACKOUTS

Solar activity, such as flares, causes extra radiation to be emitted by the sun. Bursts of radiation which cause abrupt changes in certain areas of the ionosphere. A disturbed ionosphere means radio waves are not refracted smoothly or perhaps not reflected back to earth at all. This may lead to a complete failure of long-distance radio communication. A "black-out" in fact. These solar disturbances are of two distinct types the most dramatic being the SID (Sudden Ionospheric Disturbance) or "Dellinger fade-out", named after the late Dr. J. H. Dellinger

fully transistorized.

- This "fully transistorized equipment" uses arack of 19" and allows the conversion of television channels according to CCIR standard.
- Conversion possibility:
  Band I/Band III: Band III/Band I: Band III/Band III.
- Output power: 250mW peak video.
- Threshold sensibility: 3,5 μV.
- Power supply: from mains 220/110V$_{CA}$ – 30% + 20% 50 ... 60 Hz: consumption 71 VA; from battery 48 V – 20% + 30% consumption about 42 W.
- Size: Width 482mm, height 261mm, depth 255mm.

- The repeater P 3149 can be supplied with an electronic tubes amplifier for power supply from mains 220/110 ±2%, 50 ... 60 Hz, by means of which in the executions P 152 and P 153 it is possible to increase the output power respectively to 1 W and 5 W peak video.

Shortwave Radio and the Ionosphere

(Continued from page 50)

of the United States National Bureau of Standards who first observed it in 1935. These sudden radio fade-outs are now conclusively linked to solar flares. Their effect on shortwave radio reception is most impressive. Everything appears to go dead even background noise disappears. The resulting blackout may last for a few minutes or a few hours. Although the whole skywave portion of the radio spectrum may be affected, usually it is the lower frequencies which are most affected with long-distance communication sometimes possible above 25 Mc/s. Intense ionizing radiation from the solar flare penetrates the normal ionospheric layers to greatly intensify ionization at the 70 to 90 km level, the D region. With this appreciable increase in D layer ionization, absorption of skywave signals is increased to the point where no electro-magnetic energy remains to be refracted by the E or F regions. But frequencies above approximately 25 Mc/s are sometimes able to penetrate this temporarily heavily ionized D region for reflection by one of the higher layers. So much for the "Dellinger" or radio fade-out. The other type of radio disturbance is the Ionospheric Storm, not so swift in its sudden onset or so dramatic in its effect as the SID but a "communications killer" none the less. The ionospheric storm constitutes the major type of disturbance to shortwave radio communication and its effects can be much more prolonged, sometimes for days at a time. Even trans-Atlantic telephone and telegraph cables have been seriously affected. Now, while the SID is usually confined to the sunlit side of the earth, the ionospheric storm can happen at anytime during day or night. The general symptoms are, lower signal strengths and an increased rate of fading – perhaps leading to complete radio blackout. Usually the higher frequencies are affected first and as the disturbance deepens, all normally usuable frequency bands become unusable. Recovery is gradual and the circuits most affected are those passing through the auroral zones. During this type of storm, the F layer ascends to an abnormally great height and becomes very unstable and even totally disrupted. The ionospheric storm is associated with the emission of solar corpuscles. The arrival of the solar corpuscular steam in our ionosphere causes the storm. In spite of extensive study over the years, we have as yet, no reasonable theory to explain the sudden increase in D region ionization – as in the SID, or, the sudden increase in height of the F layer – as with the ionospheric storm. But, here we should pause a moment. We must be sure to differentiate between the *beneficial* effects of a slow, general increase in sunspot activity which improves shortwave propagation conditions and the drastic effects of the various types of solar disturbances, flares, sudden increases in sunspot activity and so on, which seriously impair radio communications.

In this article we have done no more than skim over the surface of a highly complex and very technical subject. Many physicists and shortwave radio engineers spend their lives in investigating only one or two aspects of the various matters we have considered here. The more we find out about our outer atmosphere, the more complicated its structure seems to be. When Alphonse the Wise heard the Ptolemaic system of the Universe explained, he said "if the Lord Almighty had consulted me before embarking on the Creation, I would have recommended something simpler". I think we would all be inclined to agree with him!

AERIALS - THE WHY AND WHEREFORE

by Jim Vastenhoud.

Jim Vastenhoud

Improving shortwave reception is the wish of many listeners, but not all realize that this is invariably connected with the suspension of a good aerial. This being so, some information on aerials seems to be called for. The problem of aerials can play an important role in places where the possibilities for aerial construction are limited and the most favourable alternative must be found. In this article we hope to give you an insight into aerials and aerial construction. We can only deal with a few types, which one might call the most popular outside, window-sill and indoor aerials, in the hope that you will want to do some experimenting in order to improve the reception of your set by taking all the signal available and paying the necessary attention to correct matching between the aerial and the radio.

Basically, an aerial is a so-called open resonance circuit: the extensiveness of capacities and inductances makes it suitable for radiating or receiving electro-magnetic waves. For shortwave long distance reception especially the electrical component of these waves is important as the magnetic component dies out rather quickly. For medium wave (SB) reception however, it is the magnetic field which induces signals in the aerial, and that's why the application of built-in ferrite types has taken such a flight. Aerials designed for receiving the electrical component of the radiated signal are so-called capacitive aerials. Examples are the horizontal and vertical wire, the whip, the dipole, the ground plane and variations of these. Concentrating on the horizontal wire or to the inverted "L" aerial, we can mention some properties which influence its performance:

proper insulation
height
length
material used
radiation resistance
matching to the receiver
presence of local interference sources

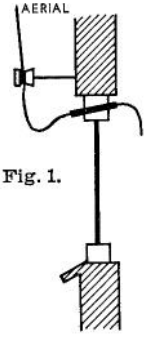

Fig. 1.

Outside insulation is mainly by pyrex glass or glazed porcelain insulators. The most commonly known is perhaps the "egg"-type, of which more than one is generally used because high frequency losses occur over dirty or wet insulators and when we extend the length of the insulating material, loss will consequently be smaller.

As the aerial is outside and the receiver inside, a lead-in must somehow be made. Usually, the wooden window-frame is the favourite spot for this. Drill a small hole in it and stick the sleeve of an old ballpoint-pen through it, so that it can serve to feed the aerial wire through. To prevent water from penetrating into the room, arrange this as indicated in figure 1.

Keep the length of wire inside as short as possible, and insulate it. If a piece of insulated wire is connected to the aerial coming in, clean both sides thoroughly over a few inches. The joint should preferably be soldered, or otherwise properly connected and insulated with insulation tape (to prevent oxydation).

The height of an aerial is important, but it is also necessary to suspend it as free as possible from (conducting) obstacles and overhead power lines. To fulfil this condition one will often want to make use of trees. To keep the wire straight in this case, we recommend the use of a pulley and counterweight, as illustrated in figure 2. The final insulator of the aerial should be kept outside the branches a couple of feet to allow for annual growth.

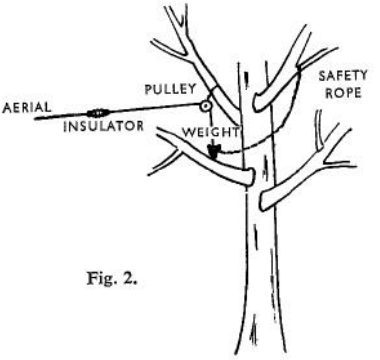

Fig. 2.

The length is not unlimited, but depends on local conditions. Generally speaking, any length between 20 and 85 feet will do. If it is made too long, however – more than three times the highest waveband tuned to – it assumes clearly directive properties. In the case of the 21 MHz band (13 metres), the aerial should not exceed 95 feet. For the purpose of matching, the greater the length the better.

The aerial should be made of weather-resistant material. Good conductivity metals are to be preferred: hard-drawn copper wire, twisted copper wire or copper-clad steel wire are favourites. The use of plastic or rubber insulated wire is allowed. The mechanical strength must be sufficient to withstand not only its own weight but also high winds.

Radiation resistance is an imaginary resistance, in which as much energy is dissipated as radiated in reality. In other words, a high radiation resistance indicated a high aerial efficiency. The radiation resistance of a horizontal half wave aerial*) is 73 ohms, but increases when we make it longer. All types of aerial have their own characteristic radiation resistance.

The aerial should be matched to the receiver with wire of the proper characteristics. This plays an important role in the case of tuned aerials, or where it is necessary to use shielded wire, e. g. when

*) The actual length of a "half-wave" aerial is about 10% less than half the wavelength tuned to.

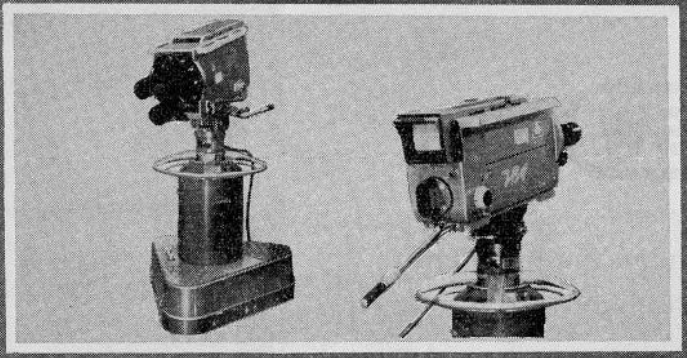
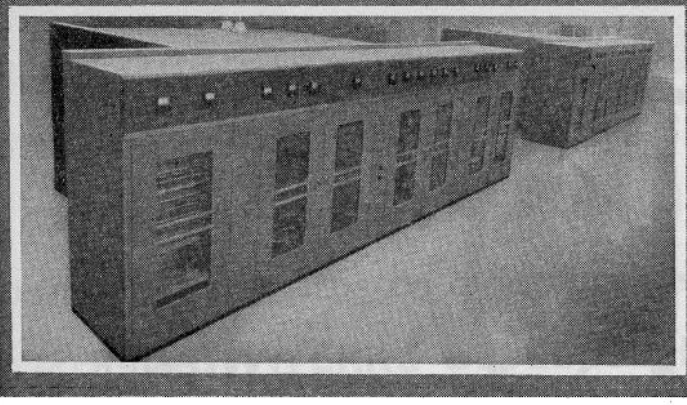
TOSHIBA BROADCASTING EQUIPMENT –
top choice for top quality



The IK-44, Toshiba's latest development in monochrome TV cameras, features a pick-up tube only 4.5 inches in diameter. Full transistorization reduces size, weight and power consumption. What's more, the IK-44 can be used with **both** U.S. and European systems!

Although portable, this 11GC band TV relay equipment works as well as the fixed type, and has been designed for standard color TV systems. Specialy developed for wide band transmission, the klystron tube (11V 54A) performs excellently at high power output.



For over 35 years, Toshiba has been one of Japan's leading producers of transmission epuipment. Toshiba pioneered in the use of all-metal rectifiers, and full air-cooling of tubes in equipment up to 100 kW output. Shown here is a portion of the 300 kW equipment for the NHK broadcasting station at Hatogaya.

MODEL NO. FM 250A
250-WATT
FM BROADCAST TRANSMITTER

Only 23" wide, 26" deep and 48" high.

- MEETS FCC SPECIFICATIONS
- COLOR CODED WIRING
- DESIGNED FOR STEREO AND MULTIPLEX
- SILICON RECTIFIERS
- DESIGNED FOR REMOTE CONTROL
- PRE-TUNED TO CUSTOMER'S FREQUENCY
- NO NEUTRALIZATION REQUIRED
- SEPARATE TEST UNIT FOR ALL EXCITER FUNCTIONS
- MAXIMUM ACCESSIBILITY — WITHOUT SPECIAL TOOLS

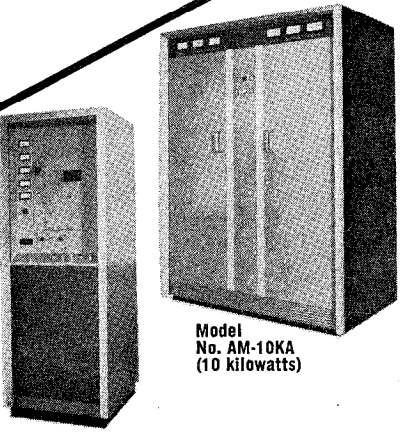
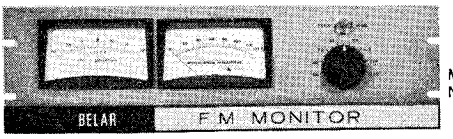
10-watt Exciter (also available separately as studio link)
Exciter Power Supply
Space for Stereo Generator or Frequency & Modulation Monitor
Transmitter Power Supply



Model No. AM-10KA (10 kilowatts)

Model No. AM-1KA (1 kilowatt)

FM FREQUENCY AND MODULATION MONITOR
in only 5¼" of rack space!
. . . fits inside Sintronic FM Transmitters



MODEL NO. FMM-1

Completely transistorized. Monitors *both* carrier frequency deviation *and* total modulation. Engineered for minimum distortion and cross talk, simplicity of operation and long, stable, trouble-free performance. Saves the broadcaster 35% as compared to the cost of separate monitors.

COMPLETE LINE OF SINTRONIC-QUALITY AM TRANSMITTERS
From 100 watts to 50 kilowatts

Write Dept. WRT for complete information.

Aerials - the why and wherefore

(Continued from page 54)

electrical interference is present. In the above-mentioned case, the shielded wire should be 75 ohms coaxial cable, the "characteristic impedance" of which is as close to the radiation resistance of the aerial as possible. The screening braid is grounded and the aerial connected to the centre wire. It must be stressed that the shielded part of the aerial does not catch signals at all, also preventing the spark interference to penetrate to the receiver. Under normal conditions, the use of coaxial cable is not recommended, because of its capacity.

With horizontal aerials, matching is not considered a problem. With vertical aerials – including the inverted L type – it is however an important consideration, because a bad match leads to loss in signal strength. The ratio between the length of a vertical aerial, such as a whip or rod aerial, and the wavelength of the station tuned to, determines the radiation resistance of the aerial. A quarter wavelength whip has 36 ohms, a half wavelength whip 105 ohms, which is much more favourable. However, we will not always be able to construct a half-wave length aerial, particularly if it has to be mounted on a window-frame. Recalling that the aerial is an open resonance circuit, it means that adding inductance or capacitance artificially will change its properties. To cut a long story short: adding a coil will increase its "length" (electrically speaking) and connecting a condenser in series with it will shorten it. The condenser, value appx. 200–400 uuF, is applied when the physical length of an aerial is too large. More important for city dwellers is the so called loading coil (fig. 3) which can make up for a too short whip as far as matching is concerned.

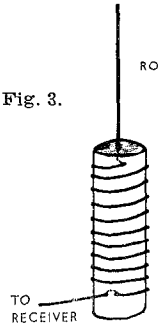

Fig. 3.

A typical loading coil (base loading) is wound on a 1¾–2 inch (4–5 cm) diameter plastic form and consists of 5 windings for the high frequency shortwave bands and up to 18 windings for the low frequency shortwave bands. The wire used in spatial windings is 1.3 mm (AWG 16 resp. SWG 18). Of course you need some experimenting to find the proper matching, but that's just what we want to encourage. Furthermore, it can be said that the shorter the aerial, the more attention should be paid to proper matching, good insulation and the like, because the "signal catching capabilities" are small due to the limited length.

To prevent static and to add the necessary top capacity, a metal ball or disk must be connected at the top of the rod.

Diagrams of matching units (filters) can be found in books on the subject, and are issued by some shortwave stations (Radio Nederland: aerial filter).

Indoor aerials should be avoided as much as possible, but sometimes there is no alternative. Remember that shortwave signals cannot penetrate metal roofs and reinforced concrete structures. Erect the aerial as high as possible and preferably alongside one or more windows, where signals can penetrate. Try some different positions to find the one which gives the best results with the radio tuned to a weak shortwave station.

Earthing is another important factor. In all aerial

The band selections have been made on the basis of both propagation conditions and operating schedules.
A dash in the band column indicates reception is not expected due to difficult propagation conditions or stations not normally operating in propagationally suitable bands.

Aerials *(Continued from page 59)*

calculations a "perfectly conducting" earth is assumed, but in desert areas this is seldom the case. Here, the performance of the aerial is not what it should be, and this is where the counterpoise comes in. It consists of a number of radials stretching from a point directly under the place where the aerial enters the house. The radials each have a length of 20–30 feet and are either bare and dug in, or insulated and laid on the soil.

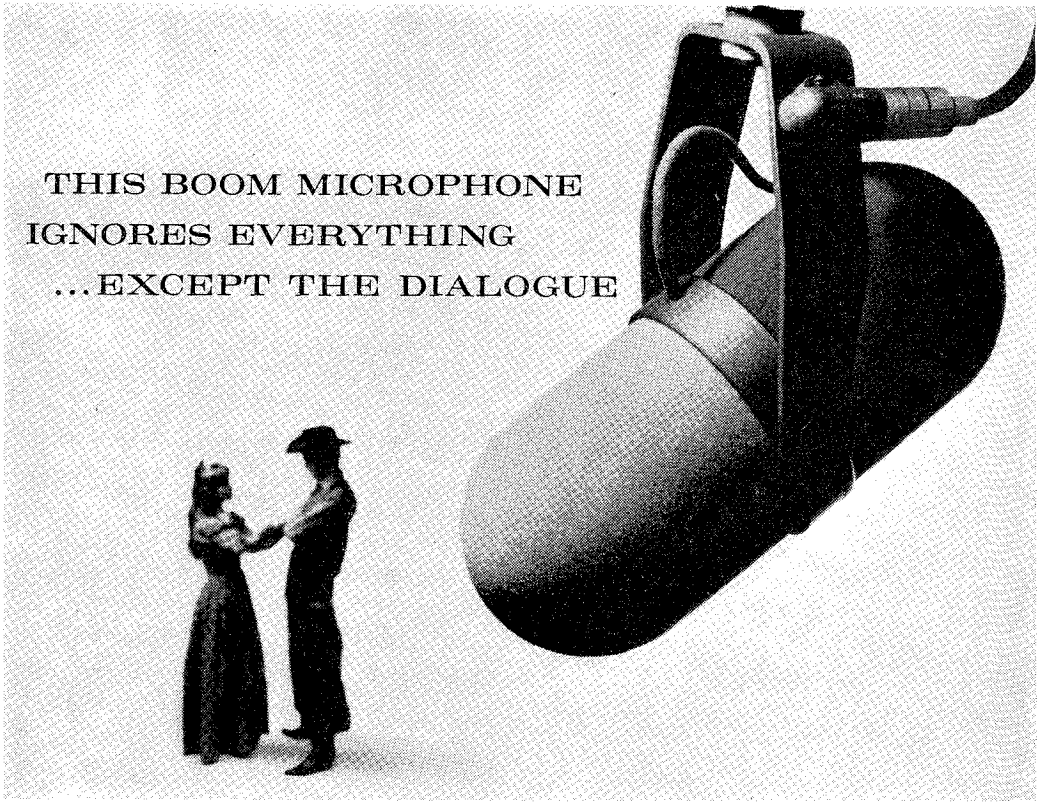
The purpose of this article will have been achieved if it is an incentive to you to do some experimenting. After all, it will turn out to be the cheapest way of improving your reception.

Repairing Your Radio:

We refer to article published in the Summer-Supplement 1966 page 18.

SVERIGES RADIOKLUBB is the oldest DX-club in Sweden. Our printed bulletin "DX-RADIO", mainly in Swedish, features a complete list of SW-stations with a unique time-schedule arrangement. Our members' service includes the famous bilingual reception report forms in English/Spanish and French/Portuguese as well as a long range of other DX-requirements. Annual dues: US $ 3.50; £ 1/2/0; DM 10. Sample copy of "DX-RADIO" and further information against 1 IRC. Write to: SRK, Box 5083, Stockholm 5, Sweden.

THIS BOOM MICROPHONE IGNORES EVERYTHING ...EXCEPT THE DIALOGUE



Consistency of sound track quality on an endless variety of locations and sets can be dramatically improved with the remarkable Shure SM5 Boom Microphone. It "hears" the dialogue rather than the ever-changing character of the surroundings.

Because its cardioid directional pattern is uniquely uniform with frequency and symmetrical about its axis, the SM5 is singularly independent of the effects of environment. Even in extreme shooting situations (such as with tight sets, low ceilings, hard walls, low microphone angles, traffic or air conditioner noise and rumble, and changing distance) the SM5 minimizes sound coloration and ambient noise pickup. Equalization changes — on the set or in transfer — are seldom, if ever, necessary.

The highly effective attached windscreen completely encloses the two-stage mechanical filter, so that there are no external "rubber bands" for the wind to "strum." The absence of response-correcting inductors or impedance transformers assures freedom from hum.

Call on the Shure SM5 to solve your most annoying boom problems!

For additional information and technical data write today, to: Shure Brothers, Inc., Export Department, 222 Hartrey Ave., Evanston, Illinois 60204, U.S.A.

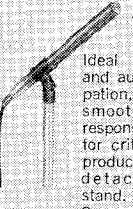
SHURE SM5

UNIDIRECTIONAL DYNAMIC BOOM MICROPHONE

SHURE PROFESSIONAL MICROPHONES . . . FOR BETTER AUDIO

MODEL SM58 CARDIOID DYNAMIC
Extremely versatile in studio, control room, and remote use. Also widely acclaimed for rhythm recording. Bright, clean sound. Exceptionally uniform cardioid pattern gives optimum control of environment.

MODEL SM33 UNIDIRECTIONAL RIBBON
Warm, smooth sound for studio, control room, and scoring stage. Super-cardioid directional pattern. Compact, yet rugged.



MODEL SM76 ¾" OMNIDIRECTIONAL DYNAMIC
Ideal for interviews and audience participation, yet unusually smooth wide range response (40-20 KC) for critical music reproduction. Instantly detachable from stand. Steel case with Cannon connector.

MODEL SM50 OMNIDIRECTIONAL DYNAMIC
Self-windscreened and pop-free for news, sports, remotes, and interviews. Also ideal for many studio and control room applications. Comfortably balanced for hand or stand use. Natural response.

STANDARD FREQUENCY & TIME SIGNAL STATIONS

The ordinary sw, listener soon notices a specialized technical prgr. of tones and time pulses usually received on carrier freq's of 2,5 5, 10 or 15Mc and sometimes on 20 and 25Mc, if he listens in that part of the spectrum. These signals have many uses in science and technology. They are most useful to the non-specialist in obtaining accurate time, in checking the calibration of his radio receiver, and in gaining information on radio propagation conditions. The forecasts of the present and future state of the ionosphere can be quite useful in determining the possibilities of sw-reception. The forecasts are given by WWV and JJY for certain parts of the globe.

R. STATION WWV, WWVH, WWVB and WWVL (Gov.)
St. WWV, Box 83-E, Route 2, Fort Collins, Colorado, USA: Eng-in-Charge. L. Honea. St. WWVH, Box 578, Puunene, Maui, Hawaii: Eng-in-Charge. S. Katahara. WWVB/WWVL, Box 83-E, Route 2, Ft. Collins, Colo, USA: Eng-in-Charge. R.F. Carle – **L.P:** Chief Freq. and Time Broadc. Sce's. D. H. Andrews, National Bureau of Standards, Boulder, Colo, USA.
Standard Radio Frequencies:
WWV 2500kc 2.5kW, 5000kc 10kW, 10000kckc 10kW, 15000kc 10kW, 20000kc 2.5kW, 25000kc 2.5kW: The broadc. are continuous, night and day, exc. from 45 min. to 49 min past each h – **WWVH** 2500kc 1kW, 5000kc 2kW, 10000kc 2kW, 15000kc 2kW: Continuous exc. from 15 min. to 19 min. past each h – **WWVB** 60kc 13kW Continuous – **WWVL** 20kc 1.8kW Continuous, except to permit exp. changes.
Program:
WWV transmits radio propagation forecasts in International Morse Code every 5 min's just preceding the voice ann's; the IUWDS "Geoalert" is broadc. in International Morse Code each h from WWV during the 19th min. and from WWVH during the 49th min. Universal Time is ann. from both st's in Intern. Morse Code each 5 min. At WWV a voice ann. of Mountain Standard Time is given each 5 min. as follows: "National Bureau of Standards, WWV, Fort Collins, Colo. Next tone begins at... hours,...minutes Mountain Standard Time. At WWVH a voice ann. of Hawaiian Standard Time is given each 5 min's as follows: "National Bureau of Standards, WWVH, when the tone returns Hawaiian Standard Time will be... hours, ... minutes". WWWB transmits a special time code consisting of 10db carrier reductions each second for 0.2, 0.5 or 0.8 sec (Format on request). Transmitted phase will be advanced 45° for 5 min. each h between 10 min and 15 min after the h. No special identification will be given. WWVL identifies by keyed carrier given the call sign in Intern. Morse Code on the h and every 20 min. thereafter. Immediately following identification, the freq offset (parts in 10^{10}) is given in Intern. Morse Code by keying the carrier, the word "minus" indicating the minus sign – **V.** by QSL-card or letter. **Pub:** Prgr. sched. on request. In addition to the 20kc carrier other exp. freq's near 20kc may be transmitted alternately or simultaneously.

STATION LOL
Addr: Observatorio Naval, Avenida Costanera Sur 2099, Buenos Aires, Argentina – **L.P:** Dir. Gen: J.E. Marpegán.
Standard Freq. and Signals: 5000kc 2kW – 100000kc 2 kW – 15000kc 2kW; 15 Oct. to last Feb: 11.00–12.00, 14.00–15.00, 17.00–18.00, 20.00–21.00, 23.00–24.00; 1 March to 14 Oct: D 12.00–13.00, 15.00–16.00, 18.00–19.00, 21.00–22.00, 00.00–01.00 – **Schedule:** 3 min dash (1000 or 440cs alternately) beginning at 00.00, 00.05, 00.10 etc. Then 3×LOL in morse followed by "Observatorio Naval Argentina" followed by hrs & min's, preceding dash tone. T.S. transmission at min. 55–59 in each h – **V.** by QSL-card or letter. Re. wanted.

STATION VNG– AUSTRALIAN POST OFFICE
Addr: Station VNG, c/o Assistant Dir. Gen, Radio Section, Postmaster-General's Dept, 57 Bourke St, Melbourne C. 1. Australia. **Cable:** "Gentel" – **Stations:** Lyndhurst: 5425kc 1kW: 12.00–22.30–7515kc: 12.00–22.30(10kW), 22.30–12.00(1kW) – 12005kc 10kW: 22.30–12.00 – The st. has bursts of 1000 c/s per second tone each second, exc. the 59th second of each min. Just before each h a recording is played: "This is an Australian Post Office time signal tr. from VNG in the 5.5, 7.5 or 12Mc bands" – **V.** by QSL-card.

MOUNT STROMLO OBSERVATORY
Addr: Mount Stromlo Observatory, Australian National University, Box 4, P.O. Canberra, A.C.T. Australia. **Te:** Mt. Stromlo 511 **Cable: Solarob.**
L.P: Chief Time Sce: H.J.M. Abraham, Sen Techn. Officer: J.M. Boots.
Stations: VHP 44kc 200kW: 00.25–00.30(exc. Tues & Fri), 07.55–08.00; VHP2 4286kc/VHP3 6428.5kc/VHP4 8478kc/VHP5 12907.5kc/VHP6 17256.8kc(all 10kW): 00.25–00.30, 07.55–08.00, 13.55–14.00, 19.55–20.00.

OBSERVATORIO NACIONAL DE ASTRONOMIA, Brazil
originates time signals, which are broadcast by stations PPE & PPR. **PPE: Addr:** Serviço da Hora, Observatorio Nacional de Astronomia. Rua Gen. Bruce 586, Rio de Janeiro, GB – **L.P:** Chief Eng: C. G. Lacombe – **Station:** 8721kc: 13.25–13.30, 20.25–20.30, 00.25–00.30. **PPR: Addr:** Radio Rio, Av. Francisco Bhering, Arpoador, Rio de Janeiro, GB – Stations: 435, 8634, 13105, 17194kc: 14.25–14.30, 21.25–21.30, 01.25–01.30.

DOMINIAN OBSERVATORY, Canada
Addr: 3, Observatory Crescent, Ottawa 4, Ontario, Canada. **Te:** 232-8211 – **L.P:** Adm: Dr. J. Hodgson. Dir. Tec: M. M. Thomson.
Stations: CHU 3330kc 90.09m 3kW – 7335kc 40.90m 3kW – 14670kc 20.45m 3kW – **T.S:** Continuous in voice and second pulses – **Ann:** English: "CHU Canada, Eastern Standard Time". French: CHU Canada, Heure normale de l'est" – **V.** by QSL-card. **Re.** welcomed – **Pub:** Station information free.

STATION CCV, CHILE
Addr: Instituto Hidrográfico de la Armada, Casilla 324, Valparaiso – **Stations:** 8205/ 12960kc: 11.15–12.00, 13.55–14.00, 15.55–16.00, 21.55–02.00, 00.55–01.00.

STANDARD FREQUENCY STATION OMA
Addr: Budecska 6, Praha 2, Vinohrady, Czechoslovakia. **Te:** 258757 – **L.P:** Dir: B. Sternberk – **Stations:** OMA 50kc 5kW: 24 h – OMA 2500 kc 1kW: 24 h – *OLB5* 3170kc 8kW: 24 h – *OLD2* 18985kc 8kW directed to F. East; Wed, Fri 12.30–13.00 – **Ann:** In morse-code – **V.** by QSL-card. Re. wanted.

CENTRE NATIONAL D'ETUDES DES TELECOMMUNICATIONS
Addr: 3, avenue de la République, Issy-les-Moulineaux-(Seine), France. **Te:** 532-40-00 – **L.P:** Chief Eng. Freq. Dept: P. la Maida, Chief Eng: B. Decaux.
Station: FFH 2500kc 5kW: 08.30–16.25 (Mon–Fri).
Ann: in morse in the 9th and 49th minute, in voice in the 10th, 30th and 50th minute, followed by morse.

BUREAU INTERNATIONAL DE L'HEURE
Addr: 61 Avenue de l'Observatoire, Paris 14, France – **L.P:** Dir. B. Guinot – **Stations:** St. André de Corcy FTA91 91.15kc 45kW 08.00, 09.00, 09.30, 13.00, 20.00, 21.00, 22.30 – Pontoise FTH42 7428kc 6kW: 09.00, 21.00 – FTK77 10775kc 6kW 08.00, 20.00 – FTN87 13873kc 6kW: 09.30, 13.00, 22.30 – **V.** by letter. (Reported with unmodulated timesignals from 5 min's before times mentioned until 6 min's past those times).

ZLFS, LOWER HUTT, New Zealand
Addr: Physics & Engineering Laboratory, Lower hutt, New Zealand. **Station:** 2500kc 0.3kW: CW only Tues 01.00–04.00 – **Ann:** St. identification is made in morse code at the beginning & end of each tr.

DCF77, MAINFLINGEN, Germany
Addr: Physikalisch-Technische Bundesanstalt, Braunschweig, Bundesallee 100, Fed. Rep. of Germany. **Cable:** "Bundesphysik". **Te:** 5921 – **L.P:** Pres: Prof. Dr.-Ing. M. Kersten; Dir. of Dept. I: Prof. Dr. U. Stille; Dir. of Sect. IA: Prof. Dr. U. Adelsberger; Dr. Ohl, Dr. Süss – **Station:** DCF77 77.5kc 12kW, nd transm. extends essentially from 06.45–10.35, 19.00–20.10 and around every full h until midnight. Call-sign DCF77 in morse-code, amplitude modulation 440 c/s.
Pub: Prgr. sched. on request.

GERMAN HYDROGRAPHIC INSTITUTE
Addr: Bernard Nochtstrasse 78, 2 Hamburg-4, W. Germany. **Te:** 311121. **Cable:** Hydrodienst
L.P: Head Time Sce: H. Enslin. Unmodulated timesignals at:
23.55-00.06 on DAN-2614kc (2kW), DAM-6475.5kc (5kW) (21/3-20/9), DAM-12763.5kc (15kW) (21/3-20/9), DAM-4265kc (5kW) (21/9-20/3), DAM-8638.5kc (10kW) (21/9-20/3).
11.55–12.06 on 2614, 8638.5, DAM-16980kc (15kW). 11.55–12.00 and 23.55–00.00 on DAO-2775 kc (2kW).
DAM = Elmshorn; DAO = Kiel; DAN = Norddeich.

GERMAN GEODETIC INSTITUTE
Addr: DDR15 Potsdam, Telegrafenberg 17 – **L.P:** Dipl. Ing: G. Hemmleb – **Station:** Nauen (DIZ) 4525kc 5kW: 09.45–08.15.

NATIONAL PHYSICAL LABORATORY (Gov.)
Addr: Teddington, Middlesex, Gt. Britain. **Te:** 3222. **Cable:** Physics
MSF Standard Frequency Service:

ROYAL GREENWICH OBSERVATORY
Addr: Time Dept. Herstmonceux Castle, Hailsham, Sussex, England. **Te:** 3171. **Cable:** Observer.
The international t.s's are radiated by GBR 16kc (reserve: GBZ 19.6kc) at 03.00, 09.00, 15.00 & 21.00 and on high freq's at 09.00 and 21.00. The freq's used are selected according to current ionospheric predictions. Freq's available: GIC24 4025kc, GAY25 5807kc, GIC26 6985kc, GIC27 7397.5kc, GIC29 9350kc, GPB30B 10331.5kc, GPB30 10332.5 kc, GKU5 12790kc, GIC33 13555kc, GIC37 17685kc, GIA39 19640kc. (Powers: GBR 350kW, GBZ 250kW, others 15kW).

ATA, NEW DELHI, INDIA
Addr: National Physical Laboratory, New Delhi.
Stations: 10000kc 2kW: Mon–Fri 05.30–07.30.

IAM, ROME,ITALY
Sddr: *Istituto Superiore, Ministero P. T, Rome.*
Atation: 5000kc 1kW – All days exc. Sun 07.30–08.30.

IBF, TURIN, ITALY
Addr: Istituto Elettrotecnico Nazionale, Corso Massimo d'Azeglio, 42, Torino. **Te:** 688773 – **Station:** 5000kc 5kW: W 06.45–07.00, 08.45–09.00, 09.45–10.00, 10.45–11.00, 11.45–12.00, 12.45–13.00, 13.45 –14.00, 14.45–15.00, 15.45–16.00, 16.45–17.00, 17.45–18.00 – **Ann:** "Emissioni di frequenze e tempo campioni dal l'Istituto Elettrotecnico Nazionale" – **V.** by letter.

STATION JJY
Addr: Radio Research Laboratories, Koganei, Tokyo, Japan. **Te:** (04.23)-81-1661 – **L.P:** Chief Standard Freq. Section. **Y.** Saburi – **Stations:** All 2kW nd, 24 h: 2500kc – 5000kc – 100000kc – 15000kc. All freq's are interrupted at 29–34 min. past each h. Mod. seconds pulses of 8 cycles of 1600c/s, and 1000 c/s tone – **Ann:** At 34-35 min's & 59-00 min's in each h. identifying signals are tr. consisting of call sign in morse code (twice), time in JST once in morse code, call sign twice in voice, time in JST once in voice and grade of propagation warning in morse code – **V.** by QSL-card.

TOKYO ASTRONOMICAL OBSERVATORY
Addr: Time Division, Mitaka near Tokyo.
Station: JAS22-16170kc 10kW directed to Europe 12.25-12.30 daily.

STATION OBC, PERU – **Addr:** Estación Central de Comunicaciones Navales Radio, Callao, Peru. **Stations:** OBC 490/8650/12307kc: *15.55–16.00, 18.55–19.00, 00.55–01.00.*

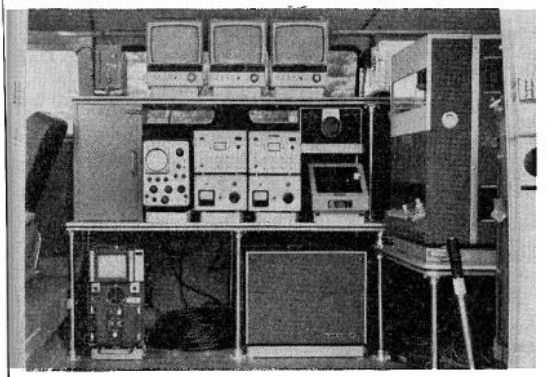
REP. OBSERVATORY SOUTH AFRICA
Addr: Republic Observatory, Johannesburg. **Te:** 43-2026. **Cable:** Astronomer – **L.P:** J. Hers – **Stations:** Call ZUO: Olifantsfontein 5000kc 4kW – Johannesburg 10000kc 0.25kW – Johannesburg 100Mc 0.050kW directional. 24 h per day, exc. for interruptions 15 to 25 min. past each h.
Time Signals: Continuous second pulses, consisting of 5 cycles of 1000c/s tone. The minute pulse in prolonged to about ½ second – **Ann** In morse code every 15 min's (just before each quarter hour): ZUO. ZUO, ZUO followed by the Universal time of the next minute – **V.** by letter will be answered if they are genuine reports.

HBN NEUCHATEL OBSERVATORY
Addr: Neuchatel, Switzerland. **Cable:** Observatoire. **Te:** (038)-5-1238
L.P: Dir: J. Bonanomi, W. Schuler – On 5000kc all day long:
Prgr. of tr: continuous tr. interrupted every 5 min. for 5 min. according to the following schema: 00m 00s – 04m 50s silence, 04m 50s – 05m 00s HBN (A_2), 05m 00s – 10m 00s carrier tr. with seconds pulses, 10m 00s – 14m 50s silence, etc – Within the h, the tr. is the following: Minutes 0–5 silence, 5–10 carrier and seconds pulses, 10–15 silence, 15–20 carrier and seconds pulses, 20–25 silence, 25–30 carrier and seconds pulses, 30–35 silence, 35–40 carrier and seconds, 40–45 silence, 45–50 carrier and seconds, 50–60 silence.

US NAVAL OBSERVATORY, Navy Department, Washington, *DC. 20390, USA.* **L.P:** Dir. Time Sce. Div: Wm. Markowitz.
VLF Time Signals are aired from 55 to 60th min's as follows: **NSS** (Annapolis): each h on 21.4kc; **NBA** (Canal Zone): each h exc. 23.55–24.00 on 24.0kc – **HF Time Signals,** begin 5 min's before the hand terminate on the h..
NSS: 23.55, 01.55, 05.55, 07.55, 11.55, 13.55, 17.55 on 162kc*, 5870, 9425, 13575, 17050.4, 23650kc (* exc. Thurs 13.55 & 17.55 when on 121.95kc) – **NPG** (San Francisco): 23.55, 05.55, 11.55, 17.55 on 114.95kc, 4010, 6428.5 9277.5, 12966, 17055.2, 22635kc – **NPM** (Honolulu): 05.55, 11.55, 17.55 on 131.05kc, 4525, 9050, 13655, 17122.4, 22593kc – **NPM** (Guam) 23.55, 05.55, 11.55, 17.55 on 484, 4955, 8150, 13530, 17530, 21760kc – **NBA:** 04.55, 09.55, 16.55, 22.55, on 147.85kc, 5448.5, 11080, 17697.5, 22515kc.

SONY's Integrated Engineering Produces A Mobile Video Recording Station The SONY VTR CAR

Developed against a background of pioneering leadership in the design and manufacture of high-quality solid-state video station equipment, we now present the SONY VTR CAR, a mobile video recording station. This compact, highly versatile and reliable system is suitable not only for parked on-the-spot recording but for on-the-move recording, too—while actually following races, marches or motorcades.



Interior view of the Mobile Video Recording Station Showing Monitor receivers, video recorder and other auxiliary equipment.

Mounted in a Volkswagen Micro Bus, the heart of the system is SONY's solid-state BV-120 Videocorder, which has been proven and applauded for its time-base-stability, picture-resolution and over all reliability. Two SONY Model IIC-500 Television Cameras are also furnished, with camera heads, control units, power supplies and fitted with the F4/50mm—200mm zoom lens. Three SONY 9-inch Picture Monitors are installed at the control position inside the van.

Prime power is supplied by an Onan's gasoline engine generator mounted in the rear compartment of the van, and it's stabilized by an automatic voltage regulator. Write for our detailed brochure which completely describes this latest product of SONY's Integrated Engineering.

Addr: 4440 Saratoga, Downers Grove, Ill, USA. Pres: Clarence W. Jones. Exec. Secr: Richard Wolff.

Lutheran Television Productions, a Board of the Lutheran Church-Missouri Synod, producing and distributing "This is the Life" and "The Fisher Family", Exec. Secr: Dr. E. R. Berterman. Prgr. Dir: Dr. H. W. Gockel, 210 No. Broadway, Saint Louis 2, Missouri.

Difusiones Inter Americanas: (DIA), an evangelical organization, established to produce, process, distribute and promote radio and tv. prgr's, recordings and audio visual aids for the evangelizing of Latin America – Addr: Apt. 2470, San José, Costa Rica.

Latin America Mission, 285 Orchard Terrace, Bogota, N.J. and Apt. 1307, San José, Costa Rica. Publ: "Radio Headlines".

Central American Mission, (operates TGNA, Guatemala), 3611 Congres Ave, Dallas, Texas.

Centro Audio-Visual Evangelico, (CAVE), produces and distributes religious, educational and cultural audio-visual material, non-projected aids, filmstrips, slides, projectors, LP records, radio programs as well as dubbing of TV films in Portuguese. Studios and filming laboratories are made available to other organizations upon request. Gen. Secr: Dr. William E. Haney, C.P. 943, Campinas, São Paulo, Brazil.

The Evangelical Alliance Mission, P.O. Box 969 Wheaton, Ill. 60187, USA. Gen. Dir: V. Mortenson, Operates HLKX, Inchon, Rep. of Korea, PJA-6, Aruba, Neth. Antilles, OAZ, Lima, Peru.

The Gospel Missionary Union. Headquarters, Smithville, Mo. USA. Pres: Don P. Shidler. Publ: Gospel Message.

West Indies Mission, R. D. 1, Box 279 Homer City, Penn. USA – Dir. Gen: Rev. E. V. Thompson. Dir. of Radio Haiti Field: Rev. David Hartt. Publ: "The Whitened Harvest". Is working in the West Indies and in South America.

Broadcasting and Film Commission NCCUSA, New York, USA. National Council of Churches of Christ in the USA, 475 Riverside Drive, New York 10027. Exec. Dir: W.F.Fore.

RAVEMCCO, New York, USA, Radio, Visual Education and Mass Communication Committee of the Division of Overseas Ministries of the National Council of the Churches of Christ in the USA, 475 Riverside Drive, New York 10027, N.Y, Dir: Dr. B. M. Luben.

Far East Broadcasting Co. Inc, P.O. Box 1, Whittier, California. Pres: Robert H. Bowman. Private Comp. with offices in twelve countries. Publ: "FEBC Broadcaster" monthly. Operates st's in Manila (Philippines), Naha (Okinawa) & San Francisco (USA).

The Lutheran Hour "Bringing Christ to Nations", Saint Louis, USA. Sponsored by The Lutheran Laymen's League, 2185 Hampton Avenue, St. Louis, Missouri 63139. Exec. Dir: P. Friedrich.

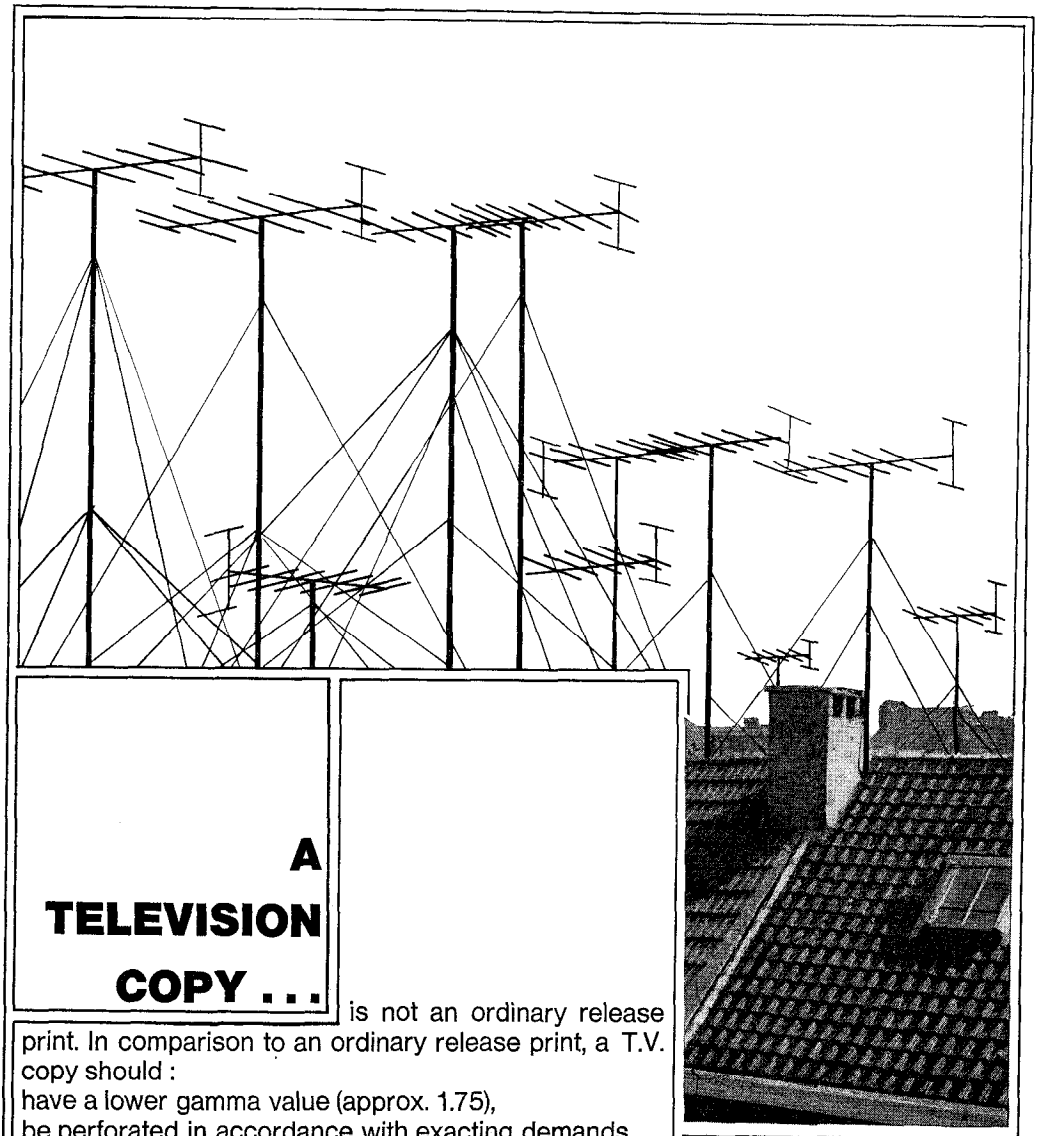
The Oriental Missionary Society and the **Inter American Missionary Society,** P.O. Box A, Greenwood, Indiana 46142, USA. Pres: Dr. Eugene A. Erny. Dir. Haiti Field incl. allied missionary activities: E. Turnidge, Box I, Cap Haitien, Haiti. Operates St: 4VEH, Cap Haitien, Haiti.

World Radio Missionary Fellowship: HCJB-TV, Quito, Ecuador; HOXO, Panama, R.P. USA. Pres: Abe Van der Puy, P.O. Box 691, Miami, Florida. Operates La Voz de los Andes HCJB Ecuador; No. American Headquarters P.O. Box 691, Miami, Florida 33147.

Canadian Baptist Foreign Mission Board, 190 St. George Str., Toronto 5, Ontario, Canada. Gen. Secr: Dr. O. E. Daniel. Operates R. La Cruz del Sur, La Paz, Bolivia.

ASIA AND PACIFIC:

The Near East Council of Churches: Rev. Albert Isteero, General Secretary; William N. Haddad Gen. Dir. of the Commission on Radio Broadcasting, P.O. Box 5376, Beirut, Lebanon.



A TELEVISION COPY . . . is not an ordinary release print. In comparison to an ordinary release print, a T.V. copy should :
have a lower gamma value (approx. 1.75),
be perforated in accordance with exacting demands,
have a finer grain for the sharpest details.
Furthermore, it should also be possible to process a T.V. copy together with ordinary positive films.
Gevaprint film for T.V. - type 5.64 meets all these requirements.

Apply for detailed information to : Gevaert-Agfa N.V., Mortsel (Belgium)

Special Abbreviations for Shortwave Listeners:
Q-Codes: The following "Q" Codes, devised at the Cairo Convention of 1938, are used among shortwave enthusiasts listening to broadcasting stations (socalled DXers): QRG = Frequency; QRK = Readability; QRM = Interference (from other transmitters); QRN = Atmospheric interference (static); QRT = Close down; QSA = Signal *strength*; QSB = *Fading*; QSL = *Verification (of reception)*; QTH = Location.
The following abbreviations are generally used in club publications: *BC = broadcast; BCB = Broadcast band, i.e. medium wave band;* CW = Continuous Wave, i.e. morse code; HF = High Frequency; ID = Station Identification; IRC = International Reply Coupon; LA = Latin America; mx = music; nx = news; OM = Old Man, a general term of greeting; rx = Receiver; SSB = Single Side Band; SWL = Shortwave Listeners; Tnx = Thanks; tr = Transmitter; 73's = Best Wishes.

NEWARK NEWS RADIO CLUB

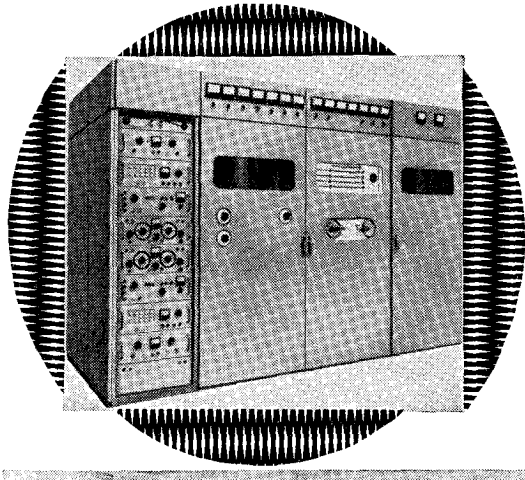
★ Founded in 1927 as the *first* DX listeners' club, NNRC is years ahead of any other in experience.
★ Monthly Bulletin has sections devoted to Standard Broadcast, Shortwave Broadcast, Amateur, Commercial, FM and TV bands, as well as to Card Swapping, NNRC's semi-annual Amateur Band Competitions & Statistics. Well over 600 pages a year to keep you up-to-date!
★ Certificates of Merit are available, to members who qualify, for verifying stations on all bands.
★ To get the most out of your hobby, you should join a club. Go first class; make your club the NNRC.
★ Annual dues, $ 5.00 U.S.; sample Bulletin 25 c.

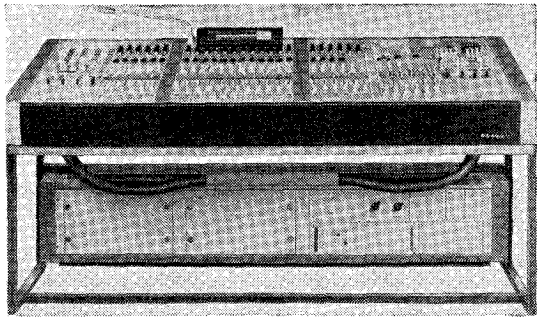
Newark News Radio Club, 215 Market Street, Newark 1, New Jersey, U.S.A.

THE DANISH SHORT WAVE CLUB INTERNATIONAL, P. O. Box 102, Vejlby-Risskov, Denmark, publishes "SHORTWAVE NEWS" (intern) and "KORTBØLGENYT" for Scandinavia (excl. July). Membership fee per year: D.Kr. 18.00, $ 3.00, £ 0/19/0, 25 IRC; airmail extra $ 2.25. Payment to C. E. Engelbrechtsen. P. O. Box 102, Vejlby-Risskov, Denmark.

BROADCAST AND TV EQUIPMENT

TESLA





High-efficiency short-wave broadcasting transmitters of 120 kW output

Medium- and long-wave broadcasting transmitters of 200 kW power output, with possibility of paralleled operation of two or more units

Short-wave communication transmitters of 50 kW power rating, with SSB for transmission of four independent speech channels

Short-wave and long-wave telegraph transmitters of 50 kW and 70 kW power output

Television transmitters for bands I and III as well as IV/V, with power klystrons

Fully transistorized studio equipment

New types of modern design and high efficiency. Projects and installations of complete transmitting centres

Detailed information will be gladly furnished on request

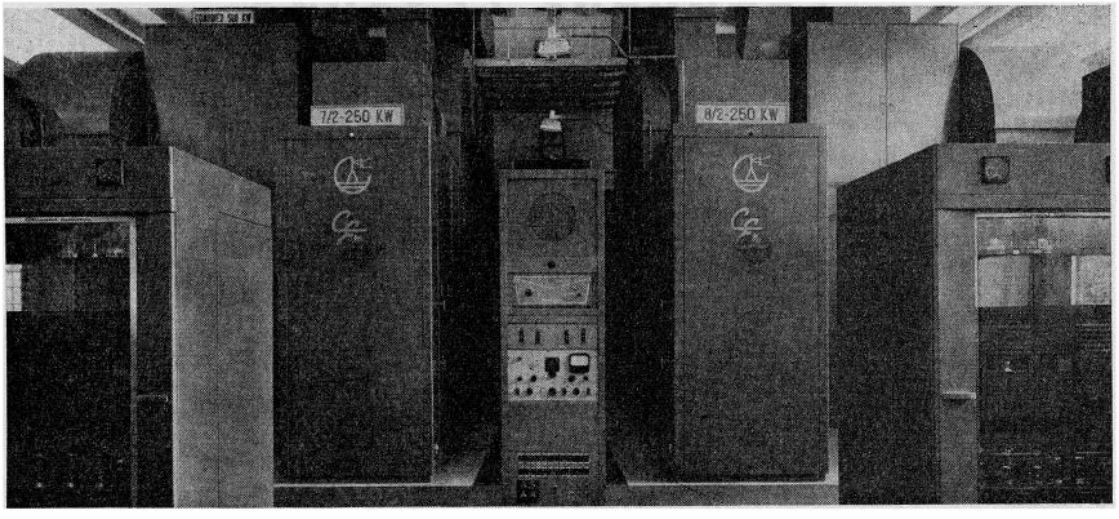
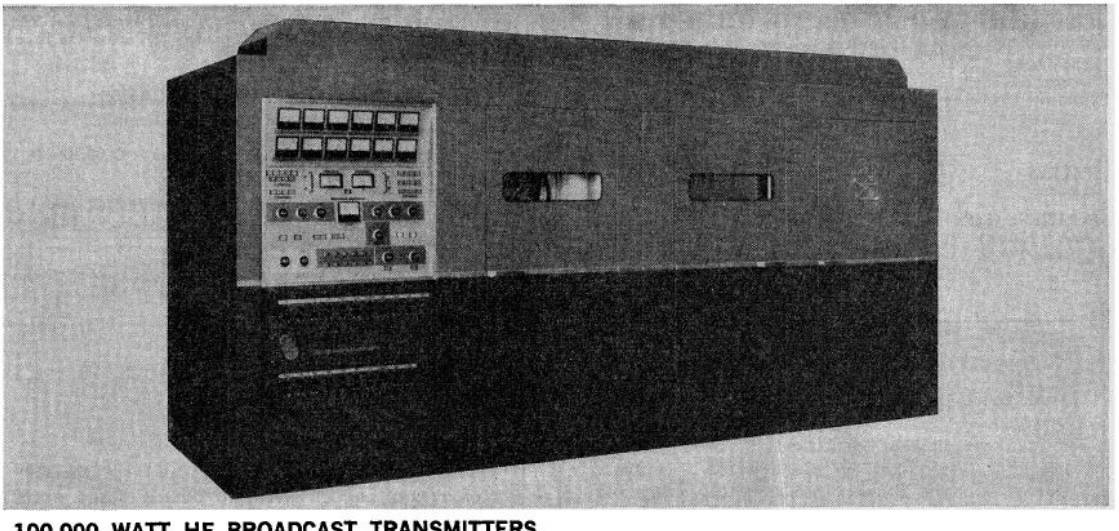
CONTINENTAL ELECTRONICS SUPER POWER TRANSMITTERS AROUND THE WORLD



250,000 WATT AND 500,000 WATT HF BROADCAST TRANSMITTERS
Partial view of the Radio Liberty Committee Installation near Barcelona, Spain. This station uses four Continental 250,000 watt HF transmitters; two are combined for 500,000 watt operation. The USIA uses six Continental 500,000 watt HF transmitters at their Greenville, North Carolina Station. Continental is also building ten 250,000 watt HF transmitters for USIA installations in Greece.



100,000 WATT HF BROADCAST TRANSMITTERS
Four Continental Type 418B 100,000 watt HF transmitters are installed at the Emissora Nacional de Radiodifusão broadcasting station in Lisbon, Portugal. Two Continental 100,000 watt HF transmitters are installed in Pakistan.

Continental transmitters range from 5,000 watts to 1,000,000 watts. For descriptive brochures, write: Continental Electronics Mfg. Co.; Box 17040; Dallas, Texas 75217.

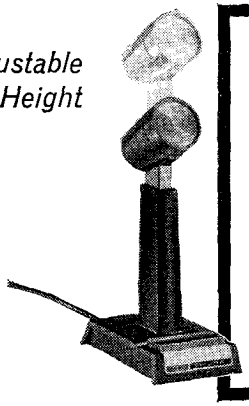
At last! A quality microphone designed **specifically** for the ham. Incorporates features galore that hams have asked for. Tops in voice punch and intelligibility . . . and abounding in convenience features to minimize operator fatigue. Great for AM & FM transmission, unsurpassed for SSB. Check these outstanding ham-oriented features:

- "Shaped" response—cuts off sharply above 3000 and below 300 cps with a rising characteristic to the curve: gets the message through with top audio punch!
- Push-to-talk bar-switch with optional locking feature to control relay and mike muting circuits.
- Separate slide-switch gives choice of press-to-talk or VOX operation.
- Exclusive adjustable height stand for fatigue-free operation.
- Rugged Shure Controlled Magnetic element (U.S. Patent 2,454,425).
- Field replaceable cartridge and cable.
- ARMO-DUR case and stand—can't rust, peel, crack, or dent. Always comfortable to the touch.
- Shock proof.

Adjustable Height



ALL NEW **SHURE**

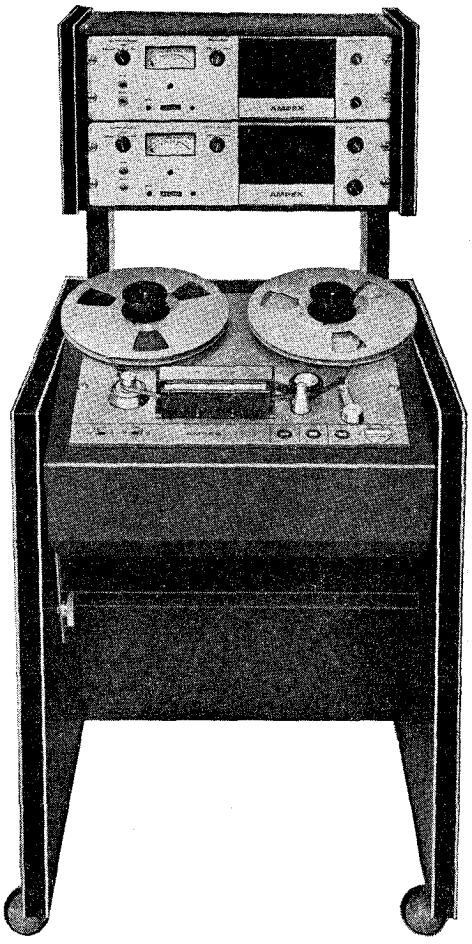
Since 1954 the Ampex 350 series has been the best recorder in its field



Now we've improved on it. Meet the Universal AG-350 with solid state electronics

For 12 years the 350 series set the world standard. 18,000 were bought, many have logged over 90,000 hours apiece. Now we've improved on it further.

The new Universal AG-350 has added solid state electronics, new features, new operating convenience to the 350's proven performance and reliability.

Solid State Electronics—The same know-how that researched transistors for sophisticated computers has been utilised for the electronics in the Universal AG-350. 100% solid state circuits give optimum capability and reliabilty.

Precision Tape Transport—In most recorders, performance deteriorates with age and wear on the mechanism. The Universal AG-350 is precision built for really heavy duty. It has a longer top-performance life, and any slight fall-off of quality is easily adjusted to bring it back to original specifications.

Head Assembly—The Universal AG-350 uses Ampex Professional Audio head assemblies. Other good heads live for maybe 10,000 hours. Ampex head assemblies are as good as new for 15,000 hours and more. Some Ampex Professional Audio heads are performing to original specifications after 36,000 hours. This is the performance you can expect.

There are 25 variations on the basic Universal AG-350, a choice of $3\frac{3}{4}$-$7\frac{1}{2}$ or $7\frac{1}{2}$-15 ips. All recorders in the AG-350 series operate on virtually any standard line voltages without the need for external step-down transformers.

AMPEX

Ampex sales and service facilities are conveniently located throughout Europe and the Middle East. For more information write to: Ampex Great Britain Ltd., Acre Road, Reading, Berkshire, England. ★ *Sveriges DX-förbund* är en sammanslutning av flertalet svenska DX-klubbar. Varje månad utges *Eter-Aktuellt*, en riktig, tryckt DX-tidning med bl. a. *nybörjarsidor, Special-DX-sidor från* Latin-America, Asien och Africa, tipssidor både för nybörjare och avancerade, QSL-nytt, stationspresentationer, samt naturligtvis senaste nytt från alla områden inom DX-hobbyn.
Sänd ett 45-öres frimärke för ett provnummer och alla upplysningar till: Sveriges DX-förbund, Box 19008, Malmö 19.
★ DX-ers outside Scandinavia are invited to join the INTERNATIONAL DX-CLUB OF SWEDEN — a link between dx-ers all over the world and the Top-quality Swedish DX-magazine *Eter-Aktuellt*. Sample copy, and all informations about IDXCS, against 1 IRC. Write to: IDXCS, Landskrona, Sweden.

WORLD PUBLICATIONS present

We offer you a new international broadcasting tape:

LATIN AMERICA ... IN 45 MINUTES.

Many of the Latin American stations are rather difficulty to receive owing to the small powers used, fading, interference etc. One has to wait until midnight local time to start receiving those weak signals. But this is what makes this listening so fascinating. Some of the stations, particularly those in Brazil, are quite easy to pick up and broadcast very attractive music.

The Identification problem for thousands of listeners interested in listening to Latin America has now been solved by the production of a

LATIN AMERICAN IDENTIFICATION TAPE,

which contains programmes, announcements, identification signals and typical local music from about 40 Latin American stations. When you listen to this unique tape, you will notice a big difference in style and rhythm of the local music from country to country.

This Latin American tape is produced in close co-operation with the stations and organizations, which *have shown great interest by recording the tapes in* their own studios.

We have endeavoured ourselves to make the contributions as instructive and entertaining as possible. This unique tape will give you a lively impression of Latin American broadcasting and music - and at the same time help you to identify the stations.

The recordings are original and therefore free from noise and interference.

To each tape belongs a complete list of the contents. We call this tape BIT2.

You know perhaps BIT1 which contains 27 European, 12 African, 16 Eastern and Pacific stations as well as 10 leading No. American stations.

These tapes help to open the World for you and your family and bring you an understanding of how big, how versatile the population of this world is.

Both BIT1 and 2 are available and are recorded on high quality mylar tape, 2 track mono, speed 3¾" (9.5 cm) per second and will therefore fit practically any tape recorder.

The price incl. transport for each of them is: Da.Kr. 39.50, US $ 6.00, £ 2/0/0, DM 24.00, Sw.Kr. 30.00. — Airmail transport extra Da.Kr. 13.00, US $ 2.00, £ 0/14/0.

By order of both BIT1 and BIT2 we offer you 10 % in discount. We send you our brochures by request.

Obtainable from your bookseller or direct from

Every month first-hand information on the world of broadcasting is offered to you in the

EBU REVIEW

Published in English and French by the European Broadcasting Union

Part A — Technical will keep you informed of all new technical developments in sound and television broadcasting.
— Articles written by specialists describe typical new installations, new operational methods and research work undertaken by the broadcasting organizations.
— The "International News" section is devoted to news items reported by EBU Members concerning the installation and operation of transmitting stations and studio centres, recording equipment and outside broadcast facilities, both for sound and for television.
— Each number gives a summary of the changes that have taken place during the previous two months in the spectra of the long, medium and metric (FM) sound broadcasting wavebands and of the television wavebands.

Part B — General and Legal — brings you authoritative reports on radio and television developments throughout the world in the non-technical fields. Specialists write on the latest trends in

programming, administration, and planning,

progress and activities are reported from the international sphere, and from broadcasting organizations in over 50 countries

experts analyse legislation and jurisprudence touching on broadcasting, new Copyright Acts, etc.,

special numbers give in-depth coverage of key subjects, including educational broadcasting, graphics and design, news programming, religious programming, Eurovision developments, and agricultural broadcasting.

ANNUAL SUBSCRIPTION

Part A (six numbers): 230 Belgian francs. Publishers: EBU Technical Centre, 32 Avenue Albert Lancaster, Brussels, Belgium.

Part B (six numbers): 20 Swiss francs. Publishers: EBU Administrative Office, 1 rue de Varembé, 1200 Geneva, Switzerland.

A combined subscription to Parts A and B (12 numbers) may be ordered either from Brussels or Geneva (price 420 Belgian francs or 36 Swiss francs).

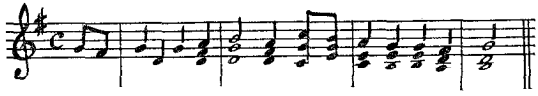
On Sundays all prgr's are in Danish. * Sat only (test).
Each broadcast consists of ¾ h Danish followed by ½ h English or Spanish, and a news bulletin is the first item on the prgr.
Emphasis is laid on cultural and social material, on aspects of the many facets of life in Denmark, Danish relations with the rest of the world, and also included in the prgr's are classical and light music, DX-Bulletins, topical events and mailbag get-togethers.
INT-SIG & ANN: Danish tr's preceded by repetition of first bars of Danish National song by Carl Nielsen:



followed by words: "Danmarks Radio". The English tr's begin with: "This is Denmark".
Message to Listeners: Radio Denmark is anxious to receive reports on prgr. and on reception conditions from all parts of the world. It makes every endeavour to get into touch with countrymen and listeners in countries abroad with a view to provide the best possible sw-sce – V. by letter or QSL-card. Recordings accepted – **PUB:** "Voice of Denmark" (quarterly) mailed upon request – **ALF:** Kr. 50,–.

LOWEST
AIR FARES BETWEEN EUROPE AND U.S.A.

Now is the time to take advantage of Icelandic's incredibly low Thrift Season fares. Lowest of any scheduled airline at anytime of the year . . . one way or all-year round trips. Pay far less than Jet Economy fares. New faster service, too! Swift, new Rolls-Royce 400 Jet Props are in full service from Luxembourg to Iceland and New York. Service from other Icelandic terminals is via long-range DC-6Bs to Iceland—connecting with Rolls-Royce 400 Jet Props to New York. Complimentary meals, drinks, snacks. There is no doubt about it . . . Icelandic is your best sky-buy to the U.S.A.

Broadcasting House in Moscow

THIS IS RADIO MOSCOW!

RADIO MOSCOW can be heard abroad in 55 foreign languages and 10 languages of the USSR on both short and medium waves. All continents are covered.

For the Soviet point of view on foreign affairs and firsthand information on life in the Soviet Union, tune in to RADIO MOSCOW.

RADIO MOSCOW's external services carry the news, reviews of the Soviet press, talks and interviews, youth programmes, features on science and engineering, sports, arts and literature. Music from Moscow is popular.

In 1967 RADIO MOSCOW will broadcast regular programmes devoted to the 50th anniversary of the 1917 Socialist revolution and Soviet government.

Listeners' letters are answered both on the air and by mail. Request music programmes are featured regularly and quizes with prizes for listeners are popular.

TUNE IN TO RADIO MOSCOW!

ADDRESS: RADIO MOSCOW, MOSCOW, USSR

WORLD PUBLICATIONS present

TWO NEW PUBLICATIONS:
WORLD MEDIUM WAVE GUIDE 1967

The only book which give you Worldwide listening in one volume.

The Fourth Edition of the WORLD MEDIUM WAVE GUIDE is now ready. In this you will find the most up-to-date listing of all m.w. stations throughout the world. The front section is listing by kilocycles of all the world broadcasting stations. The No. American section is broken down to three parts, by kilocycle, by alphabeth listing of locations, and alphabeth listing by call letter. This will give you a quick and easy reference to the stations.
Price. Da.kr. 16.50, US $ 2.50, £ 0/16/9, DM 9.75, Sw.Kr. 12.75. Postage extra: Da.Kr. 1.60, US $ 0.25, £ 0/1/6, DM 1.00, Sw.Kr. 0.90, Airmail extra: US $ 1.75 or £ 0/12/0.

NEWS FROM AROUND THE WORLD 1967

The 1967 edition of "News from Around the World" is now available. We suppose you prefer to listen to the news **direct** from the places where the events are happening. telecommunication journal

In the increasingly international age in which we live, it is more important than ever that everyone connected with radio should be in touch with authoritative world opinion on radio matters.

The Telecommunication Journal, the official organ of the International Telecommunication Union (ITU), serves just this purpose. Since 1869 (when it first appeared as the "Journal Télégraphique") it has faithfully covered all aspects of telecommunications which come within the purview of the world organization (now a UN specialized agency) set up in 1865 to regulate them.

The journal contains

- a news section covering the activities of the ITU, of its Member Administrations and of private operating companies and highlighting technical advances in radio throughout the world –
- articles by world experts, with a heavy emphasis recently on the latest developments in space communications-
- a comprehensive list of articles of telecommunication interest appearing in the scientific press throughout the world –
- official ITU information, including lists of forthcoming ITU Conferences and other international telecommunication meetings –
- monthly sunspot predictions.

It is published monthly by the ITU in separate English, French and Spanish editions.

It costs 2 Swiss francs a copy. The annual subscription is 20 francs for one language edition, 30 francs for two and 40 francs for three.

For further information, write to: Telecommunication Journal, ITU, Place des Nations, Geneva, Switzerland.

FOUNDED 1939: DEDICATED TO SERVING BROADCASTING

MEMBERSHIP: Membership is personal; currently consisting of 1500 policy and decision makers in all phases of broadcasting, advertising and allied fields.

A FORUM: Semi-monthly Newsmaker Luncheon meetings present an excellent platform for World and Industry Leaders who give their views on current developments in communications and other timely topics.

SPONSORS: Radio Commercials Workshop – Television Commercials Workshop – Basic and Advanced Time Buying & Selling Seminars – College Conference – Broadcasting and The Law Seminar – Others developing.

INTERNATIONAL RADIO & TELEVISION SOCIETY, INC.
444 Madison Avenue New York, New York 10022

Unmatched versatility for communications, surveillance, systems design, or laboratory instrumentation . . .

NATIONAL'S NEW HRO-500 HF/VLF RECEIVER IS TOTALLY SOLID STATE... OUTPERFORMS CONVENTIONAL TUBE UNITS... AND IS FAR LOWER IN COST!

National's new HRO-500 receiver is totally solid state for versatility, portability, and reliability. It incorporates a phase-locked frequency synthesizer to cover the extraordinary range of 5 kilocycles to 30 megacycles in sixty bands, with identical stability, tuning rate, and high calibration accuracy throughout. Complete SSB/CW/AM facilities are provided, as well as all necessary outputs for operation of ancillary equipment. ■ Total solid state design provides remarkable versatility and reliability, as well as simplified power and cooling requirements. The HRO-500 operates directly from either 115/230 V.A.C. or 12 V.D.C. sources (12 volt current drain is only 200 ma at low audio output with pilot lamps switched off). Transistors provide instant-on operation without delay or warm-up drift. ■ Entire VLF and HF spectrums . . . from 5 Kc to 30 Mc . . . are tuned continuously with 1 Kc dial calibration and 10 Kc per turn tuning rate. The HRO-500 provides better than 1.0 μv for 10 db S/N SSB/CW sensitivity with 60 db minimum image rejection (optional LF-10 preselector is recommended for optimum VLF performance). Effective dial scale length is 24 feet per megacycle, with $\frac{1}{4}''$ spacing between one-Kc calibrations. ■ Frequency is determined by a phase-locked crystal frequency synthesizer, which eliminates multiple crystal oscillators for high frequency oscillator injection. All HFO signals are synthesized from the output of a 500 Kc master crystal oscillator for maximum stability and elimination of band-to-band recalibration. Long-term stability from turn-on is equal to that of the best tube-type commercial receivers *after* warm-up. ■ Dynamic range and cross-modulation characteristics are equivalent to, or better than, many competitive tube-type receivers of similar sensitivity. ■ The HRO-500 provides superb SSB/CW/FSK performance with separate product detector, fast-attack, slow-decay AGC, and selectable sideband. The tunable filter provides four discrete I.F. bandwidths of 500 cps, 2.5, 5.0, and 8 Kc, with nominal 6-60 db shape factor of 2.5:1. *Passband Tuning* is provided in the 500 cps and 2.5 Kc bandwidths, for selectable sideband or single-signal reception without change in frequency or beat-note. ■ The HRO-500 is compact in size and light in weight: $7\frac{5}{8}''$ H, $16\frac{1}{2}''$ W, $12\frac{3}{4}''$ D; weight only 32 lb. A rack mounting kit is available for standard $8\frac{3}{4}''$ RETMA panel. ■ Write to National for detailed information, performance data, and complete specifications.

WORLD PUBLICATIONS present

New Edition of the New Guide:

HOW TO LISTEN TO THE WORLD

This well-known handbook will help you with your hobby and enable you to understand and to solve all your problems. In the following we mention as exeamples a few of the subjects covered and there are numerous illustrations:

THE ART OF LISTENING TO THE WORLD

By H.-J. Felbick, DL610, Germany.
A complete non-technical description of all problems connected with world-listening.

THE RADIO FREQUENCY SPECTRUM

By L. J. Prechner, Bsc., BBC, Engineering Division.
A survey and explanations about the use of all the radio frequencies in the radio frequency spectrum.

IONOSPHERIC DISTURBANCES

By L. J. Prechner, B 50, BBC, Engineering Division.
How the ionosphere is subject to disturbances is explained in this article.

THE STRUGGLE FOR FREQUENCIES

By S. B. Duke, President Radio Canada Shortwave Club. Supervisor Radio Canadas Engineering Division. There are not enough shortwave frequencies to satisfy all demands. This article is an illustration to the discussion: Frequency Management.

MOST SUITABLE METREBANDS IN 1967

Described and explained in text and tables for each part of the world by Mr. Roger Legge, Frequency Division, Voice of America.

INTERFERENCE AND YOU

By S. B. Duke, Supervisor Radio Canadas Engineering Division. Description of the different types of interference.

INTERFERENCE PROTECTION

By Hans-Joachim Felbick, Deutsche Welle.
A description on how to reduce interference and how to built antenna filter.

PRINCIPLES OF ALL RECEIVER TYPES

Selection of a receiver for a particular purpose. Understand the limitations and the capabilities of a receiver. By Paul Harris, G3GFN, England.

METHODS FOR RECEIVER CALIBRATION

By Jim Vastenhaud, Holland.
Tuning the shortwave bands is difficult today on account of the many stations. The need for checking frequencies is therefore obvious. In this article different methods for calibration of a receiver are explained.

HOW TO IDENTIFY STATIONS AND WHAT TO LISTEN FOR

A survey about Identification, program details and how to report.

Please write for brochures.
Price: Da.Kr. 22.50, US $ 3.25, £ 1/6/0, DM 14.50, Sw.Kr. 16.50. Postage extra: Da.Kr. 1.75, US $ 0.25, £ 0/1/6, DM 1.00, Sw.Kr. 0.90.

NEW!
NEW!
NEW!

Brand new and exciting radio programs are now being produced in London employing the best casts, writers and directors from England, Canada, Australia, and the U.S.A. Already in production are: –

DR. WHO –

Time and Space and the realms of the unknown are yet to be fully explored by mankind but their secrets are already known to one person, DR. WHO – Traveller Extraordinary. From the B.B.C.'s most successful television program comes the amazing DR. WHO available for the first time on radio as a 25-minute serial of which there are 52 episodes.

SEXTON BLAKE –

The most famous detective in the world. 52 episodes featuring SEXTON BLAKE and his assistant TINKER in hair raising new adventures. (Running time 25 minutes).

BRUCE COURAGE –

A fifteen minute daily spy thriller starring TOM ADAMS (latest film "The Second Best Secret Agent in the World"). BILL KERR (from "The Flying Doctor"). And attractive newcomer VALERIE KIRKBRIGHT.

One minute and five minute programs are also available including daily readings by HUGH BURDEN of the NEW ENGLISH BIBLE.

Scripts for all the above programs are available for translation into any language.

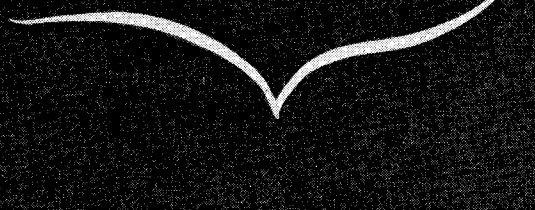
ARMED FORCES RADIO and TELEVISION SERVICE

ADDR: Hqs: Directorate of Armed Forces Information and Education, Washington D.C. 20305.

This office exercises over-all policy control of the Armed Forces Radio and Television Service. The mission of AFRTS is to keep U.S. Service men and women stationed outside the States the best informed service personnel in the world on current events. **All broadcasts are in English.** News, sports and other timely matter is beamed overseas directly by ten powerful tr. on the U.S. Atlantic and Pacific coasts. These s.w. broadcasts serve the overseas radio stations, which rel. them locally. Prgrs. other than news and locally produced prgrs. are derived directly from the U.S. Commercial radio and tv. networks. N. is compiled from the wires of A.P. and U.P.I. and include voice actuality and "from the scene" report segments.



THE VOICE OF AMERICA

1942 AT TWENTY-FIVE 1967

In 1942, VOA began broadcasting in five languages from 13 transmitters. Today, VOA broadcasts in 38 languages around the clock from 100 transmitters to tens of millions of listeners.

Today, as in 1942, VOA is dedicated to communicating truth.

EDUCATIONAL ORGANIZATIONS

Department of Health, Education, and Welfare, Office of Education, Washington D.C.20202; Office of the Under Secretary: I. A. Nestingen.
The Educational Television Facilities Programme designed to encourage establishment of new and improved broadcast facilities through financial grants based on matching funds.
Office of Education, Media Research and Dissemination Branch, Ag. Dir: Th. D. Clemens. Educ. Media Specialist: Mrs. G. Broderick. provides a variety of services by professional staff specialists to schools and college officials, st. operators, and others, as requested. Under Title VII of the National Defense Education Act, finances research and experimentation in the educ. uses of all media; disseminates information on the subject through conferences, seminars, workshops, and publication of pertinent bulletins.

National Association of Educational Broadcasters (NAEB).
Headquarters: 1346 Connecticut Ave, N.W. Washington D.C. 20036. **Te:** 667-6000 – **Publications and Network Office:** 119 Gregory Hall, Urbana, Illinois 61803. Te: 333-0580.
L.P: Pres: W. G. Harley. Vice-Pres: H. E. Hill. Secr: James A. Fellows.
Stations: 224 educational institutions and organizations owning and operating a total of 230 educational radio and TV stations.
Fi: By membership fees. Also some support from outside sources for special research projects. The national independent professional association, which since 1925 has represented the interests and needs of educ. television and radio broadcasters, represents appr. 75% of the educ. st's and production centers of the United States (appr. 90% exc. those indentified as religious st.).
Activities and Functions: The NAEB is the Association of American institutions operating educational, cultural and public Sce's radio and TV st's and production centers. Publish a monthly Newsletter, a bi-monthly Journal and an annual yearbook/Directory. The NAEB also operates a radio network which duplicates via tape and distributes to members st's five hours of programming per week. At present there are some 135 st's in this network. Exchanges of prgr's with other nations are welcomed. It also actively cooperates with various intern. organizations (European Broadcasting Union, UNESCO etc.), and the national systems of various other countries. According to FCC regulations, non-comm. educational FM st's have no restrictions on transmission time.

GOVERNMENT AGENCY:

THE FEDERAL COMMUNICATIONS COMMISSION (FCC) – the licensing agency for broadc. st's – **ADDR:** P.O. Dept. Bldg, Washington 20554, D.C. – **L.P (key officials):** Chmn: Rosel Hyde. Exec. Dir: M.D. Paglin. Secr: B.F. Waple. Chief, Broadcast Bureau: G.S. Smith.
The FCC is an independent Federal agency, composed of seven Commissioners appointed by the Pres. by and with the advice and consent of the Senate. One of its major activities is the general regulation of broadc. – now visual as well as aural. This regulation may be divided into three phases: 1) The allocation of spectrum space to the different types of broadcast services, 2) Considerations to build and operate individual stations, 3) Regulating their operation.
Call letters. – International agreement provides for the national identification of the radio st. by the first letter or first two letters of its assigned call signal, and for this purpose apportions the alphabet among different nations. USA st's use the initial letters K, N, and W, exclusively, and part of the A series. Broadcast st's are assigned call letters beginning with K or W. Generally speaking, those beginning with K are assigned to st's west of the Mississippi River and in the territories and possessions, while W is assigned to broadcast st's east of the Mississippi.
Number of broadc.st's in the USA as of July 1st, 1966.

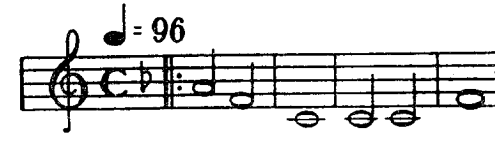
UNITED NATIONS

UNITED NATIONS RADIO

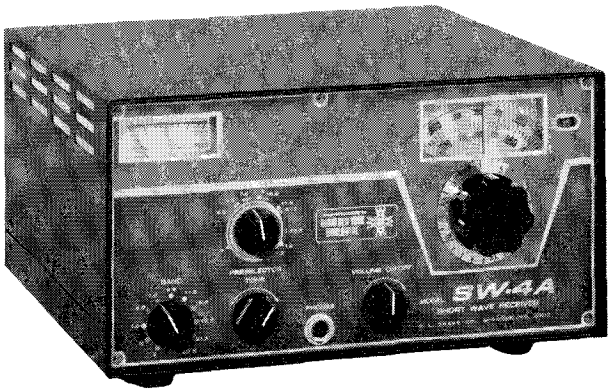
ADDR: United Nations, New York. Cable: Unations, New York. Te: Plaza 4-1234. Telex 222422 – **L.P:** Officer-in-Charge, Office of Public Information: J. Rolz-Bennett. R & Visual Services Div: Dir: J. d'Arcy. Deputy Dir: D. Ritchie. Chief of Operations & TV: M. Hayward. Chief of Radio: P. Jankowski. Mgr. Technical Operations: J. C. Nichols.
INT-SIG: Music Chime.



ANN: "This is the "United Nations". This introductory phrase is used in all official UN prgrs. in all of the languages concerned Message to listeners: The R. & Visual services Division is anxious to establish contact with as many listeners as possible and will gladly acknowledge all communications. Upon request, new correspondents are sent a prgr. sched. and some general information about the United Nations and the Specialized Agencies. Correspondence and requests for copies of the schedule of UN broadcasts should be addressed to the Director of the nearest UN Information Centre. These are located in Accra, Addis Ababa, Algiers, Asuncion, Athens, Baghdad, Bangkok, Beirut,

DRAKE SW-4A International Short-Wave Broadcast RECEIVER

DIRECT FREQUENCY DIALING:



No more guesswork in identifying stations. Set dial at a station's frequency and if conditions permit you'll hear it everytime...

FREQUENCY COVERAGE — .15—.5, .5—1.0, 1.0—1.5, 6.0—6.5, 7.0—7.5, 9.5—10.0, 11.5—12.0, 15.0—15.5, 17.5—18.0, 21.5—22.0, and 25.5—26.0 megacycles with crystals supplied. These frequencies cover European LF, American MF and International SW Broadcast Bands.

SELECTIVITY — 5 KC at 6 DB down and 16 KC at 60 DB.

I. F. FREQUENCIES — First I.F.—5645 KC crystal lattice filter, second I.F. —455 KC.

STABILITY — Less than 100 cycles after warm-up. Less than 100 cycles for 10% line voltage change.

SENSITIVITY — AM signal-to-noise ratio of 10 DB with less than 2 uv input signal modulated 30%.

MODE OF OPERATION — AM

DIAL CALIBRATION — Main dial (window) calibrated 0—.500 MC and .500 to 1.000 MC in 5 KC divisions. Vernier dial calibrated 0 to 25 KC in 1 KC divisions.

CALIBRATION ACCURACY — ±2 KC if dial is set to known frequency within the band.

AGC — Amplified delayed. 3 DB change in AF output with 60 DB change in RF input.

AUDIO OUTPUT — 2 watts at 5% H.D., 3 watts maximum.

AUDIO OUTPUT IMPEDANCE — 4 ohms and 8 ohms

ANTENNA INPUT — 52 ohms nominal

FRONT PANEL CONTROLS — Band Switch, Preselector, Tone, Volume/On-Off, Headphone Jack, and Main Tuning.

REAR CONTROLS & CONNECTIONS — S-Meter Zero, 120/240 Volt Switch, Speaker Connections, and Antenna Connections.

POWER CONSUMPTION — 30 Watts, 120/240 VAC, 50/60 Cycles.

DIMENSIONS — 5½" high, 10¾" wide, cabinet depth 11⅝", overall depth 12¼", weight 16 lbs.

ACCESSORIES — Models MS-4 Matching Speaker **and AL-4** Shielded Directional Loop Antenna for .5—1.5 MC.

FEATURES:

- Ultra-precision tuning dial accuracy
- Also accurately tunes standard AM Broadcast
- Crystal lattice filter for adjacent station rejection and good audio frequency response
- Dual conversion
- Solid state AF output gives low distortion and good frequency response
- S-meter for signal strength indication
- Preselector gives superior sensitivity by peaking antenna and RF stages
- Crystal-controlled H. F. Oscillator for same exceptional stability on all ranges
- Amplified AVC—gives constant AF output for all signal strengths

Prgr's from the United Nations are broadcast by st's in more than 100 countries and territories. The times of these broadcasts may be ascertained from local newspaper or from the stations concerned – R. st's in the US and Canada receive the prgr's direct by line from the Nations Headquarters or by recording – The R. and Visual Services Division prepares and distributes recorded prgr's in Amharic, Arabic, Duri, Dutch, English, French, German, Greek, Hebrew, Hindi, Indonesian, Italian, Persian, Polish, Portuguese, Pushtu, Russian, Serbo-Croat, Sinhalese, Spanish, Swahili, Tagalog, Thai, Turkish and Urdu.
Letters from Listeners are welcome.
New listeners are sent some general information about the United Nations upon request – Correspondence and request for particulars of the United Nations broadcasts from Headquarters should be addressed to: Radio and Visual Services Division, United Nations, New York.

be happy

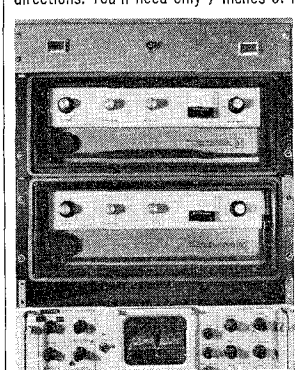
Today Microwave Associates all-solid-state TV relay is one of the most exciting equipment-innovations in the TV broadcast industry. Happy users abound. And for good reasons. It's reliable. Silicon-all-solid-state reliable. No klystrons, no high voltages. No tube failures, aging, or varying modulation sensitivity.

It's versatile. Use it rack-mounted or portable. Transmit high fidelity color over single or dual channels, in single or bi-directional relay. Hot or cold standby protection. 115 volt or 230 volt AC power, 12 or 24 volt DC power.

It's serviceable. Transmitter and receiver are of modular construction, have built-in metering, and all controls are mounted on front. Field experience shows that maintenance costs may be cut by as much as 80%.

The MA-2A and MA-7A relays, ***used as TV pickup,*** *provide versatile, fast reaction capabilities.* Receiver and transmitter include self-contained power supplies, and audio program multiplex. Yet the entire microwave relay link fits into a car, sets up in minutes . . . and you're on the air.

As a rack-mounted STL, use the MA-2A or MA-7A as a single or dual channel relay in one or two directions. You'll need only 7 inches of rack space for each unit. Run it with hot or cold standby.



There's no warm-up time needed, because there's not a single filament or high-voltage power supply in the entire relay system.

For multiple-hop intercity relay, put it on a mountain top . . . And forget it! An 80 ampere-hour watt battery will provide emergency standby power, and the use of *silicon semiconductors assures optimum life and reliability.* Both receiver and transmitter are encased in rugged, weather-resistant aluminum cases, rack or cabinet mounted.

All accessories are available, including tripods, pan heads, 2, 4, 6, 8, and 10 foot dishes, feedline, remote control monitors, automatic switchovers, fault alarm, plus special antennas for mobile van or helicopter use. The MA-2A and MA-7A series relay equipment follows EIA, CCIR, and FCC recommendations for both color and black & white television relay. In addition, complete documented recommendations tailored to your own particular application are available.

Want to be happy too? Write.

Model	*Band MHz*	*Nominal RF Power	Nominal RCVR Noise Figure without *preamp*	Nominal RCVR Noise Figure with *preamp*	*Allocation*
MA-2A	1990-2110	2 watts	10 dB	5 dB	TV Auxiliary broadcast STL, remote TV pickup, intercity relay
MA-7A	6875-7125	.5 watt	12 dB	5.5 dB	TV Auxiliary broadcast STL, remote TV pickup, intercity relay

Also available at other frequencies in the 1300 to 2300 MHz band for international allocation requirements.
*18 watt output TWT amplifiers available.

Television on VHF/UHF (Band IV/V) Europe and Africa.

VHF/UHF television systems for Band IV/V adopted by the European Broadcasting Conference Stockholm 1961 and by the African Broadcasting Conference, Geneva 1963 are 625-lines systems only. These can be grouped into 5 categories, here called Standards G to L:

Standard	Video Band-width (Mc)	Picture/Sound Separation (Mc)	Vestigial Sideband (Mc)	Picture modulation	Sound modulation	Frequency of chrominance subcarrier (Mc)	Powerratio picture/sound
G	5	5.5	0.75	Neg	FM	4.43	5:1
H	5	5.5	1.25	Neg	FM	4.43	5:1
I	5.5	6	1.25	Neg	FM	4.43	5:1
K	6	6.5	0.75	Neg	FM	4.43	5:1
L	6	6.5	1.25	Pos	AM	4.43	8:1

The sound carrier frequency for each channel can be determined by adding the appropriate figure to the vision carrier frequency given above (5.5Mc for systems G, H; 6Mc for system I and 6.5Mc for systems K, L). In We. Germany ch38 is reserved for aero-navigation.

UHF Channels: USA.

Lunar Orbiter photograph of the earth.

How do you fit into the picture?

A communications revolution is changing our picture of earth. Satellites, microwaves, laser beams and other laboratory miracles will soon make possible vast global television networks capable of carrying a live TV signal virtually everywhere on our planet. Space-age technology, wed to television, has already created a new horizon for the international advertiser.

More than 100 nations already have television. Of these, two-thirds have some form of commercial television system. Right now, leading international companies are using television in many nations with amazing success and efficiency.

The story of international television *today* is a story of unlimited opportunity. To help tell it, ABC International is touring a special presentation, "Television In The Space Age—The Challenge of Global Marketing," to key marketing centers around the world. Its message? That the miracle of global TV is with us now. To be used now. In one market or the world over.

ABC International is the hub of the Worldvision network, an association of commercial TV stations in 26 nations serving more than 20 million TV homes. For information on Worldvision—the new dimension in global advertising, phone or write today.

In broadcasting...

EMITELEVISION
looks forward to the future

EMITELEVISION plans, produces and installs complete television systems; everything from camera to aerial. Millions of viewers obtain better pictures from **EMI**TELEVISION aerials; much of the sound they hear is recorded on **EMI**TELEVISION professional tape recorders.

New **EMI**TELEVISION colour cameras are the most advanced of their kind, and thinking way ahead, are research teams, headed by some of the great names in broadcasting, dedicated to changing the whole pattern of television.

That is why **EMI**TELEVISION looks forward to the future.

The worlds' finest recording equipment ...by Westrex

There is only ever one best, and in the sphere of 16/35 mm photo/mag. studio recording and re-recording equipment, Westrex is the one. Westrex recording equipment is the result of detailed research and development, backed by many years of international experience in producing equipment for the world's finest studios. For example, Westrex equipment is installed at the BBC, Rediffusion television, and MGM Studios, in London: Bavaria Atelier, Munich: Cinetone Studios, Amsterdam: Valentin de Carvalho Studios, Lisbon.
More than thirty years in the lead has given Westrex Engineers all the answers.

During that time the Oscar for the best recording of the year has been won 27 times by films recorded on Westrex equipment. If you want the best it must be Westrex. Write today for full technical details of Westrex dubbing consoles, review room projection and sound equipment and the name of your nearest Westrex Agent.

an outstanding offering of quality entertainment for world-wide television broadcasting:

MARINE BOY: There's dramatic action, magic and excitement beneath the seas in this daring new series of 26 half-hour animated underwater color adventures.

NIGHT TRAIN: An exciting commercial showcase of 26 new one-hour variety programs that blend today's top rhythm and blues talent with the established stars of the recording world.

THE NUTCRACKER: A new one-hour Color TV Special produced by Bavaria Studios with music by the Philharmonic Orchestra of Budapest arranged by Franz Allers ("My Fair Lady") and featuring internationally acclaimed premiere dancers from the New York City Ballet, the National Opera of Stuttgart, the National Opera of Munich and the Royal Opera of Copenhagen. Colorcast as a Christmas TV Special on the CBS Television Network.

MAN IN SPACE: An exciting and timely series of six one-hour TV Specials (5 in color) of the incredible story of man in space, his trip to the moon and its consequences.

THE GYPSY ROSE LEE SHOW: New half-hour daily across-the-board interview program starring Gypsy Rose Lee and various famous guest celebrities including Judy Garland, Robert Goulet, Lee Remick, Arthur Fiedler and Diahann Carroll.

THE DISCOPHONIC SCENE: Jerry Blavat, the upcoming international teenage music idol hosts this variety show series. Superbly produced with a cast of 100 teenagers, it's 60-minutes a go-go with today's biggest teen music stars in the guest spotlight.

BEHIND THE SCENES WITH THE ROYAL BALLET: A beautiful new half-hour TV Special backstage with Rudolf Nureyev and Dame Margot Fonteyn.

26 BOSTON SYMPHONY CONCERTS: One-hour TV Concert Specials featuring the world renowned 104-piece Boston Symphony Orchestra and famous guest soloists. The concerts are conducted by Erich Leinsdorf, Charles Munch, Aaron Copland, William Steinberg and Richard Burgin.

OH, MY WORD: Famous guest celebrities such as Bob Crosby, Eartha Kitt, Pat Boone and Phyllis Diller try to determine which of four panelists is giving the correct definition to various wild and wacky words. One panel member knows the real definition, the others invent one. 26 very funny half-hours.

100 "OUT OF THE INKWELL" CARTOONS IN COLOR: New TV subjects produced by Max Fleischer, the creator of Popeye.

AVAILABLE IN CANADA ONLY

234 (ORIGINAL) POPEYE CARTOONS: Rated the very best TV cartoons. 114 available in color.

337 WARNER BROS. CARTOONS: Bugs Bunny, Porky Pig and all the other famous Warner Bros. characters. 311 in color.

191 LOONEY TUNES CARTOONS: Starring Porky Pig, Daffy Duck and their friends.
